TERM TWO PRIMARY SIX BREAKDOWN.

SESSION	COMPETENCE	CONTENT	METHODS	RELEVANCY	LESSON ACTIVITY	SCENARIO
1	✓ Identifies natural resources (map showing natural resources in EA)	A Resource is any component of the environment that can satisfy man's needs Resources are classified into two categories: natural and man-made. Examples of resources. Land People Computers Wind/ air Cars Telephones. Water Sunshine Buildings Minerals Animals Natural resources are things in the environment that exist o own and can be used to satisfy man's needs. Types of natural resources. Renewable resources Non-renewable resources. Renewable resources are things that are used to satisfy man's needs that can not get exhausted when used. These resources cannot be used up when used. Renewable resources can be replaced naturally when used. Renewable resources are also referred to as inexhaustible resources. Examples of renewable resources. Land Water Wind People Sunshine Animals	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner know more about the different components of the environment and how they are of value to man.**	**1. Giving the meaning of a resource** **2.identifying different examples of resources.** **3.mentioning the types of resources** **5.defining the two types of resources.**	**community school home industries. etc**

		Non-renewable resources are things that are used to satisfy man's needs and can be exhausted when used. These resources can get used up when people use them. Non-renewable resources cannot be replaced naturally after use. Non-renewable resources are also referred to as exhaustible resources. Examples of non-renewable resources. Fossil fuels Minerals, e.g., petroleum, sand, gold, etc. **Note: -***Man-made resources* ***are things made by man and are used to satisfy man's needs. e.g., cars, aeroplanes, telephones, computers, trains, etc.***				
		LAND AS A RESOURCE. Land is the part of the Earth's surface that is not covered by water. Most of the other resources are found on land. Land is referred to as the most important resource because most of man's activities are carried out on it. Examples of resources found on land. Plants People Animals Minerals Importance of land. Land is used for road construction. Land is used for constructing industries and factories. Land is used for rearing animals. Land is used for setting up recreation centres, e.g., playgrounds, theatres, etc. Land is used for burying the dead. Land is used for settlement Land is a source of income when sold Land is a home for some animals	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner, understand the value of land as a resource and how it can be used to improve life.**	**1. giving the meaning of land.** **2. identifying why land is the major resource.** **3.giving different values of land to man.** **4. mentioning the different resources found on land.**	

		Land is used for cultivation/crop growing LAND DEGRADATION. Land degradation refers to the improper use of land, resulting in a decline in its quality and productivity. Ways people misuse/ degrade land. Through deforestation. By dumping non-biodegradable materials on land By carrying out overgrazing. Through over-cultivation. Through uncontrolled mining. Through swamp drainage. Through bush burning. Activities carried out by people that degrade the land. Deforestation. Swamp drainage. Overgrazing. Mining. Over-cultivation. Bush burning. Note: -*The above activities leave the land bare by exposing it to the agents of soil erosion.* Effects of misusing land. • It leads to soil exhaustion (loss of soil fertility). • It leads to soil erosion. • It leads to land pollution. LAND CONSERVATION. Land conservation is the act of protecting land from losing its quality and productivity. Ways of protecting/ conserving land. By mulching land. By applying it with manure and fertilizers to make it fertile. Through afforestation. Through bush fallowing. By terracing, contour ploughing and strip cropping. By carrying out rotational grazing. By treating industrial wastes before being released on land. By practising land consolidation . Note: *Land consolidation is the process of putting together small pieces of land to form a big piece.* *Land fragmentation is the division of land into small plots.*				

		Land fragmentation is very common in Kigezi sub-region in South Western part of Uganda due to a high population density in that area Activities undertaken by individuals to conserve land. Afforestation. Strip cropping. Re-afforestation. Mulching. Terracing. Agro-forestry. Contour ploughing.				
2	✓ Identifies natural resources (map showing natural resources in EA) Describes mountains, rift valley in EA	FOREST RESOURCES. A forest is a group of trees growing together on a large piece of land. Forest resources are things obtained from forests that can satisfy man's needs. Forestry is the growing and caring of trees. Examples of forest resources. Timber. Latex from rubber trees. Herbal medicine. Linen from flax trees. Wood fuel. Bark cloth from the Ficus tree (mutuba). Tannin from wattle trees. it is used by leather tanning industries to soften leather. Products are made from latex. Car tyres. Gloves Erasers. Condoms. Rubber balls. Rubber shoe soles. Types of forests. Natural forests. Planted forests.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand more about forests as a resource and how they sustain man.**	**1. defining a forest** **2. mentioning different examples of forest resources** **3.describing different types of forests**	**economic activities.** **environment** **climate of an area.** **wildlife** **products used in the community**

Natural forestsNatural forests are groups of trees that grow on their own.

