TURN OVER

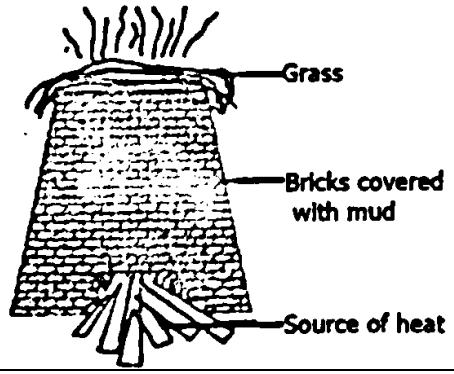

SECTION A (40 MARKS)

NO	RESPONSE AND RELATED CONTENT	K.C.A (QUESTION LEVELS)
1	Name the part of a male reproductive system which stores sperms. Epididymis Related content Reproduction is the process by which living things multiply by giving rise to off springs. Types of reproduction (a) Sexual reproduction Is the type of reproduction which involves the union of male and female gametes. (b) Asexual reproduction Is the type of reproduction which does not involve the union of female and male gametes. Examples of asexual reproduction -Binary fission -Sporulation -Vegetative propagation Growth and development in human beings Growth is the permanent increase in size of a person. Primary sex organs in both males and females (a) Male – Testes (b) Female – Ovaries Primary sex changes in adolescents (a) Adolescent boys -Testes and penis enlarge. -Wet dreams begin. -Production of sperms begin. (b) Adolescent girls -Ovulation begins. -The uterus walls mature and thicken. -Menstruation period begins.	K

<table>
<tr>
<td>2</td>
<td>Mention any one indicator of poor sanitation in our environment.
-Bushy compound.
-Poor disposal o faeces.
-Domestic wastes.
-Rubbish spread all over.
-Dusty classrooms.
-Littered compound.
-Pools of water in the compound.
-High number of house flies in the compound.
Related content
Sanitation: Is the general cleanliness of the environment.
Ways of promoting sanitation
-Mopping classrooms.
-Draining stagnant water.
-Scrubbing verandas and floors.
-Proper disposal of rubbish.
-Smoking latrines.
-Dusting tables and chairs.
-Proper disposal of human wastes.
-Flashing toilets after use.
Elements of a clean home and their importances
<table>
<tr><th>Elements</th><th>Importance / Use</th></tr>
<tr><td>Plate Stant / Rack</td><td>-For drying of utensils and cutlery.
-Prevents utensils and cutleries from being dirtied by dust.</td></tr>
<tr><td>Clean latrines / Toilets</td><td>For proper disposal of human wastes.</td></tr>
<tr><td>Rubbish pit / Dust bin</td><td>For proper disposal of rubbish.</td></tr>
<tr><td>Tippy tab / hand washing facility</td><td>For washing hands after visiting the toilets / latrines.</td></tr>
</table>
</td>
<td>K</td>
</tr>
<tr>
<td>3</td>
<td>Write any one reason why farmers plant some seeds in a nursery bed.
-To allow proper care for the seedlings.</td>
<td>C</td>
</tr>
</table>

	-To protect seedlings from harsh weather conditions. -To protect prevent wastage of seeds. Related Content A nursery bed is a small garden prepared for raising seedlings before transplanting. Activities done when preparing a nursery bed. -Site selection. -Adding fertilizers. -Clearing land. -Constructing the shade. -Digging. -Hallowing. Ways of caring for seedlings in a nursery bed -Watering seeds. -Regular weeding. -Spraying seedlings. -Fencing the nursery bed. -Thinning.	
4	Give the factor which enables nectar suckers to feed on nectar. They have long slender beaks for sucking nectar from the bottom of flowers. Related Content Examples of nectar suckers -Sun birds -Humming birds Importance of nectar suckers to a farmer -They help in pollination of farmer's crops. Flightless birds These are birds that are unable to fly. Reasons why flightless birds cannot fly They have small and weak wings. Examples of flightless birds -Ostrich -Emu -Kiwi -Rhea -Penguin -Kassowarg Reasons why birds fly -To look for food. -To look for mates. -To look for protection.	A

	Reasons why birds are able to fly -Their fore limbs are modified to form wings. -They have light feathers on their wings. -They have strong pectoral muscles for moving wings during flight. Importance of birds -Birds like chicken provide meat and eggs. -Birds like sun birds help in pollination of flowers. -Birds like vultures help in cleaning the environment by feeding on abndoned flesh.	
5	State the reason why cow dung should not be put on a burnt or scald part of the body. Cow dung attract germs to the wound. Related Content Precautions against burns and scalds Reasons why cooking oil should not be applied on an injured part Cooking oil causes infection. Reasons why sugar should not be applied on an injured part Sugarattracts bacteria and absorbs water from the skin. Reasons why injured parts by scalds or burns should be dipped in clean cold water -To cool temperature around the injured part. -To reduce further damage on the skin tissues. How to prevent burns and scalds -Use insulators to carry hot objects. -Cook from a raised place. -Put all fire out after use. -Avoid leaving burning candles. -Keep flammable liquids away from fire.	A
6	Mention the type of immunity obtained by babies from their mothers. Natural immunity	K

