PRE PLE SERIES(10) sets

NAME:.....

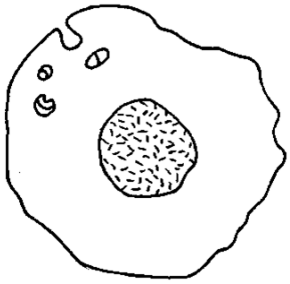

SCHOOL:.....

0780-438054 0708-438054

SECTION A: 40 MARKS

Questions **1** to **40** carry **one** mark each.

1. Name any **one** germ apart from protozoa.
   Virus//bacteria// fungi
   Reject names of viruses, bacteria and fungi
2. State the method of conserving soil moisture that involves the use of dry plant materials.
   Mulching
3. Give any **one** way in which mucus in the nose of humans is important during health improvement.
   Mucus traps dust that passes through the nose
   Mucus moistens the air
4. Write down **one** effect of rusting on metallic tools.
   Rusting weakens metallic tools//Rusting makes metallic tools blunt
   Rusting makes metallic tools look dull
5. State the milking method used by cattle keepers on large dairy farms.
   Machine milking **Reject hand milking**
6. Name the type of leaf venation possessed by plants with prop roots.
   Parallel leaf venation
   Reason:
   Prop roots are commonly found in cereal crops (which are monocots) especially during fruiting stage.
   Reject network leaf venation
7. Mention any **one** way fungi reproduce
   By means of spores//By means of cell budding
8. In the space below, draw the component of blood responsible for encircling and engulfing the germs in the body.

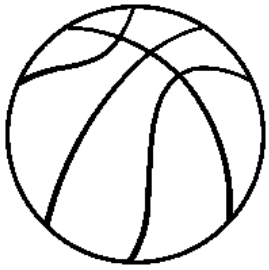

9. Mention the poisonous substance in tobacco that causes lung cancer.
   Tar
10. Give the adaptation of a cochlea to its function of converting sound vibrations into nerve impulses.
    It is coiled to increase the surface area for converting vibration into nerve impulses
    It has fluids for changing sound vibrations into nerve messages
11. Name the deficiency disease caused by lack of iron in the diet.
    Anaemia
12. State the role played by chlorophyll during the process of photosynthesis.
    Chlorophyll traps light energy//sunlight
13. Mention **one** method used to store sound.

Physical(mechanical)method, electromagnetic method, magnetic method

14. Give the importance of blubber found in animals like tortoise and dolphins.
Blubber keeps the above animals warm in the water
15. State any **one** way tobacco smoking can be a danger to pregnant women.
It leads to birth of underweight baby//It leads to miscarriage
It leads to still birth//It leads to premature
16. Give any **one** importance of suspension drying as a method of preserving hides.
It keeps the skin dry//It is cheap//It keeps the skin flat with no folds
17. Mention any **one** way in which NEMA promotes environmental protection.
Protecting swamps//Protects wetlands
Enforcing laws against swamp drainage
Sensitizing members about environmental management practices
18. Give **one** way a bean plant is similar to ferns.
Both have chlorophyll.
19. Mention **one** medical use of alcohol.
It is used to disinfect wounds//It is used to sterilize medical equipment
It is used as surgical spirit//It is used to mix some drugs

