P7 TERM ONE LESSON NOTES

TOPIC: **VEGETATION OF AFRICA**

SUBTOPICS:

- Location and names of vegetation types in Africa
- Factors that influence vegetation distribution in Africa
- Importance of vegetation to people and animals
- Importance of game parks
- Animals found in different vegetation zones
- Reasons why wild animals live in different vegetation zones
- Population distribution in relation to vegetation
- Reasons for difference in population distribution in different vegetation zones
- Effects of population on vegetation

SESSION	COMP	CONTENT	METHODS	RELEVANCE	LESSON ACTIVITY	SCENARIOS
1.	Names types of vegetation in some parts of Africa	Vegetation is the plant cover of an area. It includes all plants that grow on the surface of the earth. **Types of vegetation** • Natural vegetation Planted vegetation Planted vegetation **Planted vegetation** is the plant life cover of an area that is planted by man. **Examples of planted vegetation**. Planted forests Planted grass eg.paspalum Planted flowers	Guided discovery Observation	To help the learners understand their natural environment and how humans interact with it	Naming types of vegetation in some parts of Africa	School compound Village walk Market day National parks Wetland

		Crops **Natural vegetation** Natural vegetation is the plant life cover of an area that grows on its own. It includes all plants in the environment that grow without the influence of man. **<u>Examples of natural vegetation.</u>** Natural forests Grasslands Shrubs Swamp vegetation Thickets Natural flowers Bushes **<u>Importance of vegetation</u>** It helps in formation of convectional rainfall. It is a source of wood fuel. i.e. charcoal, firewood, It purifies air by absorbing carbon dioxide and releasing oxygen to the atmosphere. It provides raw materials for the pulp industry. It provides herbal medicine to people. It provides raw materials for crafts industry. It is a source of income through attracting tourists. Wattle trees provide tannin used for softening leather. It is a source of food to people and animals. It acts as natural habitat for wild animals.	Brainstorming Question and answer Guided group discussion	To help the learner value natural resources, protect wetlands, forests and water bodies To help learners understand how countries are divided using landmarks such as forests		Home garden Soil type

				To help learners understand their environment ,community and country better		
2.	Locates and names the types of vegetation in Africa . Describes equatorial rainforests	**VEGETATION ZONES OF AFRICA** **(TYPES OF NATURAL VEGETATION)** Savannah vegetation Montane/ Mountain vegetation Temperate vegetation Mangrove vegetation Desert vegetation Semi-desert vegetation Equatorial rain forests / Tropical rainforests **VEGETATION ZONES OF AFRICA** **EQUATORIAL RAINFORESTS** This vegetation zone is described as ever green. Equatorial rain forests are also called the Tropical rainforests. They are called rain forests because they grow in areas that receive plenty of rainfall.	Guided discovery Observation Brainstorming	To help the learners appreciate the role of vegetation in rainfall formation To help the learner recognize forests in	Locating and naming the types of vegetation in Africa . Describing equatorial rainforests	Travelling across Africa Comparing two families Safari adventure Home garden Tourism

		Tropical rain forests mainly grow in areas which experience equatorial climate. They are found along the coast of West Africa and Central Africa. In Uganda, tropical rain forests are mainly found around the shores of Lake Victoria. **Examples of Tropical rainforests (Natural forests) in Uganda.** **Table showing Examples of Tropical rainforests (Natural forests) in Uganda. And other African countries** **Characteristics of Equatorial rainforests**. Trees are ever green. (They don't shed their leaves). Trees are of different species. Trees have broad leaves. Trees grow very tall due to phototropism (to get sunlight). Trees have buttress roots. Trees have hard wood. Trees form a canopy (a layer of branches and leaves that form a cover to the ground). They have a thick undergrowth which makes them impenetrable. **Common tree species in Equatorial rain forests/ hard wood trees.** Mahogany Teak	Question and answer Guided group discussion	the natural surrounding To help learners understand how altitude affects vegetation and human activities To help leaners know the importance of vegetation		