Types of natural forests.
Tropical rainforests.
Mangrove forests.

TROPICAL (EQUATORIAL) RAINFORESTS.
They grow near the equator.
These areas receive heavy rainfall and abundant sunshine throughout the year, which favours these forests to grow.
These forests are called rainforests because they grow in areas that receive plenty of rainfall throughout the year.

Examples of tropical/natural forests in East Africa.

Kenya	Tanzania	Rwanda	Buru
Aberdares Karura Kakamega Sokoke Cherangani Bunyala Arabuka Loita Mau	Rushosho Minziro Champesha Ngenzi Jozani Kaninga Kimboza	Mukura Buhaga Nyungwe Gishwati Busaga Chamudongo	Baru Kigw Kibir Mutu

Tree species that are common in tropical rainforests/ natural forests.
Mahogany
Ebony
African walnut
Mvule
Green heart
Teak
Rosewood

Products are/ obtained from hardwood trees.
Wooden tables
wooden windows
cupboards
Benches

		Wooden chairs wooden doors <u>Characteristics of natural forests</u>. Trees are evergreen. This is because they grow in areas that receive plenty of rainfall and have fertile soils. They have a thick undergrowth. This thick undergrowth makes them impenetrable. Trees take a long time to mature. Trees grow tall to compete for sunlight. Trees have broad leaves. These broad leaves increase the rate of transpiration. Trees produce hardwood. Trees form a canopy. Trees have buttress roots to hold them firmly in the soil. Trees are of different species. Note: *A canopy is a layer of branches and leaves that **forms** a cover **over** the ground. It forms an umbrella-like shape.* <u>Economic activities are commonly done in equatorial/ tropical rainforests</u>. Lumbering. Tourism. Herbal medicine collection. Fruit gathering. Charcoal making.				
3	✓ Identifies natural resources (map showing natural resources in EA)	<u>MANGROVE FORESTS</u>. These are forests that grow in the salty waters along the coast of East Africa.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner, understand more about the mangrove forests**	**1.defining mangrove forests** **2.mentioning characteristics of mangrove forests giving the different importance of mangrove forests.**	**economic activities.** **environment** **climate of an area.** **wildlife** **products used in the community**

		They are also called mangrove				

		swamps because they grow in seawater. Characteristics of mangrove forests. They produce hardwood timber. They provide waterproof timber, which is used for making boats and ships. They have buttress roots above the ground. They grow in areas with plenty of salty water. They are evergreen. The buttress roots help trees to stand firmly in water. Importance of mangrove forests. They provide hard wood timber. They provide water proof timber for making boats and ships. They help to trap mud which protects the low-lying coast from the sea erosion.				
	✓ game parks and crops on the map of EA Animals (domestic, wild and game parks	Types of animals. -Domestic animals. -Wild animals. Domestic animals: These are animals reared and kept at home. Examples of domestic animals. - Rabbits – sheep - cattle - goats - pigs – donkeys – camels - dogs. Importance of keeping domestic animals. They provide milk, e.g., cows, goats, camels. Some provide meat, e.g., goats, cattle, camels. Some domestic animals provide security/ guard our homes, e.g., dogs. Some domestic animals are used for ploughing our gardens, e.g., oxen. Some domestic animals are used for carrying goods, e.g., donkeys, camels, and horses. Some domestic animals provide hides and skins. They are a source of income when sold. Some domestic animals are used for paying bride price, e.g., cattle, goats. Note: *-Pack animals are animals that are used for transport.* Reasons why some people do not keep domestic animals. They are expensive to buy and maintain. Some people lack land for keeping domestic animals.	**guided group discussion** **brain storming** **guided discovery** **guided discussion**	**To enable the learner understand more about game parks, animals and different crops grown in EA.**	**1.mentioning different types of animals.** **2.giving reasons why people rear animals.** **3.mentioning different types of wild animals.**	**community** **economic activities done by people**

