MID TERM 1 EXAMS 2026

NAME:.....

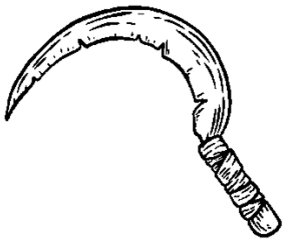

SCHOOL:.....

0780-438054 0708-438054

SECTION A: 40 MARKS

Answer **all** *questions in this section*
Questions **1** *to* **40** *carry* **one** *mark each*

1. Mention the type of soil that contains silica.
   Sand soil
2. A duck is a swimming bird. Give **one** way it is adapted to swimming in water.
   They have webbed feet that enables them to swim in water
   They have webs used for paddling in water.
3. Give **one** similarity between burns and scalds.
   Both are skin injuries caused by heat
4. Name the part of a living house that works like a chimney in a kitchen.
   Ventilator
5. Name the body sense used to detect temperature.
   Feeling
6. State any **one** way in which wind is used as a resource in our daily lives.
   Wind is used as in winnowing crops/Wind is used for drying clean clothes
7. Babirye and Nakato were born on 31/03/2025. State the date they received BCG vaccination.
   On 31/03/2025.
8. Name any **one** liquid that can float on water.
   Oil, Kerosene
9. Mention the gas in the environment whose percentage is 0.97%.
   Rare gases
10. In the space below, draw the garden tool used for harvesting cereals.

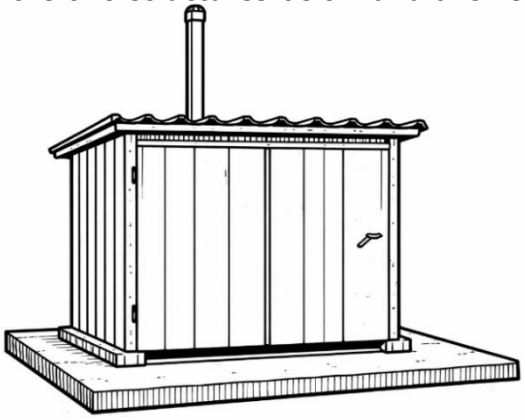

11. Name the part of a passion fruit needed to climb others.
    Tendrils
12. Give the best way Christine, a P.7 child, can protect herself from getting HIV/AIDS. **Abstinence from pre-marital sex**
13. Mention the accident in which the first aid given is a kiss of life.
    Near drowning
14. State the way in which arteries prevent the backflow of blood.
    They carry blood flowing with high blood pressure from the heart.
    They have thick walls that maintain high pressure of blood which keeps blood moving forward.
15. State the difference in units between weight and mass.
    Weight is measured in newtons while mass is measured in grammes/kilogrammes
16. Mention the term used to mean the introduction of harmful substances into food, making it unsafe for eating.