		African walnut Green heart Mvule trees (Iroko) Ebony Rose wood **Economic activities commonly done in Equatorial rain forests.** Lumbering Fruit gathering. Tourism Herbal medicine collection Charcoal making **Note:-** A canopy is an umbrella-like structure formed by trees in tropical rain forests. Common tree species in planted forests include; Eucalyptus, Cedar, Fir, Spruce, Cypress, Pine etc. These tree species provide soft wood. Most trees in planted forests provide soft wood timber from which various products such as match boxes, papers, ply wood, toilet papers, wooden rulers, pencils are made. Most trees in natural forests provide hard wood timber from which various products such as wooden tables, wooden desks, wooden windows, benches, cupboards, wooden chairs are made. Deciduous trees are trees that shed their leaves during the dry season. **Importance of forests.**				

		Forests help in formation of convectional rainfall through transpiration. They are source of income through tourism. They act as a habitat for wild animals. They are source of herbal medicine. They help to reduce soil erosion. They are source of timber. Trees act as windbreaks. **Problems facing forests** Deforestation. Outbreak of bush fires. Human encroachment on forests. **DEFORESTATION** Deforestation is the massive cutting down of trees without replacement. Lumbering is the cutting down/felling of mature trees for production of timber. **Reasons why people cut down trees/ carry out deforestation.** To get land for settlement To get land for crop growing. To get land for constructing roads. To get land for building industries. To get timber. To get wood fuel. To get land for constructing flat play grounds. **Dangers/effects of deforestation.** It leads to soil erosion. It leads to desertification/ drought.				

		It destroys the natural habitat for animals. It leads to displacement of wild animals. It leads to extinction of some valuable tree species. It reduces the amount of rainfall received in an area. **FOREST CONSERVATION** Forest conservation is the act of protecting forests from extinction. **Ways of conserving forests**. By practising afforestation. By practising reafforestation. By practising agro-forestry By teaching people on the importance of forests. By educating people about the dangers of deforestation. Through rural electrification. (Extension of electricity to rural areas) **Note:-** Afforestation is the planting of trees on a large scale where they have never been/ existed. Reafforestation is the planting of trees on a large scale where they have ever been/ existed. Agro-forestry is the growing of crops together with useful trees on the same piece of land. Forestry is the practice of planting and caring for forests. National Forestry Authority (NFA) is the body that is responsible for conservation of forests in Uganda. National Environment Management Authority (NEMA) is the body responsible for conservation of the environment in Uganda. It is under the **Ministry of Water and Environment**.				

		Roles of NFA. It teaches people about the importance of forests. It enforces laws against deforestation. It creates forest reserves. It evicts people settling in forest reserves				
3.	Locates and names the mangrove forests on the map of Africa . Describes mangrove forests	**MANGROVE FORESTS.** Mangrove forests / swamps are found in low lying areas along the coast of Africa. The mangrove forests are also called mangrove swamps because they grow in salty sea water. **African countries with Mangrove forests** Tanzania Nigeria Ghana Cote d'Ivoire Sierra Leone Mozambique Cameroon **Characteristics of Mangrove forests** They have hard wood. Trees have buttress roots above the ground. They commonly grow in salty water. They have water proof timber. **Note:-** Timber from mangrove forests is suitable for ship building because it is waterproof. The buttress roots help trees in mangrove forests to stand firmly in salty water.	Guided discovery Observation Brainstorming Question and answer Guided group discussion	To enable leaners understand how mangrove forests are important to fishing industry To enable learners locate the countries where mangrove forests are found To enable learners appreciate mangrove	Locating and naming the mangrove forests on the map of Africa . Describing mangrove forests	Coastal trip Fishermen tying boats to roots of mangrove Crabs hiding under the muddy floor Coastal flooding East African coast Trees growing in muddy areas Bird watching Boat ride