	The diagram below shows firing bricks in a kiln. Study and use it to answer questions 7, 8 and 9.  	A
7	Name the source of heat energy used in firing the bricks above. Fire wood	K
8	Give any one reason why mud is used to cover the bricks before firing begins. -Mud reduce heat loss by convection. -Mud controls oxygen supply to the bricks.	C
9	Mention the importance of grass put on top of the kiln during firing. -Grass shows that the bricks have been fired / burnt. -Grass show that fire reached the top. Related content Ways in which heat transfer by convection is important -It removes bad smell from latrines. -It drives smoke from the kitchen or factory. -It helps in lighting iron boxes and candles. Human activities that requires the presence of convection -Firing bricks -Charcoal burning -Boiling water	A
10	State any one reason why banana suckers are planted in winder pits. -To prevent over-crowding of suckers. -To create large surface area for trapping water for proper growth of suckers. -To ease expansion and penetration of roots. Related content Reasons why banana suckers are planted after their roots and leaves are cut	C

	-Leaves are cut off to reduce the rate of transpiration. -Roots are cut off to remove hiding places for pests e.g. nematodes.] -Roots are cut off to promote the growth of new health roots. -Roots are cut to ensure a clean sucker is planted.	
11	In which one way can HIV positive mother protect her unborn baby from getting HIV / AIDS? -Mother should take niverapy drugs. -Mother should take ARVS -Mother should give birth in hospital under the super vision of health workers. Related content Reasons why it is easier to prevent AIDs than malaria It is easier to obtain AIDS/ HIV through sex than mosquito bites. Reasons why a person suffering from malaria dies faster than the one suffering from HIV/AIDS Malaria destroys red blood cells while AIDs make white bloods cells weak. Reasons why female anopheles mosquito cannot spread HIV/AIDS -HIV is destroyed in its abdomen. -HIV cannot survive for long outside human blood.	A
12	Give the meaning of the term seed dispersal. Seed dispersal is the scattering of seeds from the parent plant to other areas. Related content Mechanism /Types / Modes of seed dispersal Wind dispersal Wind dispersal is the scattering of seeds from the parent plant to other areas by means of wind. Examples of seeds dispersed by wind -Tridax -Silk cotton -Dandelion -Maple -Jacaranda -Phyllon -Orchid -Poppy Characteristics of seeds dispersed by wind -They are small and light. -They have feathery structures. -Seeds are enclosed in fruits which have parachute-like structure. Water dispersal	K

	Water dispersal is the modes of scattering seeds from the parent plant to other areas by means of water. Examples of seeds dispersed by water -Coconut -Water lily -Lotus and Cattail Characteristics of seeds dispersed by water -Their mesocarp has air spaces. -They are light to float on water. -They have spongy mesocarp. -They hollow mesocarp.	
13	Write any one sign and symptom of rabies in humans. -Barking like a dog. -Excessive salivation. -Difficult in swallowing. -Muscle weakness. -Fear of water. -Paralysis in severe cases. Related content Ways of preventing rabies in humans -Vaccinate dogs and cats. -Avoid body contact with infected dogs or cats. -Seek immediate medical care if bitten by a dog. -Kill the infected dogs or cats.	C
14	In which part of female reproductive system does implantation take place? Uterus / womb Related content Functions of parts of the female reproductive organ Ovaries -They produce ova. -They produce Oestrogen and progesterone hormones. Note: Oestrogen prepares the uterus for implantation. Oviduct	K

	-It transports sperms from the epididymis to the urethra. Uterus / Womb It is where implantation takes place. Cervix -It closes the uterus during pregnancy. -It prevents the foetus from coming out before it's time. Vagina -It is where copulation takes place. -It is the passage for the baby during child birth.	
15	Give the reason why sand soil is not suitable for crop growing. -Sand soil contains less humus. -Sand soil dries very quickly. Related content Characteristics of sand soil -It has large inter-particle spaces. -It has high water drainage. Reasons why sand soil has a high water drainage It has large inter-particle spaces. Reasons why sand soil is said to have the lowest water retention capacity It has loosely large particles. Reasons why sand soil aeration rate It has larger air space between its particles.	C
	The diagram below shows a glass container into which water and cooking oil were poured. The two liquids settled as shown below. Study and use it to answer questions 16, 17 and 18.  	
16	Name the liquid represented by letter X. Water	K

17	State the reason why liquid N settled on top of liquid X. Liquid N is lees denser than liquid X.	C
18	Mention the method which can be used to separate the two liquids above. Using a separating funnel Related content A mixture: A mixture is a condition of two or more substances which can be separated by physical process. Note: The feelers/ antennae work like human ear, lateral line of fish, nostrils, human skin, nose and tentacles of snail. Examples of mixtures -Air -Alloys -Solution -Emulsion Types of mixtures -Solid mixtures -Liquid mixtures -Solids and liquid mixtures Liquid mixtures: These are mixtures obtained by combining two or more liquids. Examples of liquid mixtures -Water and paraffin. -Water and alcohol. -Water and oil. Methods of separating liquid mixtures Using a separating funnel. This method is used to separate mixtures of immiscible liquids. Examples of liquids which are separated by a separating funnel -Water and oil. -Water and mercury. -Water and diesel.	C
19	Mention any one advantage of pruning crops in the garden. -It enables crops to grow well. -It enables crops to get enough sunlight. -It reduces the weight of crops.	C