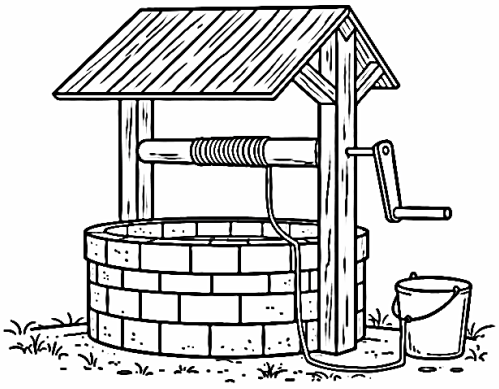

Food contamination

17. Give the waste management strategy that involves total elimination of waste.
Reject// Refuse
18. Give **one** role of a first aider.
To assess the situation//condition of the casualty
To assist the casualty as soon as possible.
To remove the casualty from the accident scene
To take the casualty to the hospital //To identify the ABC's or 3Bs
19. State **one** piece of advice you would give to Nadia, a layer poultry farmer, to enable her birds lay hard-shelled eggs.
To feed her layers on feeds rich in calcium
20. Give any **one** reason why farmers prefer propagation of crops using marcotting to planting seeds.
Marcotted plants take short time to bear fruits.
Marcotted plants get food from the parent plants.
Marcotted plants grow and mature faster.
21. Give any **one** protozoan cattle disease spread by ticks.
East Coast fever//Red water disease
22. Mention the body process that takes place in living body cells.
Respiration
23. State the reason why builders put a damp proof course when constructing poultry houses.
To prevent water from seeping into the wall.
To prevent dampness in the poultry house.
24. Give any **one** example of a liquid solution.
A uniform mixture of salt and water
A uniform mixture of sugar and water.
25. Give a reason why Mr and Mrs Masaba are advised to go together for gonorrhea treatment. **To prevent reinfection**

Study the two structures below and answer question **26** and **27**.

A

B

26. Identify the recommended distance between structures **A** and **B**.
30 metres
27. State a reason why distance between the two structures is of that dimension.
To prevent water contamination by human wastes.
28. Give **one** reason why the government of Uganda is encouraging people to use solar energy as a clean source of energy.

Solar does not produce smoke that pollutes the environment.

29. Given **Saanen, Alpine, Friesian** and **Angora goats**. Identify the odd one out based on their value.

    Angora goat

30. Give a reason to support your answer in 29 above.

    Angora goats are kept for mohair, while the others are dairy breeds.

31. Name the group of musical instruments to which tube fiddles belong.

    String musical instruments

32. Mention the digestive disorder prevented by eating the right amount of food, chewing food properly before swallowing and eating food with low fat content. **Indigestion**

33. State any **one** reason why vaccines are handled in a cold chain.

    To prevent them from getting spoilt/To maintain/preserve their strength.

34. State the gestation period of a sow.

    3 months 3 weeks 3days

35. Give a reason why water obtained by distillation is not recommended for drinking.

    It lacks mineral salts needed in the body.

36. State **one** way in which respiration in a fish is similar to that in a tadpole.

    Both breathe through gills.

37. Name the special vehicle used to empty a septic tank.

    Cesspool emptier

38. Mention any **one** service provided to pregnant mothers during antenatal care. **Immunization Guidance and counselling Treatment HIV testing**

39. Fill in the missing step in the cleaning of clothes:

    Washing, rinsing, **wringing**, drying

40. Mention **one** living agent of seed dispersal.

    Animals

SECTION B: 60 MARKS

Answer **all** *questions in this section*

Questions **41** *to* **55** *carry four marks each*

41. (a) Identify any **one** disease that results from active smoking.

    Lung cancer//Emphysema

    (b) Give **one** reason why people smoke.

    To pass time //To fit in peer groups //Due to boredom.

    (c) Name any **two** life skills that can safeguard against smoking.

    Peer resistance// Assertiveness //Self-esteem //Self-awareness.

42. The graph below shows the rate of transpiration of a banana plant at different times of day. Use it to answer questions

(a) Determine the time of the day at which the rate of transpiration was highest.
12pm

(b) Give the reason why the rate of transpiration was highest at the above time. **There is much sunshine at 12pm which increases transpiration**

(c) State any **one** factor that may have caused the reduction in the rate of transpiration after 3pm.
Less sunlight Lower temperature Closing of stomata

(d) Give **one** importance of transpiration to plants
It helps in cooling the plant
It helps plants to absorb water and minerals.

43. A mango was placed on a plate and left outside in the sun for three days. On the third day, the mango had become soft, had black spots and flies were seen around it.