		Importance of Mangrove forests. They provide waterproof timber used for ship building. **MEDITERRANEAN VEGETATION** Mediterranean vegetation is found in North West Africa and Southern tip of South Africa (Cape province) The growth of forests in this region is favoured by too much rainfall received in winter. **Countries where Mediterranean forests are found.** Tunisia Algeria South Africa. Libya Morocco **Characteristics of Mediterranean vegetation** The trees have thick leaves in order to reduce the rate of transpiration. Trees have deep and widely spread roots. Trees shed their leaves during the dry season (to reduce the rate of transpiration) **Common tree species in Mediterranean forests** Cypress Fir Citrus fruits. Cedar Pine **Economic activities commonly done in Mediterranean vegetation zone.** Lumbering Tourism	Picture interpretation	forests as important tourist attractions To enable learner explain how they hinder fishing		Safari adventure Animal habitat School trip Animal movement Human activities

		GRASSLANDS Grasslands are large areas of land covered with grass. The height of grass depends on the amount of rainfall received and the fertility of the soil. Savannah grasslands and temperate grasslands are the main examples of Africa's grasslands. **TEMPERATE GRASSLANDS** It grows in Temperate climatic region. Temperate grasslands of Africa are called the High veld / the Veld. The Veld is called the High veld because it is on a high plateau in South Africa. **States in South Africa with temperate grasslands** Orange Free State Transvaal Natal **Characteristics of temperate grasslands**. They have few scattered short trees. Its grass is short. Grass is long and narrow with a hairy covering. **Common economic activities carried out in temperate grasslands.** Sheep rearing Dairy farming. (due to the presence of plenty of pasture for animals, and favourable cool climate) **SAVANNAH VEGETATION** Savannah is the name given to the Tropical grasslands of Africa. Savannah vegetation covers the largest part of Africa.				

		Savannah vegetation is located in the Tropical region of Africa. Parts of Savannah vegetation Savannah grassland / dry savannah vegetation This has short grass and few scattered trees. Savannah woodland / wooded savannah / wet savannah vegetation It has tall grass and many trees. **Note;-** Miombo woodland of Central Tanzania is an example of wooded savannah. Miombo woodland is sparsely populated because the area is highly infested with tsetse flies which spread sleeping sickness to people, and nagana to cattle. Bee keeping is the main economic activity carried out in Miombo woodland of central Tanzania. Most game parks in Africa are located in savannah grasslands because there is plenty of pasture for animals. **Characteristics of Savannah vegetation** It has tall grass. It has scattered trees. Trees have long roots which they use to tap underground water. Grass appears green during the wet season. Trees usually shed their leaves during the dry season. (in order to reduce the rate of transpiration) **Note: -** Deciduous trees are trees that shed their leaves during the dry seasons. **African countries with savannah vegetation.**				

		Uganda Tanzania Kenya Angola Malawi Zambia **Common tree species in savannah vegetation.** **Zimbabwe** Acacia Baobab Palm trees **Economic activities commonly done in savannah vegetation** Tourism Pastoralism Bee keeping				
4.	Locates and names the montane vegetation on the map of Africa . Describes montane vegetation	**<u>MOUNTAIN VEGETATION/MONTANE VEGETATION</u>** It is also called montane vegetation. It is found in mountainous areas. Vegetation changes with increase in altitude. In East Africa, montane vegetation is mainly found on slopes of mountain Rwenzori, mountain Kenya, mountain Elgon, mountain Kilimanjaro etc. **Factors that cause vegetation variation in mountainous areas.** Altitude Temperature Rainfall distribution	Guided discovery Observation Brainstorming	To help learners understand mountain vegetation To help ,earners appreciat	Locating and naming the montane vegetation on the map of Africa .	Safari adventure Animal habitat School trip Animal movement