	-It reduces hiding places for crop pests. -It creates space for other management practices like spraying. Related content Mulching is the covering of top soil using dry plant materials. Note: The dry plant materials are called mulches and they are the one used for mulching the garden. Examples of mulches -Dry grass -Dry banana leaves -Dry coffee husks -Dry cereal stalks Advantages of mulching Mulching controls soil erosion. Ways how mulching is able to control soil erosion -Mulches reduce the speed of flowing water. -Mulches trap soil from flowing with water. -Mulching improves soil fertility. Ways how mulching conserve moisture in the soil -Mulches minimize the rate of evaporation of water in the soil. -Mulches control the growth of weeds. Ways how mulching control the growth of weeds Mulches cut off the supply of sun light.	
20	Write any one way of harvesting rainfall water in our environment. -Roof top rainwater harvesting. -Surface run off harvesting. Related content Plants are renewable resources because they can be replaced naturally through reproduction. Ways in which plants can be used as resources -Plants are source of food to people. -Plants are source of herbal medicine e.g. aloe vera. -Plants are source of wood fuel. -Plants provide fibres. Ways in which plants are used to support human life -Plants are source of food.	C

	-Plants are source of herbal medicine. -Plants provide oxygen for respiration.	
21	State the reason why distilled water is not safe for drinking. Distilled water lacks mineral salts. Related Content Reasons why the following kind of water is not safe for drinking -Decanted water: It still contains germs. -Filtered water: It still contains germs. Reasons why boiling is said to be the best method of making water safe for drinking Boiling kills all the germs in water. Uses of distilled water -It is used in laboratory. -It is used for cleaning wounds. -It is used for mixing medicines in hospitals. -It is used in steaming irons to prevent mineral build up. -It is used for cleaning medical equipments.	C
22	In which one way is sun useful to a crop farmer? -Sun provides heat for drying harvested crops. -Sun helps in drying harvested crops. -Sun heat enables plants to make their own food. Reject the following since the question only required how sun help the crop farmer. -Sun's heat help to dry clothes. -Sun's heat help to generate solar electricity. Related Content Activities done by farmers during dry season -Harvesting crops -Sun drying crops -Drying wet clothes -Watering crops -Skate boating -Mulching Dangers of too much sunshine -It causes srops to wither and dry dry up. -It causes water sources to dry up. -It dries up pasture foranimals.	A

	-It causes drought. Ways of managing sunny weather -Wear hats and sun glasses. -Drink plenty of boiled water. -Use fans and air conditioning to cool indoor spaces.	
	The diagram below shows a hand washing facility. Study it and answer questions 23 and 24. 	
23	Name the hand washing facility shown above. A tippy tap / Tippy tap.	
24	In which one way does the above facility help to control diarrheal diseases? -It helps to remove germs from the hands through washing. -It promotes hand washing with soap. -It prevents contamination. -It reduces the spread of disease-causing germs. Related content Ways of promoting sanitation -Mopping classrooms. -Sweeping the compound. -Smoking latrines. -Washing toilets. -Proper disposal of human wastes. Sanitation is the general cleanliness of the environment.	
25	Give the reason why we should put a hard material in the mouth of a convulsing victim. To prevent a victim from biting the tongue. Related content Convulsion: Is the rapid uncontrolled shaking of the body.	C

	Signs and symptoms of convulsion -High body temperature. -Violent shaking. -Frequent urination. -Excessive sweating. -Bubbles of saliva in the mouth. How to prevent fever and convulsion -Early treatment of infection. -Controlling mosquitoes. -Immunizing children. -Maintaining proper body hygiene.	
26	In which one way is the use of thermos flask help to conserve the environment? Thermos reduce the rate at which trees are cut for fuel in boiling liquids.	A
27	Write any one cause of near drowning in our communities. -Flooding in the area. -Capsizing of boats due to rain storms. -Failure to swim. -Inability to swim. -Muscle pull while in water. -Being drunk while in deep water. Related content Near drowning is the condition in which one's lungs are filled with water that leads to failure to breathe but not yet dead. First aid for near drowning -Yell for help from people around. -Pull the casualty from water in case you are able. -Apply mouth to mouth breathing. (Kiss of life) Note: Kiss of life opens up air ways to restore breathing / induces breathing.	C
28	In which one way is draining away of stagnant water control the spread of malaria? It destroys the breeding grounds for mosquitoes that spread malaria. Related content Characteristics that make mosquitoes suitable vectors	A

-They have sharp proboscis for sucking blood.
-They feed on human blood.
-Germs survive in their bodies.

Types of mosquitoes and the disease they spread.

No	Mosquito	Disease	Germs	Body organ / part affected
1	Aedes mosquito	Yellow fever / Deng fever	Viruses	Liver
2	Female anopheles	Malaria	Protozoa	Brain
3	Culex mosquito	Elephantiasis	Worms	Legs, genitals, breasts

29 State one way in which toothpaste is important when brushing teeth. C

-Tooth paste prevents bad breath.
-Tooth paste prevents tooth decay.
-Tooth paste kill germs in the teeth.
-Tooth paste remove plaque or stains from teeth.
-Tooth pastes makes teeth strong.