(a) Name the process that took place in the mango.
Rotting/decaying

(b) Give one sign that shows the mango underwent the above process.
Bad smell//Softness//Presence of flies

(c) Name any **one** organism that aided the process mentioned in (a) to take place.
Bacterial Fungi

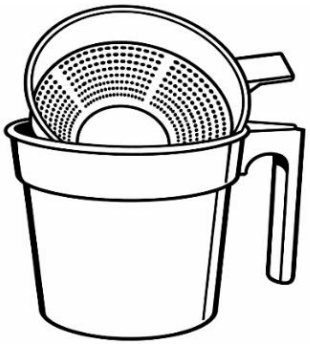

(d) State any **one** way in which fruits can be prevented from undergoing the process mentioned in (a).
Drying/dehydrating them//Storing them in cool places
Storing them in a fridge

44. (a) Mention any **two** activities done to keep the body clean.
Bathing regularly //Brushing teeth every after a meal

Regular dental flossing //Regular removal of wax from the ears.
Regular removal of long fingernails and toenails

(b) Give any **two** effects of failure to keep the body clean.
It leads to bad body smell //It leads to skin diseases
Leads to teeth decay//teeth diseases.
Creates hiding and breeding places for germs.
Leads to partial deafness due to much wax in ears

45. The diagram below shows some equipment found on a cattle farm. Use them to answer the questions that follow.

(a) Name the equipment shown above.
Strip cup

(b) Mention the type of cattle where the farmer is likely to use the above equipment. **Dairy cattle**

(c) Briefly explain how a lactometer works. (02 marks)
A lactometer floats higher in pure milk but sinks if water has been added or if some fats have been removed.

46. (a) State the difference between music and noise.
Music is the organised sound with regular vibration while noise is the disorganised sound with irregular vibration.

(b) Give **one** way of varying the pitch produced by a whistle.
By altering /changing the force applied while blowing.

(c) Give **one** way the following groups of people use reflected sound.
Sailors: **For determining the depth of water bodies**
Fishermen: **For locating shoals of fish in waterbodies**

47. (a) Give the meaning of the term "**mulching**"
Mulching is the covering of top with dry plant materials.

(b) State any **one** advantage of mulching the garden.
Mulching conserves moisture in the soil
Mulching improves soil fertility
Mulches control the rapid growth of weeds.

(c) Give **one** reason why it is not advisable to mulch some crops like cassava.
Some mulches hide pests that destroy cassava

(d) Mention **one** reason why mulch is dried before being used in the garden.
To prevent them from developing into weeds.

48. The table shows different types of dispersal in **A** and their examples in **B** but in a wrong order

A	B
Wind dispersal	castor oil
Water dispersal	dandelion
Animal dispersal	black jack
Self dispersal	lotus

Match correctly the types of dispersal in **A** to their examples in **B**.

Wind dispersal **dandelion**

Water dispersal **lotus**

Animal dispersal **black jack**

Self dispersal **castor oil**

49. (a) Give any **one** example of each of the following organisms.

Crustaceans:

crab/lobster/woodlice/shrimps/cyclops/prawn/sand hopper

Myriapods: **millipede, centipede**

(b) Mention the group of invertebrates to which a spider belongs.

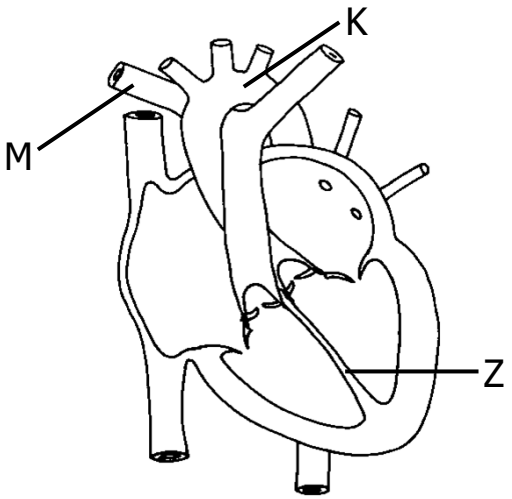

Arthropods

(c) Give a reason why a scorpion is different from other arachnids.

A scorpion reproduces its young ones alive while other arachnids lay eggs

They have a segmented tail with a stinger, which other arachnids like spiders lack

50. Study the diagram of the human heart and answer the questions that follow.

(a) Name the blood vessel marked with **K**.