		Note;- Heath is the low evergreen rough grass. Moorland is an area of highland covered with heath. Areas where Mountain vegetation is found. Mountain Rwenzori in Uganda and DRC. Mountain Kilimanjaro in Tanzania. Drakensberg mountains in Lesotho. Ethiopian highlands in Ethiopia **Characteristics of Mountain vegetation** Mountain Kenya in Kenya Mountain Elgon in Uganda and Kenya. The trees are ever green. Vegetation grows in zones according to altitude. The foothills have savannah grasslands. The trees grow very tall. There are few plants on top of the mountain due to low temperatures. **Economic activities commonly done in Mountain vegetation.** Lumbering Fruit gathering Charcoal making. Tourism Bee keeping. Herbal medicine collection	Question and answer Guided group discussion	e montane vegetation in the economic development of countries	Describing montane vegetation	Human activities Bird watching Mountain climbing Cooler temperatures at the top of mountains Cloud and mist Farming on mountain slopes Hiking tourists Firewood collection

				To enable learners recognize the relationship between		Snow on mountain tops Layers on a mountain

				vegetation and animals		
5.	Locates and names the desert vegetation on the map of Africa . Describes desert vegetation	**DESERT AND SEMI-DESERT VEGETATION.** A Desert is a large dry area of land with few plants growing on it. Desert vegetation is found in Desert climatic condition. Deserts in Africa include; Sahara desert, Namib desert and Kalahari desert. The land in deserts is usually covered with sand dunes and bare rocks. Crop growing and livestock farming is mostly done around oases. Plants that survive in very dry conditions grow in this region. Desert vegetation has few trees because it receives very little rainfall. Trees in desert vegetation have thick barks and thin leaves to reduce the rate of transpiration. Cactus is able to survive in desert conditions because it stores water in its stem. **Characteristics of Desert vegetation** Trees have thick barks. Trees are scattered. Trees are short and thorny. Trees have long roots to tap underground water. Trees have thin leaves that reduce the rate of	Guided discovery Observation Brainstorming Question and answer Guided group discussion	To help learners understand how to locate desrt vegetation on the map of Africa To enable learners appreciate tourist attractions in desert vegetation To enable the learners	Locating and naming the desert vegetation on the map of Africa . Describing desert vegetation	water shortage too much heat human activities hot sand

		transpiration. Vegetation is scanty and resistant to drought. **Common plants in Desert vegetation.** Cactus Baobab Poppies Acacia **African countries with Desert vegetation** Algeria Morocco Libya Namibia Egypt Angola **Note:-** Pastoralism is the major economic activity carried out in Desert vegetation.	Picture interpretation	learn about desert related challenges like high temperatures To help learners explain how oases are important to farmers		
6.	Locates and names the swamp vegetation on the map of Africa . Describes swamp vegetation	**SWAMP VEGETATION.** A swamp is a water logged area with vegetation. Or. A swamp is an area that has vegetation and plenty of water. Swamps are sometimes referred to as wetlands. Swamps are found along rivers, lakes and valleys. A map symbol of a swamp **Examples of swamp vegetation** Papyrus Palm trees	Guided discovery Observation	To enable learners understand swamp vegetation To help learner describe	Locating and naming the swamp vegetation on the map of Africa .	Flooded gardens during heavy rains A child fetching water from a swamp

		Sisal **Economic activities commonly carried out in swampy areas.** Crop growing Tourism Fishing Pottery Mining Brick making. Swamp resources/ craft raw materials got from swamps. Papyrus reeds-used for making baskets, mats, hats etc Palm leaves-used for making mats etc. Clay-used for making products like cups, plates, pots, flower vessels etc Sand-used for building. **Common crops grown in swamps** Rice Vegetables Yams Sugarcane. **Importance of swamps.** They are a source of water. They are a source of fish e.g. Mud fish. They are a source of minerals e.g. Sand They are habitats for aquatic animals e.g. crocodiles, hippopotamuses, frogs etc. They help in formation of convectional rainfall.	Brainstorming Question and answer Guided group discussion Picture interpretation	the importance of swamps to craft industries To enable the learner learn how swamps contribute to the purification of water To help learners appreciate swamps as water sources	Describing swamp vegetation	Fishing as a source of income Slow water School trip Pollution Water purification Village settlement Pottery