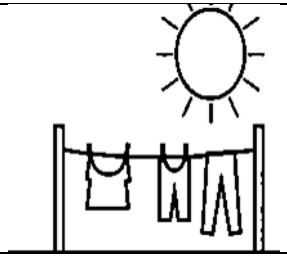

Related content

A table showing different teeth structures, their characteristics and functions and adaptations

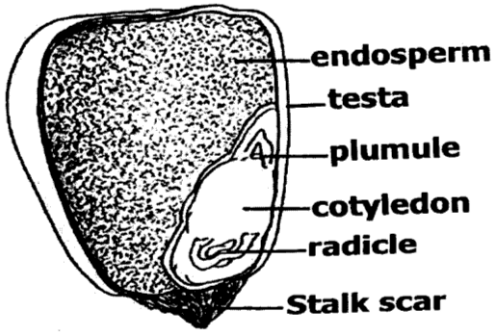

No	Type of teeth	Characteristics	Functions and adaptations
1	Canine teeth	-They are sharp and pointed on top -They have one root. -They are cone shaped	-For tearing flesh. Adaptation They are sharp and pointed to tear flesh Illustration of a canine tooth 

2	Incisor teeth	-They are chisel shaped. -They have straight edges. Note: They are the first teeth to grow in human and first to fall out.	For cutting or biting food. Adaptation They are chisel shaped to cut / bite food Illustration of an incisor tooth 		
3	Premolar teeth	-They have blunt broad ridges. -They are smaller than molars.	-For crushing, chewing and grinding food. Adaptation They have blunt broad ridges for chewing food. Illustration of a premolar tooth 		
4	Molar teeth	-They are the last type of teeth to grow in human beings. -They have two or three roots. -They have rough blunt tops.	-For crushing food. -For chewing food. Adaptations -They have blunt broad ridges to grind, chew food. -They are broad to increase surface area. Illustration of a molar tooth		

		
30	Write any one advantage of artificial Insermination. -It controls inbreeding. -It reduces the cost of buying bulls. -Many cows are Inseminated within a short time. -It prevents the easy spread of venereal diseases. Related content Artificial Insermination: This is where a farmer deposit semen into the cow's vagina using inseminating syringe. Disadvantages of artificial Insermination -It requires skilled labour. -The farmer may fail to detect the cow on heat. -It not done well, semen is wasted. -Nitrogen used to preserve semen is expensive. Gestation period Is the period of time from fertilization to birth. Signs of a pregnant cow. -The cow stops going on heat. -The udder and teats enlarge. -The belly enlarge due to the growth of foetus. Steaming up: Is the feeding of a pregnant animal on highly nutrious diet before delivery. Note: Proteins are mainly used during steaming up. Advantages / importance of steaming up -It promotes proper growth of feotus. -It stimulates milk production. -It prepares the body of the pregnant animals for birth.	K
	The diagram below shows Opiyo hanging his clothings after washing. Study and use it to answer questions 31, 32 and 33.	

<table>
<tr><td></td><td>  </td><td></td></tr>
<tr><td>31</td><td>Name the element of weather shown above.
Sunshine</td><td></td></tr>
<tr><td>32</td><td>By what process are Opiyo’s clothes able to dry?
Radiation</td><td></td></tr>
<tr><td>33</td><td>Mention the stat of matter in which heat travels fastest.
Gases
Related content
Examples of heat transfer by radiation
-Heat from the sun reaching the earth.
-Heat from fire place reaching harvested crops being sun dried.
-Heat from fire place reaching the person warming him / herself.
A table of summary showing heat transfer in different states of matter
<table>
<tr><td>Medium</td><td>Heat transfer</td></tr>
<tr><td>Solids</td><td>Conduction</td></tr>
<tr><td>Gases</td><td>Convection</td></tr>
<tr><td>Liquids</td><td>Convection</td></tr>
<tr><td>Vacuum / space</td><td>Radiation</td></tr>
</table>
Comparison of heat transfer in states of matter
<table>
<tr><td>Fastest /quickest</td><td>Gases</td></tr>
<tr><td>Faster / quicker</td><td>Liquids</td></tr>
<tr><td>Slowest</td><td>Solids</td></tr>
</table></td><td></td></tr>
<tr><td>34</td><td>Mention the part of a flower where fertilization take place.
In the ovary / Ovary
Related content</td><td>C</td></tr>
</table>

	Characteristics of insect pollinated flowers -They have brightly coloured petals. Reason: To attract pollinators. They produce scent and nectar. Reason: To attract pollinators. -They produce few pollen grains. -They have sticky stigmas. Reason: To hold pollen grains. They are large and easily seen. Reason: To be easily identified by pollinators. Characteristics of wind pollinated flowers -They produce a lot of pollen grains. Reason: To increase chances of pollination. -They produce light pollen grains. Reason: To easily be blown by wind. -They have hairy stigmas. Reason: To increase chances of pollination. -They have weak filaments. -Their filaments are longer than their styles.	
35	State any one factor that can lead to teenage pregnancy in our communities. -Rape -Defilement -Peer influence into early sex. -Lack of proper guidance and councilling. -Failure to provide basic needs to girls by parents. Related content Life skills to safe guard adolescents against teenage pregnancy -Decision making -Peer resistance -Self control -Self esteem -Assertiveness Ways of caring for reproductive organs in humans -Washing the reproductive organs regularly.	C