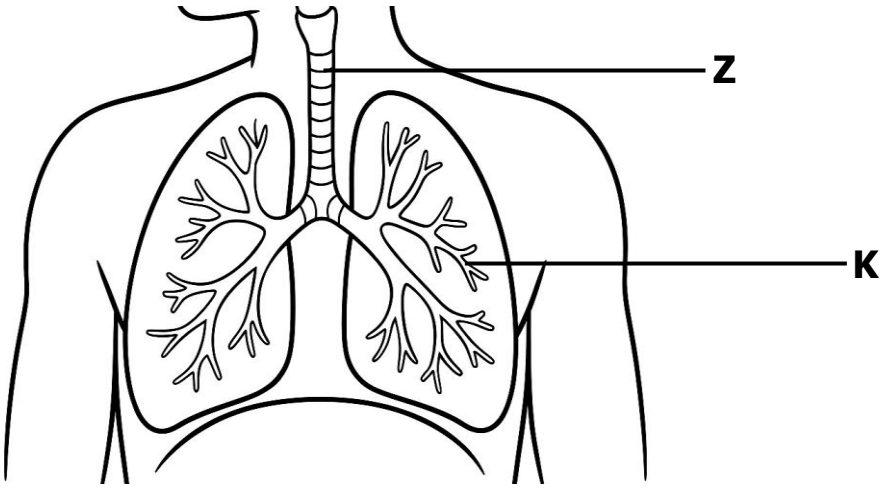

Study the diagram below and use it to answer question.

20. Give a reason why the above item float on water
The above item is less dense than water
21. Name the property of matter that is used to make the ball to be used during a match.
Matter exerts pressure
22. Mention the scientific name given to the substances blown away by wind.
Chaff
23. State the reason why vultures lack feathers on their heads.
To keep themselves clean when eating leftover flesh
24. Give the similarity between a tadpole and a fish in the way they breathe.
Both a tadpole and a fish breathe through gills
25. Mention the substance produced by snails to reduce friction during movement.
Slime
26. Apart from banana, give any other plant propagated by using suckers.
Sisal//pineapple// aloevera,
27. Give **one** way gastric juice is useful during digestion of food in the stomach.
It kills germs that come along with food
It provides acidic conditions for enzymes breaking protein to work
It stops the action of salivary amylase
Mixes food with digestive enzymes //Helps in breaking down proteins

28. Mention the part of a worker bee which helps it to balance during flight.
Halteres
29. State the reason why handles of frying pans made of wood.
To prevent the users hands from getting burnt//To prevent burns
30. Mention the element of primary health care that enables the mother's body to rest.
Family planning

The diagram below shows a body system, study it and answer questions **31** and **32**.

31. Name structures marked **K.**
Alveoli/ air sacs
32. Mention the substance that keeps **Z** open all the time.
Rings of cartilages/ cartilages
33. State **one** disadvantage of seed dispersal.
It increases the growth of weeds
It may increase pests and diseases in an area
34. Apart from hearing, give any other function of the human ear.
For body balance
35. Mention the method used to separate sugar and iron filing.
Use of a magnet **Reason: Iron filings are magnetic substances**
36. Mention the first step in food production.
Land preparation.
37. Name the part of a vacuum flask that prevents matter from entering the vacuum.
Vacuum seal
38. Give **one** way the use of fire blanket help to stop fire.
The fire blanket cuts the supply of oxygen to stop burning
39. Mention the element of weather during which gumboots are needed.
Rainfall
40. Name the part of a bean seed that develops into a new plant.
Embryo

SECTION B: 60 MARKS

41. (a) Write **PHC** in full.
Primary Health Care
(b) Mention **one** principle of PHC
Full community participation//Total health for all

Health services should be available//acceptable
Health services should be affordable
Health services should be accessible

(c) State **two** ways of promoting immunization as an element of PHC.

Taking children for immunization
Observing national immunization days
Singing songs about immunization
Reciting poems about the importance of immunization
Through drama//plays about the importance of immunization

42. (a) Give **one** group of crops you know

Annual crops/ perennial crops

(b) Name the group of crops to which maize and millet belong

Annual crops

(c) Give a reason to support your answer given in 42(b) above.