		Some religious beliefs forbid some people from keeping some animals, e.g. Muslims are not allowed to rear pigs. Domestic animals are tiresome to look after **i.e.,** giving them food and medical care. Wild animals. Wild animals are animals that live on their own in the natural environment They live in forests, bushes, water bodies, and swamps. Examples of wild animals. lions, elephants, leopard buffaloes, hippopotamuses, giraffe, rhino, warthog, gorilla, snake zebra, chimpanzee. Types of wild animals Carnivorous animals (flesh-eating animals), e.g., lions, leopards, tigers, etc. Herbivorous animals (feed on vegetation), e.g., kob, antelope, zebra, elephant, etc. Omnivorous animals (animals that feed on both flesh and grass) gorillas, monkeys, baboons etc.				
4	✓ game parks and crops on the map of EA Animals (domestic, wild and game parks)	WILDLIFE IN EAST AFRICA. Wildlife refers to animals, birds, plants, and insects that live on their own in the natural environment The Uganda Wildlife Authority (UWA) is responsible for the conservation of wildlife in Uganda East Africa's wildlife is conserved in game parks, game reserves, zoos, marine parks, bird parks, sanctuaries, etc NATIONAL PARKS IN EAST AFRICA. UGANDA Murchison Falls National Park. Queen Elizabeth National Park Kidepo Valley National Park. Mountain Rwenzori National Park Mountain Elgon National Park. Lake Mburo National Park Kibaale National Park. Bwindi Impenetrable National Park Mgahinga National Park. Semliki National Park KENYA	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand more about game parks, animals and different crops grown in EA.**	**.mentioning different types of animals.** **2.giving reasons why people rear animals.** **3.mentioning different types of wild animals**	**community** **economic activities done by people**

Tsavo National Park. Sibilol National Park
Aberdare National Park. Lake Amboseli National Park
Mountain Kenya National Park. Lake Nakuru National Park.
Longonot National Park

<u>TANZANIA.</u>

Serengeti National Park. Kilimanjaro National Park
Lake Manyara National Park. Tarangire national park
Ruaha national park, Mikumi national park.
Mahale Mountains National Park.

<u>RWANDA</u>

Volcanoes national park, Akagera national park
Nyungwe Forest National Park

<u>BURUNDI</u>

Ruvubu national park Kibira national park

Note:
Ruaha national park is the largest national park in East Africa.
Tsavo national park is the largest game park in Kenya.
Murchison falls national park is the largest national park in Uganda.

<u>Major tourist attraction in selected East Africa's</u>

National park	*Major tourist attraction*
Murchison falls	Crocodiles/ Murchison falls
Queen Elizabeth	Hippopotamuses
Kidepo valley	Ostriches
Lake Mburo	Zebra
Mgahinga	Mountain gorillas
Bwindi impenetrable	
Tsavo	Lions
Lake Nakuru	Flamingo birds
Serengeti	Wildebeests

<u>national parks</u>.

<table>
<tr>
<td></td>
<td></td>
<td>A Game reserve is a large area of land gazetted by the government for future expansion of game parks.

Controlled hunting can be allowed in a game reserve after seeking permission.

<u>Examples of game reserves in East Africa</u>.
<table>

<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><u>Importance of national parks</u>.
They create job opportunities for people, e.g., the game rangers.
They earn income through attracting tourists.
They promote the development of infrastructures, e.g., hotels, roads.
They are used for education and scientific research.
They help to preserve wildlife for future use.
They promote international relationships.

<u>Activities that commonly take place in East Africa's national parks</u>.
Animal tracking
Game drives
Mountain climbing
Boat rides.

<u>Prohibited/ illegal/ unauthorised activities in national parks</u>. • Animal grazing
Hunting
Crop cultivation
Human settlement

<u>Problems facing national parks in East Africa</u>.</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</table>

		Poaching Political instability in some parts of the East Wild bushfires fires Africa. Drought Outbreak of animal diseases. Outbreak of diseases a) <u>Poaching</u>. This is the illegal hunting of animals in national parks. It leads to the extinction of animal species in national parks. Poaching reduces the number of animals in national parks. <u>Why do people carry out poaching</u>? To get meat. To get horns and ivory from them. To get hides and skins. To sell meat and get money. b) <u>Prolonged drought</u>. It dries pasture on which animals feed. It also destroys the natural habitats for animals. c) <u>Bushfires</u>. They destroy habitats for animals. They destroy pasture for animals. They lead to the death of animals. d) <u>Outbreak of animal disease</u>. Diseases lead to the death of animals in national parks. e) <u>Human encroachment on national parks</u>. It leads to the displacement of wild animals. f) <u>Political instability in some parts of East Africa</u>. It leads to the death of animals in national parks. It leads to the displacement of animals in national parks. It leads to the destruction of natural habitats for animals. <u>Possible solutions to problems facing national parks in East Africa</u>. By enforcing laws against poaching. By sensitising people about the importance of wildlife. By improving security in areas near national parks. By extending veterinary services in national parks. By enforcing laws against human encroachment on national parks.				