	-Abstaining from pre-marital sex. -Wearing cleans and dry under wears. Diseases that affect the reproductive system -Gonorrhea -Genital warts -Candidiasis -Chancroids	
36	State the difference between a maize grain and a bean seed in terms of food storage / storing food. A maize grain stores its food in the endosperm while a bean seed stores food in the cotyledon. Related content A seed is a fertilized ovule. Monocotyledonous seeds are seeds which have one cotyledon. Examples of monocotyledonous seeds -Millet -Maize -Sorghum -Wheat -Rice -Barley Characteristics of monocotyledonous seeds. -They undergo hypogeal germination. -They have one cotyledon. -They are grain seeds. Parts of a monocotyledonous seed  Functions of each part of the maize grain Endosperm It stores food for the embryo. Cotyledon It absorbs food from the endosperm and supplies it to the embryo.	K

	Testa / seed coat It protects the inner part of the seeds. Plumule It grows into the shoot system. Radicle It grows into the root system. Stalk scar It attaches the grain to the cob.	
37	Give the reason why granaries should have rat guards. To prevent rats from entering the granary to spoil store crops. Related content Qualities of a good store for storing dried crops -It should be leak proof. Reason: To prevent rainfall from falling in the granary which may lead to rotting of seeds -It should have ample space. Reason: To allow ample space. Reasons why farmers store crops -To reserve seeds for planting the next season. -To be sold when market prices are high. -To keep food for eating in the day season.	K
38	State any one first aid measure you would give to a victim who has near drowned. -Remove the person from water carefully. -Clear the mouth and nose of water or vomit. -Check breathing and give rescue breaths if the person is not breathing. -Keep the person warm and calm until help arrives. Related content Near drowning is the condition in which one's lungs are filled with water that leads to failure to breathe but not yet dead. First aid for near drowning -Yell for help from people around. -Pull the casualty from water in case you are able.	C

-Apply mouth to mouth breathing. (Kiss of life)
Note: Kiss of life opens up air ways to restore breathing / induces breathing.

39 State the reason why the fangs of a cobra are positioned pointing back ward. K

To prevent the prey from escaping from the mouth.

Related content

A classification table showing groups of snakes, characteristics and their examples

No	Group	Characteristics	Examples
1	Poisonous / venomous snake	-They have fangs. -They have triangular head. -They have poisonous glands. -They leave two fang marks at the bitten part of the body.	-Cobra -Puff adder -Black mamba -Gaboon viper
2	Non poisonous snake	-They have solid teeth. -They have round head. -They leave four marks at the bitten part of the body.	-Green grass snake -Brown snake -House snakes
3	Constrictors	They kill their prey by coiling around them to squeeze them to death.	-Python -Anaconda -Boa -Milk snake -King snake

40 In which one way can pitch of a trumpet be varied?

-By changing the position of the lips on the mouth piece when blowing.
-By pushing down one or more values to increase.
-By pulling values up to lower the pitch.

Related content

A table showing factors which determine the pitch of sound produced by musical instruments

Percussion musical instruments	Wind musical instruments	String musical instruments
-Nature of the instrument -Size of the instrument.	-Length of the tube.	-Tension of the strings.

	-Space left in the instrument.	-Nature of the strings.

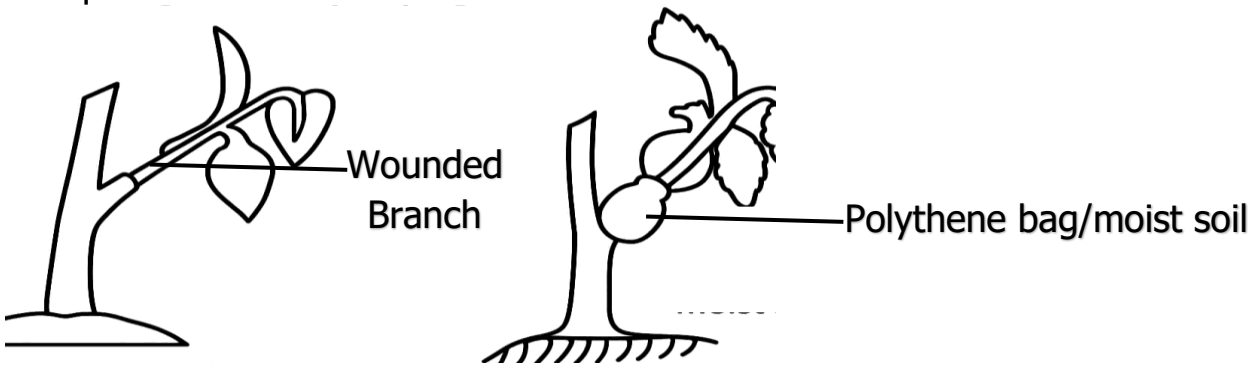

Ways how pitch of different musical instruments can be varied / changed

No	Musical instruments	How its pitch can be varied
1	Drum	-By tightening the drum's skin. -By putting a thicker skin. -By striking the drum closer to its center to produce high pitch.
2	Xylophones	-By altering the level of the slab. -Cutting of the arch to lower the sound. -Chopping off the sides to increase the pitch.
3	Flute	By closing and opening the holes t different intervals.
4	Guitar and bow harp	By tightening or loosening the strings.
5	Panpipes	-By moving the panpipes side by side on lips while blowing. -By reducing their length to increase the pitch of sound.
6	Whistle	By altering the force applied when blowing.
7	Thambo piano	Adjusting the length of the metal tines. Longer tines produce lower pitch while shorter tines produce higher pitch.