		They help to filter water. (they have spongy-like roots which help to filter water) ❖ Swamps help to control floods. They are a source of raw materials for craft work eg. papyrus reeds, palm leaves etc. They attract tourists who bring in income. **Ways people misuse swamps.** By dumping industrial wastes in swamps. Through uncontrolled harvesting of papyrus reeds. By burning swamp vegetation. Through swamp drainage. **Note:-** Swamp drainage is the removal of water from swamps. Swamp reclamation is the act of changing a swamp from its natural state for other uses. Swamp encroachment is the illegal settlement in swamps. **How people drain swamps.** By adding murram in swamps. By digging channels in swamps. **Reasons why people drain swamps.** To get land for crop growing. To get land for constructing industries. To get land for settlement. To construct roads. **Dangers of draining swamps.** It leads to drought/ desertification. It leads to death of aquatic animals. It leads to floods. It leads to displacement of aquatic animals.		for domestic use and wildlife		

		It leads to reduction in craft raw materials. **Problems faced by people living near swamps.** Floods during the rainy season. Attacks from aquatic animals. Poor road transport. Attacks from disease vectors that live in swamps.				
7.	Describes factors influencing vegetation distribution	**VEGETATION DISTRIBUTION IN AFRICA** Vegetation distribution is the way plant life is spread in an area. Some parts of Africa have thick vegetation while others have scanty/ scattered vegetation. **Factors that influence/ affect vegetation distribution in Africa.** Altitude Nature of soils Human activities Rainfall distribution / climate. Drainage system **How the above factors affect the vegetation of Africa**. **Climate / Rainfall distribution** Areas which receive plenty of rainfall have thick vegetation while those that receive very little rainfall have scanty vegetation. **Drainage system** Areas near large water bodies have thick vegetation while those that are far away from large water bodies have scanty vegetation. **Altitude.**	Guided discovery Observation Brainstorming Question and answer Guided group discussion	To help leaners understand the description of factors influencing vegetation distribution To enable the learner appreciate the role of vegetation in	Describing factors influencing vegetation distribution	Farmers challenges Animal habitat Settlement River source Nature of soil Migration The lost tourist Wildlife tracking Mountain climbing

		Areas of low altitude have thick vegetation while those of high altitude have very little vegetation. **Nature of soils / Soil fertility**. Areas with fertile soils have thick vegetation while those with infertile soils have scanty vegetation. **Human activities** Some human activities promote the growth of vegetation while others destroy vegetation of an area. **Human activities that destroy vegetation.** Deforestation Overcultivation Swamp drainage. Overgrazing Bush burning **Note:-** Deforestation, bush burning and over grazing cause soil erosion. Qn: How does deforestation cause soil erosion? It leaves the land bare exposing it to agents of soil erosion. **Human activities which promote the growth of vegetation**. Afforestation Agro-forestry Reafforestation Rotational grazing	Picture interpretation	settlement patterns To help learners learn its Importance to carpenters		Windward and lee ward side of a mountain
8.	Explains the importance the importance of vegetation to	**INFLUENCE OF VEGETATION ON ANIMALS** **ANIMAL DISTIBUTION IN DIFFERENT VEGETATION ZONES**. Equatorial rain forests.	Guided discovery	To enable the learner understan	Explaining the importance the	Hunting Fishing