		Ways of caring for animals. By protecting animals from poachers. By feeding them. By treating them. By preserving their natural habitats. By providing security to wild animals, e.g., using the game wardens and game rangers. Note*: Game wardens protect wildlife in national parks and also control fires from destroying animals and plants.*				
5	Describes tourism in East Africa Describes tourism in East Africa	Tourism is the movement of people to places of interest for pleasure, enjoyment and study purposes. Tourism is one of the most important industries in East Africa. A tourist is a person who travels to places of interest for pleasure, enjoyment and study purposes. Types of tourists. ▯ Local/ domestic tourists. ▯ Foreign/ international tourists. Note: *Local tourists move from one part of the country to another for tourism, while foreign tourists move from one country to another for tourism.* Services provided to tourists. ▯ Accommodation. ▪ Transport ▯ Entertainment ▪ Communication ▪ Health service ▪ Water service ▪ Security ▪ Food and drinks Why is tourism called an industry? It is a source of income. It creates job opportunities for people. Tourism is called an invisible trade because it generates income without exchanging physical goods. Tourism is called an invisible export because it generates income without exporting physical goods. Other invisible exports.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the tourism sector in Uganda and its values to the , social ,political ,economic developmen t**	**1.giving the meaning of tourism** **2.mentioning the types of tourists.** **3.explaining why tourism is called an industry** **4.giving the advantages of the tourism sector to the EA states.**	**community** **states** **economic activities done by the people of EA.**

		Education Electricity Technology <u>Factors that promote tourism in East Africa</u>. Improved transport and communication network. Improved peace and security. Presence of many tourist attractions. Good accommodation facilities. <u>Tourist attractions in East Africa</u>. Wildlife People's culture. • Vegetation Historical sites beautiful beaches Physical features Climate <u>Importance of tourism</u>. It creates job opportunities for people. It promotes the development of infrastructures, e.g., roads, hotels, lodges. It promotes international relations. It provides a market for locally manufactured products. It promotes conservation of wildlife and cultural sites. It is a source of government revenue. It earns foreign exchange from foreign tourists. <u>Problems facing the tourism industry in East Africa</u>. Poor transport network. Poor accommodation facilities. Insecurity in some parts of East Africa. Poaching. Shortage of funds to promote the tourism industry. Outbreak of epidemic diseases in the region e.g., Covid-19, Ebola etc. Low level of advertisement of East Africa's tourist attractions. ❖ Limited tourist attractions in some parts of East Africa. Note: *Kenya's tourism industry is more developed than that of Uganda because* • *Kenya has **a** better transport network than Uganda.* • *Kenya has better accommodation facilities than Uganda.* • *Kenya has more tourist attractions than Uganda.*				

		Possible solutions to the above problems. The government should improve on the transport and communication network. By building and maintaining good hotels. By advertising the tourist attractions globally to attract more tourists. The governments should ensure peace and security in the region. By preserving more tourist centres, e.g., game parks. By training more game rangers. Dangers of tourism. Some tourists come as spies. Tourism can bring about the spread of diseases in the country. Tourism can bring about change in culture. Some tourists teach people anti-social behaviour.				
6	Climate (sunshine and rainfall)	Climate is the average weather condition of a place recorded for a long time. Climatology is the scientific study of climate. A climatologist is a scientist who studies climate. A climatic region is a large area that experiences the same/similar weather patterns. **The climatic regions of East Africa include the following;** Equatorial climatic zone. Tropical (Savannah) climatic zone Semi-desert/ Semi-arid climatic zone Mountain/ Montane climatic zone Coastal climate. The weather is the state of the atmosphere of a place at a given time. Meteorology is the scientific study of weather. A meteorologist is a scientist who studies weather. Elements of weather are measured and recorded at a weather station/ meteorological centre. The biggest meteorological centre/ weather station in Uganda is the Entebbe Meteorological Centre. Weather forecasting is the telling of the expected future weather conditions of an area. Importance of weather forecasting. It helps farmers to plan their farm activities well. e.g., Planting, harvesting, etc. It helps travellers to prepare for their journeys.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the different elements of climate and weather.**	**1.giving the meaning of climate** **2.identifying the different climatic regions in EA** **3.identifying the values of different values of different elements of weather.**	**economic activities done by people** **environmental changes**

It helps pilots and sailors to avoid air and water accidents.