SECTION B (60 MARKS)

41	(a) Mention any two processes that take place in the presence of bacteria. -Fermentation -Digestion -Decomposition -Nitrogen fixation (b) State any one way in which liquid soap is useful when cleaning toilets. Liquid soap reduce smell in latrines. (c) Mention any one way of controlling bacterial diseases in people.	C

	-Drinking boiled water and milk. -Isolating infected people. -Washing hands with clean water and soap. -Eating clean and well-cooked food. -Proper disposal of human wastes and rubbish. -Regular brushing of teeth. -Sterilizing medical equipments. -Regular bathing.	
42	The diagram below shows a male reproductive organ. Study it and answer questions that follow.  (a) Name the parts labeled X and M. X – Cervix M – Fallopian tube / Oviduct (b) Name the part of a female reproductive system where implantation take place. Uterus / Womb (c) State the reason why the testes in males hang outside the body. The product of sperms requires temperature slightly lower than that of normal temperature.	A
43	(a) Give the main reason why a worker bee dies instantly after stinging. It loses its stinger which leads to dehydration and hence death. (b) Mention any two ways how propolis is important to bees. -Bees use propolis for repairing damaged parts of the hive. -Bees use propolis for waterproofing the brood cells. -Bees use propolis for smoothing the interior of the hive. -Bees use propolis for water proofing the hive. (c) Write any one duty of a worker bee in the hive.	K

	-To clean the hive. -To collect food. -To repair the hive. -To make honey. -To protect the hive by stinging the enemies. Related content Substances collected by worker bees -Propolis -Pollen -Nectar and water Social insects are insects that live and work together. Examples of social insects -Honey bees -Mining bees -Leaf cutter bees Types or groups of bees -Queen bees -Worker bees -Drone bees Reason why worker bees are sterile They lack an ovipositor to lay eggs.	
44	The diagram below shows a method of artificial vegetative propagation. Study it carefully and answer the questions that follow.  (a) Identify the method of artificial propagation shown above. Marcotting	A

	(b) Write any two advantages of vegetative propagation. -Plants grow and mature faster. -Desired varieties are obtained. -Young plants get food from the parent plant. -Fruit trees which take long to mature will then take short time to mature after vegetative propagation. -The farmer gets high yields. (c) Mention any one example of plants which can be planted using the above method. -Pawpaws -Roses Related content Propagation: Is the way of obtaining new plants from the parent plants. Ways of propagating plants -Seed propagation. -Vegetative propagation Vegetative propagation This is the way of obtaining near plants from parent plants using other parts other than seeds. Natural methods of vegetative propagation -Planting the bulbs. -Planting the stem tuber. -Planting the suckers. -Planting stem cuttings. Artificial methods of vegetative propagation -Shoot grafting -Budding -Layering -Marcotting	
45	(a) State the meaning of the term malnutrition. Malnutrition is a condition of poor health caused when the body does not get the right amounts of nutrients. (b) Write any two signs of malnutrition in children. -Retarded growth. -Body weakness. -Chronic tiredness. -Low body immunity.	C

-Loss of body weight.

(c) Identify the chronic condition caused by having excess fats in the body.

Obesity

Related content

Effects of malnutrition to a child

-It causes stunted growth.
-It lowers the immunity of the child.
-It prevents proper brain development.
-It causes chronic fatigue.
-It leads to loss of interest in work.

Factors that can lead to obesity

-Over eating.
-Eating a lot of fatty food.
-Lack of physical exercises.
-Medication like antidepressants.

Effects of obesity

-It can lead to high blood pressure.
-It can lead to diabetes.
-It causes breathing complication.
-It may lead to death.
-It may cause oedema.

46 The table below has part (A) showing steps taken in cleaning clothes then (B) showing the meanings. Match the items of A to B correctly.

No	Steps (A)	(B) The meaning of the terms used in cleaning clothes
1	Soaking	Separating/grouping of clothes to be washed.
2	Wringing	Putting of dirty clothes in soapy water.
3	Rinsing	Putting of clothes in clean water without soap after washing
4	Sorting	Squeezing clothes in order to remove excess water.

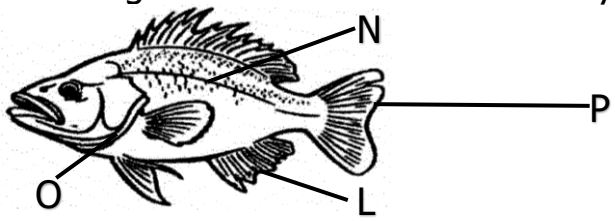

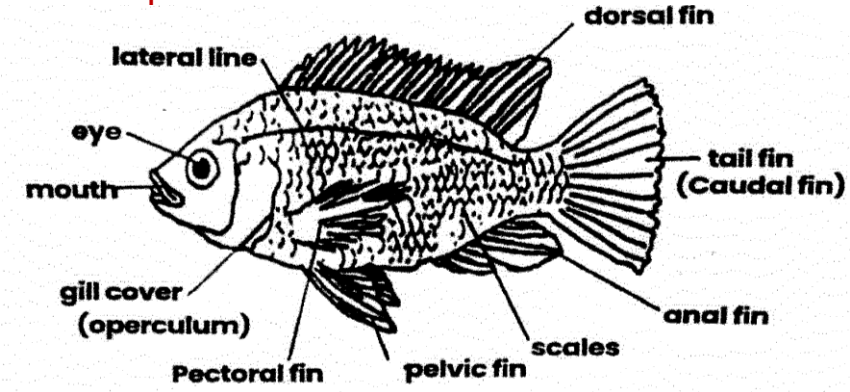

(i) Soaking — Putting clothes in soapy water.
(ii) Wringing — Squeezing clothes in order to remove excess water.
(iii) Rinsing — Putting of clothes in clean without soap after washing.
(iv) Sorting — Separating/grouping clothes to be washed.