They take less than one year to mature
They complete their life cycle in less than a year

(d) Name the food value obtained from eating maize

Carbohydrates

43. (a) State **two** reasons why amphibians lay many eggs

To increase chances for fertilization//Some eggs are eaten by predators

(b) Mention the limbless amphibian

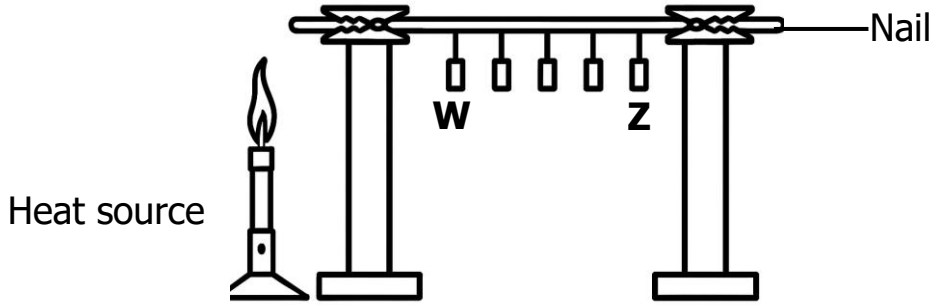

Caecilians

Reject frogs/toads/newts/salamanders **Reason: They have legs**

(c) State the differences between a frog and a toad in terms of movement

A frog moves by leaping while a toad moves by hopping

44. The diagram below shows pieces of fats put on the pin and heated. Study and use it to answer the questions.

(a) Identify the method of heat transfer demonstrated using the about experiment.

Conduction

(b) Give a reason why the piece of fat marked **W** fall first as shown in the experiment above

Fat W receives heat first

(c) Name any **two** effects of heat on the pieces of fat used in the experiment above

Heat causes melting of pieces of fat

Heat increases the temperature of pieces of fat.

45. Complete the table below by filling in the missing information

Vector	Germ	Disease
Housefly	**Bacteria**	Cholera
Tiger mosquito	Virus	Yellow fever
Rat flea	Bacteria	**Bubonic plague**
Tsetse fly	**Protozoa**	Sleeping sickness

46. (a) Nalubega went to Mulago hospital when feeling headache. She was given drugs bearing "ampiclox" **2×4** and took 2 tables at 12:00am. The medicine had MFD 10/04/2021 and best for use after 3 years

(b) State name given to instructions guiding Nalubega to use the medicine effectively.

Drug prescription

(c) Give **one** importance of the above instruction to Nalubega.

It prevents Nalubega from taking wrong drugs (overdose/ underdose)

It enables Nalubega to take the right dose of drugs.

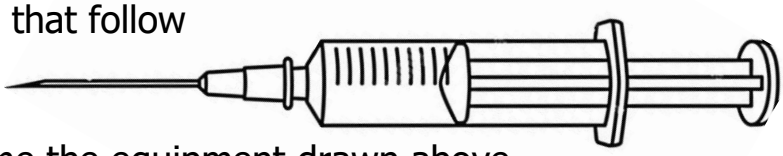

(d) State the time of the day Nalubega is expected to take the second dosage

At 12:00 noon

(e) Write down the final date, the medicine will be out of use.

10/04/2024

47. The diagram below is an equipment used on a cattle farm. Study it and answer questions that follow

(a) Name the equipment drawn above

An inseminating syringe

(b) Mention the type of insemination when the above equipment is used

Artificial insemination

(c) Give the situation that makes a cattle farmer to call a qualified inseminator

Heat period

(d) State the importance of a switch to a cow

It enables the cow to chase disturbing flies

48. (a) Give the meaning of the term a resource

Resources are things in the environment that people use to satisfy their needs

(b) Mention **two** ways how renewable resources can be replaced naturally

Through water cycles e.g. water

Through reproduction e.g. plants and animals

(c) State the method used to separate petroleum products

Fractional distillation

49. (a) Name the method of soil formation where rocks break down into small particles.

Weathering of rocks

(b) Mention the importance of sand to a cook in preparation of safe food.

Sand soil is used by cooks to clean saucepan

(c) State the adaptation of sand soil that makes it suitable for making glasses.