Main aspects of climate.

• Rainfall • Temperature

Types and conditions of weather.

Type of weather	*Condition of **the** weather*
Rainy weather	Rainy
Windy weather	Windy
Cloudy weather	Cloudy
Sunny weather	Sunny

Elements of weather / factors of weather

Rainfall Humidity
Cloud cover, Sunshine Wind, Air pressure

Importance of different elements of weather.

(a) WIND AS A RESOURCE.

Wind is air in motion/ moving air.

Importance of wind.

Wind helps in rain formation.
Wind helps farmers in winnowing seeds.
Winds help in driving some boats.
Wind can be turned into power by windmills. Windmills are mainly used in Karamoja to pump water and mill grains.
Wind helps in flying kites and balloons.
Wind helps our clothes to dry faster.
Winds help in pollution.
Wind drives away bad smells.

Dangers of wind.

Strong winds can blow off the roofs of our houses.
Wind causes soil erosion.
Strong winds may force boats to capsize on lakes and rivers.
Wind pollutes the atmosphere by raising dust.
Wind drives away clouds that would bring rainfall.

(b) RAINFALL AS A RESOURCE.

Rainfall is the amount of rain received in a particular area.
Rain is the main source of water in the environment.

Types of rainfall.

Convectional rainfall (received mostly around forests and large water bodies)
Cyclonic rainfall/ Frontal rainfall (received mostly in plateau areas)
Relief/Orographic rainfall (received mostly in highland areas)

Importance of rainfall.

		Rainfall provides water for domestic use. Rainfall helps plants to grow well. Rainfall reduces dust in the environment. Rainfall increases water volume in water bodies. Rainfall cools the environment. Rainfall softens the soil for easy cultivation. <u>Dangers of much rainfall.</u> Much rainfall causes floods. Heavy rainfall causes landslides. It leads to soil erosion. It makes murram roads muddy and slippery. Heavy rainfall leads to the destruction of property. Heavy rainfall destroys farmers' crops. (c) <u>SUNSHINE AS A RESOURCE</u> The sun is the main natural source of light in the environment. East Africa receives abundant sunshine throughout the year. This sunshine is tapped and utilised by many people in East Africa in the form of solar energy. <u>Importance of sunshine.</u> It dries harvested crops. It provides light. It is a source of Vitamin D. It dries our clothes. It helps in the generation of solar energy. <u>Solar energy projects in Uganda.</u> Kabulasoke solar plant in Gomba. Soroti solar plant at Opuyo-Soroti. Tororo solar plant <u>Dangers of sunshine.</u> Strong sunshine leads to drought. It dries up water bodies. It dries pasture for animals. It causes high temperatures in the environment. It causes dust in the environment. It dries crops in the garden before they are ready for harvesting. (d) <u>CLOUD COVER.</u> These are solid drops of rain in the atmosphere. <u>Importance of clouds.</u> Clouds protect us from direct sunlight. Some clouds give us rain, e.g., Nimbus clouds. Clouds regulate world temperatures. Clouds keep the Earth warm at night.				

7	Vegetation (forests and crops)	Cultivation is the growing of crops either for commercial purpose or home use. Crops are plants that are grown by people for food or sale. Types of crops grown in East Africa. • Non-traditional cash crops. • Traditional cash crops. (i) Non-traditional cash crops. Non-traditional cash crops are crops which were originally grown for food but now can be sold. Examples of non-traditional cash crops - Maize – millet – beans - cow peas - pineapples – sorghum – Soya beans - sweet potatoes - Irish potatoes – cassava. Reasons why people grow non-traditional cash crops. • To promote food security. • To get money after sale. (ii) Traditional cash crops. Traditional cash crops are crops grown mainly for sale. Examples of traditional cash crops. - Coffee - cotton - tea - tobacco - sugar cane - cocoa - Cashew nuts - sisal - pyrethrum - cloves. Importance of growing traditional cash crops. They are source of raw materials to Agro-based industries. They earn income to people after sale. They are source of employment to people. Types of farming. • Arable farming. • Livestock farming. • Arable farming is the growing of crops • Plantation farming. (a) SUBSISTENCE FARMING. This is the growing of crops and rearing of animals mainly for home use and the surplus is sold. It is the commonest system of farming practised in East Africa.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner, understand the plant cover and its value to man**	**1.giving the meaning of cultivation.** **2.mentioning the types of crops and their relevant examples.** **3.mentioning reasons why people grow crops.** **4. describing the different systems of crop growing.**	**economic activities** **home** **community**