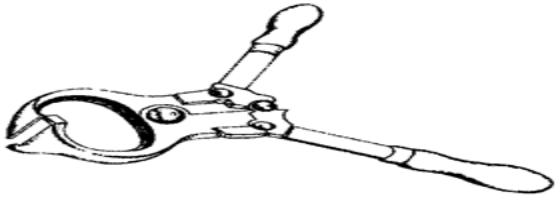

A

	Related content Importance of sorting clothes -It helps to maintain the clothe colour during washing. -It prevents bleaching clothes from staining other clothes. -I prevents less dirt clothes from absorbing dirt from dirtier clothes. Sorting is the separating of clothes to be cleaned Factors considered when sorting clothes -Colour of clothes. -Intensity of dirt. Silting is the deposition of eroded soil particles into water bodies. Human activities that can lead to silting in water bodies -Cultivating along river banks. -Grazing animals near water bodies. -Dam construction. -Road building near water sources. -Deforestation near water bodies. -Sand mining in and near lakes. Note: All the above written activities, cause soil erosion that eventually lead to silting.	
47	(a) What reason would you give to discourage a casualty who has had a burn from applying cow dung to the injured part? Cow dung attracts germs to the wounds. (b) State the first aid you would give to a convulsing victim. Putting a hard material in the mouth of a convulsing victim. (c) What reason would give for as to why you chose to give the above first aid? Hard material prevents the convulsing victim from biting the tongue. (d) Mention any one sign and symptom of convulsion. -High body temperature. -Violent shaking of the body. -Frequent urination. -Excessive sweating. -Bubbles of saliva in the mouth. Related content	C

	Ways of preventing fever and convulsion -Controlling mosquitoes. -Immunizing children. -Early treatment of infection. -Maintaining proper hygiene. Reasons why a convulsing victim should not be given food or drink. -Water or food cause chocking that may result into death.	
48	(a) In which one way is shearing differ from docking. Shearing is the cutting of overgrown wool from the sheep while docking is the cutting off of the tail from a young sheep. (b) In one sentence, write the reason why you would advise a sheep farmer to do the shearing in dry season? The weather would be warm enough for the sheep to survive without wool. (c) Write any two signs and symptoms of Brucellosis in sheep and goats. -Abortion or dead foetus. -Swollen testicles in rams. Related content Reasons shearing sheep. -To regulate body temperature of sheep. -To prevent over heating of the sheep during dry season. -To remove hiding places for ecto parasites like ticks. Advantages of shearing -It prevents over heating the sheep. -It reduces breeding of ecto parasites on sheep. -It enables a farmer to get wool. The removed wool from the sheep is called **Fleece.**	C
49	(a) In which one way is a secateurs adapted to its function of pruning crop? It has sharp strong blades that help in cutting small branches. (b) Mention any two ways of caring for simple garden tools. -Washing garden tools. -Sharpening cutting garden tools. -Regular serving of garden tools. -Painting metallic garden tools. -Lubricating moving parts of some garden tools.	A

	-Repairing damaged garden tools. (c) Name the correct garden tool for making holes in the soil during planting of seeds or seedlings. Dibber Reject: A hoe Related content Reasons why digging is done in crop growing -To loosen soil. -To remove weeds for better planting conditions. -To improve soil aeration. Activities done during ploughing -Digging -Harrowing -Detrashing Harrowing is the breaking of big lumps of soil which are left after ploughing. Detrashing is the removal of unwanted materials from the soil.	
50	Mr. Kamya has been planting matooke on large scale for years. He always cut off the leaves and roots during transplanting. Use the given information about Mr. Kamya and his plantation to answer the following questions. (a) Identify the method of Natural vegetation propagation used by Mr. Kamya. Planting suckers. (b) Apart from banana plants, write any three other plants that can be planted by the method mentioned in (50 a) above. -Sisal -Pineapples -Aloe vera Related content Reasons why suckers are planted in wider pits -To avoid overcrowding of suckers. -To ease expansion and penetration of roots into the soil. -To create large surface area for trapping water for proper growth of suckers. Reasons why leaves are cut off during transplanting of suckers To reduce the rate of transpiration that may cause wilting.	C

51	The diagram below is of a fish. Study it and answer the questions that follow.  (a) Name the structure marked L. Anal fin (b) State the function of each of the structures marked P and N. (i) P: Structure P enables the fish to change direction and move forward. -Structure P has strong muscles to control the turning of the fish during swimming. Note: The tail fin works like the steering wheel of a car. (ii) N: Structure N is used to detect sound vibrations. -It is used to sense danger in water. Note: The lateral line works like the human ear and feather of an insect. (c) Write the function of the structure covered by part labeled O. They are used for breathing. Note: The gill works like lungs, spiracles, book lungs and stomata. Related content External parts of a fish and their functions  (a) Mouth -It is used for feeding. -It is used to take in water to extract dissolved oxygen. (b) Nostrils / Nare	C