	people and animals Explains why animals live in different vegetation zones	There are tall trees that provide shelter to climbing animals. There are few herbivorous animals due to little grass. There are many climbing animals which feed on fruits in this zone. **Note:-** The bamboo shoots in some mountainous areas are eaten as food by the mountain gorillas. **Common animals in Equatorial rain forests.** Baboons Monkeys Mountain gorillas Chimpanzees **Why climbing animals are common in Tropical rainforests.** They have many fruits which climbing animals feed on. There are many trees which provide a conducive habitat for climbing animals. **SAVANNAH VEGETATION** Grass eating animals (herbivorous animals) are common in this region. Flesh eating animals (carnivorous animals) also live in savannah vegetation in order to feed on herbivorous animals. Animals that feed on both flesh and grass (omnivorous animals) are also common here due to the presence of plenty of food. **Why most animals live in Savannah vegetation zone.** There is plenty of pasture for animals.	Observation Brainstorming Question and answer Guided group discussion Picture interpretation	d how vegetation influences animal distribution, human settlement, human activities a	importance of vegetation to people and animals Explaining why animals live in different vegetation zones	Animal tracking Vegetable garden Bee keeping Flooded swamp firewood collection Cultural practices

		Carnivorous animals live in savannah to hunt other animals. **Common animals in Savannah vegetation.** Zebras Leopards Lions Warthogs Hyenas Buffaloes Antelopes Kobs **SWAMP VEGETATION** Animals that live both in water and on land are common in swamp vegetation. **Common animals in swamp vegetation** Crocodiles Hippopotamuses Snakes Frogs Tortoises **DESERT VEGETATION**. There are few animals in desert vegetation due to limited grass and water for animals. Burrowing animals are common in this zone. Animals that can survive for so long without taking water are common. **Common animals in Desert vegetation.** Squirrels Camels				

		Ostriches Newts **TEMPERATE GRASSLANDS.** There are many herbivorous animals in this zone due to the presence of pasture. Carnivorous and omnivorous animals are also common in this zone. Why there are many animals in Temperate grasslands There is plenty of pasture for animals. Presence of many herbivorous animals which carnivorous animals feed on. **Common animal species in Temperate grasslands.** Antelopes Gazelles Wolves Lions Kobs Leopards Zebras Rhinoceros **MOUNTAIN VEGETATION** It has many animals with a lot of fur. It has many climbing animals that feed on fruits. It has many gorillas that feed on bamboo shoots. **Common animals in montane vegetation**. Mountain gorillas Monkeys Chimpanzees Baboons				

		PLACES FOR WILDLIFE CONSERVATION. National parks Zoos Game reserves Marine parks Sanctuaries				
9.	Identifies the importance of game parks to people and animals Explains problems faced by game parks	**NATIONAL PARKS IN AFRICA** A game park is a large area of land gazetted by the government for wildlife conservation. Wildlife refers to animals, birds, plants and insects that live on their own in the natural habitat. Most game parks in Africa are located in savannah grasslands because there is plenty of pasture for animals. **Examples of national parks in Africa** Ruaha national park in Tanzania Serengeti national park in Tanzania Murchison falls national park in Uganda Lake Mburo national park in Uganda Queen Elizabeth national park in Uganda Kidepo valley national park in Uganda Bwindi national park in Uganda Mgahinga national park in Uganda Lake Nakuru national park in Kenya Virunga national park in DRC Kruger national park in South Africa Garamba national park in DRC Tsavo national park in Kenya Awash national park in Ethiopia Mudumu national park in Namibia Gemsbok national park in Botswana	Guided discovery Observation Brainstorming Question and answer Guided group discussion	To help the learner understand the major national parks in Africa To help learners understand the importance of vegetation to animals and people	Identifying the importance of game parks to people and animals Explaining problems faced by game parks	Family safari trip Lost tourist Animal protection Rangers daily routine School trip Animal migration Road construction Fire outbreak Debates