		Annual crops like maize, millet, beans, sorghum, sweet potatoes, yams, ground nuts, Iris potatoes are usually grown in subsistence farming. Note: Annual *crops are crops that take a short time to mature (usually less than one year)* Methods of cultivation used in subsistence farming. Shifting cultivation Bush fallowing Mixed farming Advantages of subsistence farming (why is subsistence farming commonly carried out). It is cheap since it requires less capital. It requires a small piece of land. It needs simple tools. It requires little labour that can be provided by family members. Disadvantages of subsistence farming. It earns less income since most of the produce is eaten as food. There are low crop yields since it is practised on small farms. It deprives the government income. (b) PLANTATION FARMING. This is the growing of one perennial crop on a large scale mainly for sale. It is also called estate farming. Perennial crops are crops that take a long time to mature and are harvested several times (usually more than one year) eg. cotton, tobacco, oil palm, cloves, cocoa, vanilla, bananas, sugar cane, tea etc. Perennial crops can also be plantation crops. Advantages of plantation farming. There is a continuous harvesting. It is a source of employment to people. It is a source of raw materials for Agro based industries. A farmer earns high yields and much income. Disadvantages of plantation farming. It is expensive to start and manage. It requires a very big piece of land. It requires skilled labour. It is risky to depend on only one cash crop. It may lead to losses in case of low prices or poor climatic conditions. Characteristics of plantations. A lot of machinery is used. Scientific methods of production are used. One perennial crop is usually grown. Plantations cover a large area of land. A lot of capital is invested. Importance of plantation farming. It creates employment opportunities to people.				

<table>
<tr>
<td></td>
<td></td>
<td>It is a source of raw-materials for Agro-based industries.
It is a source of government revenue.
Plantations are used for research and study purpose.
Note: Agro-based industries are industries that use agricultural produce as their raw materials.

(c) <u>MIXED FARMING.</u>
<u>Mixed farming</u> is the growing of crops and rearing of animals on the same piece of land.
<u>Advantages of mixed farming.</u>
Farmers gets double income.
The farmer can get manure for his crops from animals.
Animals can easily depend on crops for food.
A farmer gets a balanced diet.
<u>Disadvantages of mixed farming.</u>
It is expensive to start and manage.
It requires skilled labour.
Animals can easily escape and destroy the crops.
It requires a large piece of land.
Note:
<u>Shifting cultivation</u> is the changing of crops from one piece of land to a new piece of land.
<u>Advantages of shifting cultivation</u>.
It helps the land to regain its fertility.
It helps farmers get high crop yields.
It helps to control pests and diseases on the farm.
<u>Bush fallowing</u> is the leaving of the exhausted land for some time to rest in order to regain its fertility.</td>

				• Presence of reliable rainfall • Presence of cool climate		**think pair share method.**		
			Robusta coffee	• Presence of fertile soils • Presence of reliable rainfall • High temperature	• Central region of Uganda in districts like Mpigi, Mukono, Wakiso, Nakasongola etc.			
		Advantages of clonal coffee over other types. It matures faster than other types of coffee. It produces high yields compared to other types of coffee. It is more resistant to diseases than other types of coffee. It weighs heavier than other types of coffee. It has a good smell making it of a higher quality than other types. It is more resistant to harsh weather conditions compared to other types of coffee. Uses of coffee. It is used for making beverages. It is a source of raw-material to coffee processing industries. It is a source of income when sold. Coffee stems and branches provide fire wood. Coffee growing provides employment opportunities to people. Products got from coffee. Beverages Gun powder Coffee husks. Problems facing coffee production in East Africa. Fluctuation of coffee prices. Outbreak of coffee diseases and pests. Competition on the world market. Limited capital to coffee farmers.					