	-It is used for smelling food. Note: Nostrils work like feelers of an insect, nose of human beings. (c) Dosal fin It is used for protection They prevent the fish from rolling when swimming. (d) Pelvic and pectoral fins -They enable the fish to swim upwards and downwards. -They increase or decrease speed when the fish is swimming.	
52	The diagram below shows an equipment found on livestock farms. Study it and answer the questions that follows.  (a) Identify the farm instrument drawn above. Burdizzo (b) How important is the above named instrument to a cattle farm? It is used in closed castration of live stock (c) In one way, state how the above named tool adopted to its functions. It has a blunt pincer (d) Mention any one advantage of castration in livestock farming -It prevents in breeding -It prevents random mating -It prevents un wanted pregnancies -It prevents bad smell in male animals Related content Calf management practices on a farm -Dehorning -Hoof trimming -Castration -Spraying	A

	-Dipping -Dusting -Numbering / identification Branding This means putting marks on the body of animals using hot iron Different ways of branding animals -Ear notching -Ear tagging -Using a number lace -Ear tattooing -Tail bobbing Castration: This is the removal or inactivation of testicles of a male animal Methods of castration -Open castration -Closed castration -Loop castration	
53	(a) List down any two examples of urinary tract infection (UTI_S). -Genital warts -Genital herpes -Gonorrhea -Candidiasis -Trichomoniasis -Chlamydia (b) Write any two signs of UTIs. -Blocked urethra -Pus discharge from penis and vagina -Swelling of genital parts -Bleeding from the genital parts Related content Ways of controlling secondary infections -Abstain from sex until marriage -Be faithful to our sexual partners	C

	-Use condoms to play sex with un trusted partner -Avoid extra marital sex -Learning more facts about HIV PID in full Pelvic Inflammatory Disease Signs of PID -Pain in the lower abdomen -Fever Dangers of PID (effects of uncontrolled STDs in female) -Painful menstruation -Sterility (barrenness) -Blocked oviduct -Wounds in the uterus General prevention and control of STDs / STI -Keep reproductive organs clean -Keep latrines clean -Abstain from sex until marriage -Be faithful to our sexual partners -Use condoms to play sex with un trusted partner	
54	(a) State the reason why self-medication is dangerous to our health. -It may lead to wrong treatment of the disease. -It can cause overdose or underdose of medicine. -It may result in drug resistance, especially antibiotics. -It can cause serious side effects or poisoning. -It may delay proper medical treatment. -It can damage body organs like the liver or kidneys. -It may cause allergic reaction that can be life-threatening. (b) State any two factors considered when prescribing drugs. -Age and patient -Weight of the patient -Kind of previous drug	K

	-Duration of sickness -Type of sickness (c) What does the statement below represent medically? (2 x 3) - Means taking 2 tablets every after 8hours -Means taking 2tablets three times a day Related content Advantages of drug prescription -It prevents wrong dose -It prevents drug misuse -It prevents poisoning Causes of over dose -Much fear for the diseases -Sweetness of some drugs -Self medication -Drug misuse -Keeping drugs in children's reach Disadvantages of over dose -It leads to poisoning -It can lead to death -It damages body organs Some information manufactures put on a drug during packaging and before selling it -Name of the drug -Diseases cured by a drug -Expiry date -Composition of the drug	
55	(a) Give the meaning of the term health parade. This is an assembly done at school to check on children's hygiene (b) Outline any one example of people who conduct health parades at school. -Health prefects -Sanitary prefects -Science teachers -Teachers on duty	A

	(c) Mention any one activity carried out on health parade. -Checking children with un brushed teeth - Checking children with long finger nails -Checking children with dirty uniforms -Checking children with jiggers (d) State any one reason why health parades are important in school. -To promote personal hygiene among school children -To promote good health among school children -To promote child program Related content Child to child program This is the health program where older children help the young ones to promote good health Activities done in child to child program -Older children teach young ones how to use latrines -Older children teach young ones to wash hands before meals -Older children take young ones for immunization PWD in full People With Disabilities Types of disabilities -Physical disabilities -Sensory disabilities Physical disabilities This is when a person's limbs or arms are crippled Sensory disabilities This is when a person's sense do not work well	

Always use our dream education materials for quality assessment, use the DEC materials.
NOTE: We do workshop both internal and external for orienting teachers in:-
a) UNEB ACCEPTED Question approach
b) Modern teaching techniques
c) Lesson planning, scheming and proper lesson notes arrangements.
d) We also do book auditing as far as school/company finances and concerned.

e) We also train schools/company book keepers with skills in Excel, quick books and tally accounting. So, call us on +256759380519/0764873958/0778069610

Note, we have acknowledged the challenge of our learners trying to cope up with new lower secondary curriculum and so we have shifted our setting to face the new challenge which calls for learners' personal reasoning and then teachers always to conduct learner's centered lessons. This paper constitutes 25% of the current class and 75% the previous classes to enable teachers and learners to preview the previous topics in order and limit knowledge gaps and hence produce fruitful results. Thanks for supporting Dream.