		Kouf national park in Libya Karoo national park in south Africa A Game reserve is a large area of land gazetted by the government for future expansion of game parks. Controlled hunting can be allowed in a game reserve after seeking permission. **Examples of game reserves** Pian-upe game reserve in Uganda. Ajai game reserve in Uganda. Selous game reserve in Tanzania (the largest in East Africa). Kigezi game reserve in Uganda. Matheniko game reserve in Uganda. Bokora game reserve in Uganda. Karuma game reserve in Uganda. Masai mara game reserve in Kenya. Katonga game reserve in Uganda. A map showing location of gameparks in Africa **Major National parks in East Africa** **Note:-** Murchison falls national park is the largest national park in Uganda ✓ Ruaha national park is the largest national park in East Africa. Tsavo national park is the largest national park in Kenya. Major tourist attractions in selected Africa's national parks Animal species in savannah grasslands	Picture interpretation	To help leaners appreciate the importance of national parks in the development of a country		

		Importance of game parks They create job opportunities to people. E.g. The game rangers They earn income through attracting tourists. They promote the development of infrastructure e.g. Hotels, roads. They are used for education and scientific research. They help to preserve wildlife for the future generation to see. They promote international relationships. **Activities that commonly take place in Africa's national parks.** Animal tracking Game drives Nature walks Mountain climbing Boat rides Bird watching **Prohibited/unauthorized activities in national parks**. Animal grazing Hunting Crop cultivation Human settlement. **Problems facing national parks in Africa**. Poaching Poaching is the illegal hunting of animals in national parks. It leads to extinction of animal species in national parks. Poaching reduces the number of animals in national parks. **Why people carry out poaching.**				

		To get meat. To get horns and ivory from them. To get hides and skins. **Prolonged drought** It dries pasture on which animals feed. It also destroys the natural habitat for animals. **Bush fires.** They destroy pasture for animals. They lead to death of animals. They lead to displacement of wild animals. They destroy habitats for animals **Outbreak of animal diseases**. Diseases lead to death of animals in national parks. e) **Human encroachment on national parks**. It leads to displacement of wild animals. **Political instability in some parts of Africa.** It leads to death of animals in national parks. It leads to displacement of wild animals. It leads to destruction of the natural habitat for animals. **Possible solutions to the problems facing national parks in Africa**. By enforcing laws against poaching. By sensitizing people about the importance of wild animals By improving on security in areas near national parks. By extending veterinary services in national parks. By enforcing laws against human encroachment on national parks. **Ways of caring for animals.**				

		By protecting them. By treating sick animals. By feeding them on nutritious feeds. By treating sick animals. **Note:-** Game wardens protect wildlife in national parks, and also control fire from destroying plants and animals. **Importance of caring for animals**. It promotes tourism. It promotes education and research. It reduces death of animals.				
10.	Identifies the Identifies the importance of game parks to people and animals Explains problems faced by game parks Describes way of caring for wild animals Identifies the animals found in different vegetation zones	**TOURISM INDUSTRY IN AFRICA** Tourism is the movement of people to places of interest for pleasure, enjoyment or study purpose. A tourist is a person who travels to places of interest for pleasure, enjoyment and study purposes. Tourism is called an industry because; It generates income. It creates job opportunities to people. Tourism is called an invisible trade because it generates income without exchanging physical goods. Tourism is called an invisible export because it generates foreign exchange without exporting physical goods. **Types of tourists.** Local tourists International tourists.	Guided discovery Observation Brainstorming	To enable the learner tourism as a source of income in a country To help learners recognize the role of tourist attractions	Identifying the Identifies the importance of game parks to people and animals Explaining problems faced by game parks Describing way of caring for wild animals	Tourist visiting Different places School trip Safari adventure Beach holiday Cultural dance festival