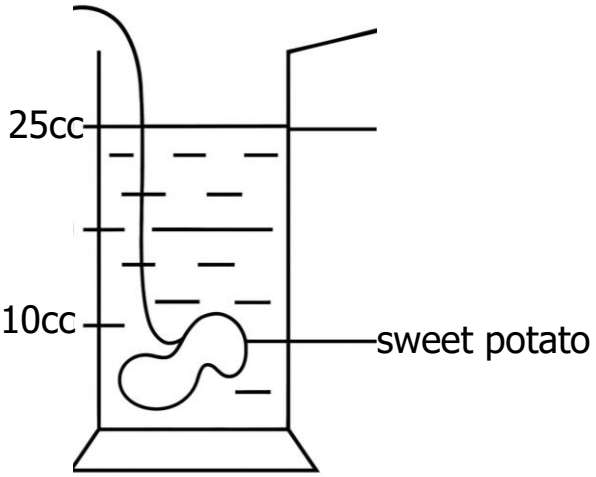

Sand soil contains silica

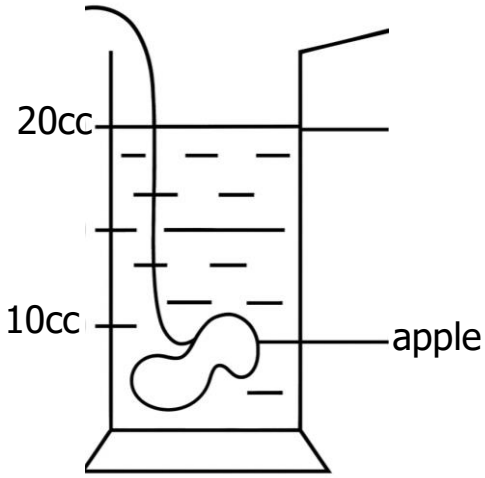

(d) State the role of the sun in the water cycle.

The sun rays cause evapotranspiration

Accept: evaporation and transpiration

50. Study the diagrams below answer questions that follow.

(a) Of the two objects, identify the object which occupied a bigger space.

(03 marks)

Volume of a sweet potato
2nd level- 1st level
25cc- 10cc
15cc

volume of the apple
2nd level- 1st level
20cc- 10cc
10cc

Sweet potato

Reject without calculation

(b) Give a reason to support your answer.

Sweet potato displaced more water than the apple

51. (a) Give the meaning of the term **food**.

Food is anything taken into the body that has nutritional values

Also accept (Food is anything taken in the body to nourish it)

(b) Mention the source of food made by the help of nitrogen.

Plants

(c) Mention the deficiency disease caused by lack of protein in the diet.

Marasmus

(d) State the food value obtained from eating fish.

Proteins

52. (a) State the importance of the following weather instruments.

(i) Anemometer

It measures the speed of wind

(ii) Thermometer

It measures the temperature

(b) Give **one** reason why dew is formed at night.

There are low temperatures at night that lead to condensation

(c) State the role of the sun during water- cycle

The sun rays cause evaporation in water bodies and transpiration in plants

Also accept:
(The sun rays cause evapo- transpiration)

53. The table below shows animals and the products they provide to human beings , pair them correctly;

LIST A	LIST B
Goat	Mutton
Rabbit	Chevon
Cow	Fur
Sheep	Beef

Goat - Chevon
Rabbit - fur
Cow- beef
Sheep- mutton

54. (a) Name the type of mechanical energy possessed by a rolling stone.
Kinetic energy
Reason: it is moving
(b) Give **two** factors that affect the type of mechanical energy mentioned in (a) above.
Weight of the object//Height of the object
(c) Give **one** reason why sound is considered to be a form of energy.
It has ability to do work//Makes work possible
It can be changed to other forms of energy

55. (a) Name the part of the body that aids respiration to take place.
Body cell
(b) State what happens to the following during exhalation.
(i) Ribs:
They move downwards and inwards
(ii) intercostal muscles.
External intercostal muscles relax during exhalation.
Internal intercostal muscles contract during exhalation, helping to pull the ribs downward and inward.
(c) Mention the respiratory disorder caused as a result of uncontrolled movement of the diaphragm.
Hiccup (also accept hiccups)

END