		Prolonged drought. Poor farming methods. <u>Possible solutions to the above problems</u>. The government should provide soft loans to coffee farmers. The government should provide better quality coffee seeds to farmers. By spraying using pesticides. By teaching coffee farmers better farming methods. By carrying out irrigation in case of drought. Note: *The <u>Uganda Coffee Development Authority</u> (UCDA) is responsible for improving the quality of coffee in Uganda.* <u>(b) Cotton growing in East Africa.</u> Cotton is used by textile industries to make clothes. <u>Kenneth Borup</u> was a missionary who introduced the fast-growing cotton seeds in Uganda. This cotton seeds were called the <u>American upland cotton</u>. <u>Sir Hesketh Bell</u> encouraged cotton growing in Uganda. Cotton is mainly grown in Namasagali, Pallisa, Kasese, Nebbi, Soroti, Tororo, Busia, Southern Nyanza, Kisumu etc. Cotton is harvested by hand picking. <u>Conditions/ factors favouring cotton growing in East Africa</u>. Presence of moderate rainfall. Presence of well drained fertile soils. Presence of high temperatures. <u>Reasons why the British encouraged Ugandans to grow cash crops</u>. They wanted to get raw materials for their home industries. They wanted the local people to get income to pay taxes. Note: *Textile industries are industries that use cotton as a raw material e.g., NYTIL-Nyanza Textile Industries Limited.* <u>Steps taken when processing cotton</u>. Ginning				

		Spinning Weaving Ginning: This is the removal of cotton seeds from lint at a ginnery. A ginnery is a place where cotton seeds are separated from lint. Spinning: This is the turning of lint into threads. Weaving: This is the making of cloth from threads. Uses of cotton. Cotton exports earn foreign exchange to a country. It used for making clothes. It is a source of raw materials for textile industries. Cotton growing provides employment to people. Cotton seeds can be used for making cotton wool used for medical purpose. Cotton seeds can be used for making cooking oil. Cotton husks can be used as food fuel. Products got from cotton. Clothes Cotton wool Threads Cooking oil Problems facing cotton growing in East Africa. Fluctuation of cotton price. Competition on the world market. Loss of soil fertility. Shortage of capital. Limited labour on cotton plantations. Prolonged drought. Limited market for cotton. Note: *Cotton Development Organisation (CDO) is the body responsible for monitoring the production, quality, processing, and marketing of cotton in Uganda.*				
9	✓ game parks and crops on the map of EA	Tobacco growing in East Africa. Tobacco is mainly grown in the West-Nile sub-region of Uganda. Tobacco is used for making cigarettes. It grows well in areas with reliable rainfall and moderate temperatures. Methods of preserving tobacco. • Flue-curing method. • Fire-curing method.	**guided group discussion brain storming**	**To enable the understand the different cash crops grown in East Africa**	**.identifying the different major cash crops grown by people in the community.**	**community homes economic activities**

	Animals (domestic, wild and game parks)	• Air-curing method. Uses of tobacco. ✞ It used for making cigarettes, snuff. ✞ It creates employment for people. ✞ It is a source of income to farmers. Note: o *British American Tobacco (BAT) is responsible for buying and processing tobacco in Uganda.* o *Tobacco growing in West Nile has greatly reduced because many people grow alternative crops such as coffee, rice, beans and ground nuts which earn them more income than tobacco.* Products got from tobacco. • Cigarette Snuff It is mainly grown in Kalangala on a large scale by the BIDCO oil company. Oil palm nuts provide palm oil which is used for making candles, palm wine, soap, margarine and cooking oil. In Uganda, oil palm is mainly grown in Kalangala and in areas around the shores of Lake Victoria. Oil palm requires heavy rainfall, fertile soils and warm tropical climate. It is harvested by cutting branches. **(d)**Cloves growing in East Africa. Cloves were introduced by Seyyid Said in the areas of Zanzibar, Pemba and Mafia. Zanzibar is the leading producer of cloves in East Africa. Flowers obtained from cloves are used to make perfume, spices and food flavours. Conditions/ factors favouring cloves growing in East Africa. Presence of plenty of rainfall. Presence of high temperatures. Presence of well drained soils. **(f)**Pyrethrum in East Africa. Pyrethrum is used for making insecticides. Pyrethrum is mainly grown in Kenya on a large scale. It is also grown in Tanzania around Mbeya near Arusha and around the slopes of mountain Meru. In Rwanda, it is grown at Ruhengeri. Pyrethrum is mainly grown in areas with high altitude. **(g)**Sugarcane growing in East Africa. Sugarcane is used for making sugar.	**guided discovery** **guided discussion** **think pair share method.**	**and their values.**	**2.giving different values of cash crops grown by people in the community.**	**done by people.**