		Local tourists move from one part of the country to another for tourism while international tourists move from one country to another for tourism. **Tourist attractions in Africa.** Wildlife Beautiful beaches Historical sites Climate Physical features Culture **Importance of the Tourism industry**. It creates job opportunities to people. It promotes the development of infrastructure like roads, lodges, hotels. It promotes international relationship. It creates market for locally manufactured goods. Hotels provide accommodation to tourists. It is a source of revenue to the government. It promotes conservation of wildlife. **Problems facing the Tourism industry in Africa.** Political instability in some parts of Africa. Poor transport and communication network. Poor accommodation facilities. Shortage of funds to promote the industry. Limited tourist attractions in some parts of Africa. Limited advertisement of tourist attractions on international media. **Possible solutions to the problems facing Africa's Tourism industry.**	Question and answer Guided group discussion Picture interpretation	To help learners understand the importance of tourism To enable the leaner recognize the influence of vegetation on population To help learners understan	Identifying the animals found in different vegetation zones	Mountain climbing Museum visit Craft market Bird watching Recreation activities City tour Environmental awareness Cultural food Tourist misunderstanding Money exchange Transport and travel

		By improving on security in Africa. By enforcing laws against poaching. By constructing better roads in all parts of Africa. By advertising Africa's tourist attractions on international media. By importing new species of wildlife in Africa. By training more game wardens. By building better accommodation facilities in Africa. By gazetting more wildlife conservation areas. **Dangers of Tourism.** Some tourists come as spies. Tourism can bring about spread of diseases in the country. Tourism can bring about change of culture. Some tourists teach people anti-social behaviour. **THE INFLUENCE OF VEGETATION ON POPULATION** Population is the number of people living in an area at a given time. Population distribution is the way people are spread in an area. Some vegetation zones have sparse population while others have dense population. Population distribution per zone. Table showing Vegetation zone, Population distribution and Reason for population distribution **Dangers of vegetation.**		d reasons for conservin g vegetatio n		International conferences Rehabilitatio n center

		It harbours dangerous animals to people. It harbours disease vectors. Thick vegetation hinders road and railway construction. **Effects of population/people on vegetation.** Some vegetation is poisonous to people and animals. It creates hiding places for wrong doers. People clear vegetation to get land for settlement. People clear vegetation to construct industries. People cut down trees in order to get wood fuel. People clear vegetation to construct roads. **VEGETATION CONSERVATION** This is the protection of plant life from being destroyed. It is the act caring for and protecting plants in the environment. **Human activities which destroy vegetation in an area.** Deforestation Over cultivation. Bush burning Brick making Swamp drainage. Over grazing **Ways how man destroys vegetation in an area.** Through bush burning Through uncontrolled wetland harvesting. Through deforestation. Through overgrazing. Through swamp drainage. Through overcultivation. **Ways of conserving vegetation**.				

		By afforestation. By reafforestation. Through agro-forestry. By establishing game parks and game reserves. By establishing forest reserves. Through rural electrification. By using energy saving cooking stoves. By enforcing laws against deforestation. By teaching people about the importance of vegetation. Through rotational grazing. Through controlled harvesting of plants in the environment. **Ways of caring for vegetation in the environment.** By watering plants during the dry season. By thinning vegetation. By adding manure to the soil. By pruning plants. By weeding the crops. Through rotational grazing. Ways of caring for vegetation. Through afforestation. By pruning plants. Through reafforestation. Through rotational grazing. By watering plants in the environment. Through practising agro-forestry. By manuring plants. **Note:-**				

		National Environment Management Authority (NEMA) is the body responsible for conservation of the environment in Uganda. National Forestry Authority (NFA) is the body responsible for conservation of forests in Uganda. NEMA is under the Ministry of Water and Environment. **How NEMA conserves the environment**. It teaches people about the importance of forests and swamps. It evicts people settling in forest reserves. It creates forest reserves. It enforces laws against wetland degradation. **Importance of conserving vegetation**. It controls global warming. It controls soil erosion. It controls drought. It promotes tourism. It conserves the natural habitat for animals. It ensures constant supply of wood fuel, crafts raw materials, herbal medicine. It conserves the natural beauty of the environment