Aorta

(b) State the function of part marked **Z**.

It prevents deoxygenated blood from mixing with oxygenated blood.

It separates the left side from the right side.

(c) Give a reason why blood vessel **M** is called an artery.

It carries blood away from the heart.

(d) State any **one** way in which the volume of blood can be increased in the human body.

By taking iron supplement tablets //Through blood transfusion. Feeding on food rich in iron. Drinking plenty of fruit juice and water regularly.

51. (a) State the chemical change that affects metallic objects made out of iron. **Rusting**

(b) Give a reason why an iron nail does not change colour when kept indoors, even though oxygen is present.

There is absence of moisture that support rusting.

(c) State **one** importance of the change mentioned in (b) above.

It adds iron in the soil

(d) Give **one** danger of the change mentioned in (b).

It weakens metals // Causes wear and tear of metals

It makes metals blunt// Creates holes in some metals

Reject: ~~It makes metals to look dull~~

52. (a) Name the type of weather in which children are advised to take off their sweaters.

Sunny

(b) Apart from showing the strength of wind, give any **one** importance of a windsock at a weather station.
A windsock shows direction of wind.

(c) State **one** importance of rain to cattle farmers in your community.
It provides water to cattle farmers for their animals
It provides water to support growth of grass for cattle farmers.

(d) Mention the weather instrument which uses millimetres.
Rain gauge.

53. (a) Mention the term used to describe the attachment of an embryo onto the walls of the uterus. **Implantation**

(b) Name the important process that takes place in the fallopian tube besides fertilization. **Conception**

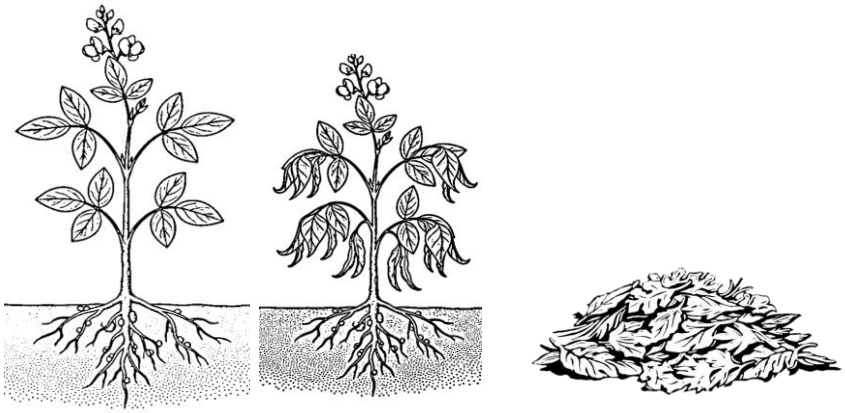

(c) Mention **two** disorders of the female reproductive system.
Miscarriage//Fibroids //Sterility// Still birth //Blocked oviduct

54. (a) Give **one** product got from keeping sheep apart from mutton.
Wool/fleece

(b) Mention any **two** local breeds of sheep kept for mutton.
Blackhead Persian sheep//Masai sheep//Somali sheep

(c) Give a reason why sheep's shed should be constructed with slanted floor.
To allow easy flow of urine from the floor
To allow easy flow of water to the ground during scrubbing.
To make cleaning of the sheep shed easy

55. The diagrams below show the formation of manure. Use it to answer questions that follow.

A bean **Wilting** **Manure**

(a) Name the organic fertilizer obtained in the diagram above.
Green manure

(b) State the reason why legumes are used making the above organic fertilizer.
Legumes have high nitrogen content

(c) Give a reason why the flowering stage of legumes is suitable for making the type of organic fertilizer in (a) above.
They still contain nitrogen and have enough biomass for decomposition.

(d) Apart from green manure, give any other **one** example of organic fertilizer. **Farmyard manure//Compost manure //Organic manure**

END