		Sugar cane is mainly grown on a large scale at Kilombero valley irrigation scheme in Tanzania. It is also grown on the shores of Lake Victoria at Kakira in Jinja district, Sango Bay in Rakai, Kinyara in Masindi district, Kisumu, coastal province in Kenya, around Bukoba, Mwanza, Moshi, Arusha, Central coastal plain and Kilombero valley in Southern Tanzania and Rutongo in Rwanda. Examples of sugarcane plantations in Uganda. Kakira sugarcane plantation. Kinyara sugarcane plantation. Lugazi sugarcane plantation. Conditions/ factors necessary for sugarcane growing. Presence of hot and humid climatic conditions. Presence of well distributed annual rainfall. ppresence of fertile soils. Importance of sugarcane growing in East Africa. It provides raw materials to sugar processing industries. It has promoted the development of roads. Sugarcane is a source of income to farmers when sold. Sugarcane plantations can be used in research and study purpose. Sugarcane leaves are used for mulching. It creates employment opportunities for people. It is a source of government revenue through taxing the sugarcane plantation owners. (h) Tea growing in East Africa. Tea is used as a beverage. Tea in East Africa is grown on a large scale at Kericho in Kenya. In East Africa, Kenya is the leading producer of tea, followed by Uganda. Tanzania produces less tea due to the dry conditions. Tea is harvested by plucking the leaves. Examples of tea estates in East Africa. Igara tea estate Kayonza tea estate Muzizi tea estate Kericho tea estate Kasaku tea estate Conditions/ factors that favour the growing of tea in East Africa. Presence of acidic soils. Presence of reliable rainfall. IRRIGATION FARMING IN EAST AFRICA. Irrigation is the artificial supply of water on land to support crop growth.				

Irrigation farming is the system of crop growing where land is supplied with water by human means to support crop growing.
Irrigation scheme is an area of land which is supplied with water by human means to support crop growth.
Irrigation schemes are mostly set up in areas that do not receive reliable rainfall (dry areas).
These areas much be having reliable permanent sources of water.

Notable Irrigation schemes in Africa.

Mwea Tebere irrigation scheme for rice.
kilombero valley irrigation scheme for sugar canes.
Doho irrigation scheme for rice
Ongom irrigation scheme in Lira for citrus fruits.
Olweny swamp irrigation scheme in Lira for rice
Nsimbe and Rosebud irrigation schemes for flowers.

Irrigation scheme	*Source of water*	*District / count*
Doho	R. Manafwa	Butaleja
Mubuku	R. Mubuku And R. Sebwe	Kasese
Tilda (Kibimba)	R. Mpologoma	Bugiri
Sango Bay	L. Victoria	Rakai
Kakira	L. Victoria	Jinja
Lugazi	L. Victoria	Buikwe
Pabo	R. Achwa	Kitgum
Kiige	L. Nabigaga	Kamuli
Agoro	R. Agago	Lamwo
Kilombero valley	Kilombero/ Ulanga river	Tanzania
Mwea Tebere	R. Tana	Kenya

Common methods of Irrigation.

- Gravity flow method
- Overhead sprinkler method

Advantages of Irrigation farming.

- Crops are grown at any time of the year.
- It promotes food security in the country.
- Irrigation farming helps to put idle dry land into use.
- Crops grow well without being affected by sunshine.

Disadvantages of Irrigation farming.

- It is very expensive to practice.
- It is not possible where there is no reliable source **of** water.
- It leads to soil leaching.

Note: -*Leaching is the sinking of soil nutrients to deeper layers where plant roots can not reach.* Factors that have promoted Agricultural development in East Africa.

- Presence of fertile soils.

		✞ Presence of reliable rainfall. ✞ Availability of large market for agricultural produce. ✞ Improved transport and communication network. ✞ Political stability in most parts of Africa. ✞ Availability of ready market for agricultural produce. ✞ Presence of high labour force. <u>Contributions of Agriculture to East African countries.</u> ✞ It provides a source of food to people. ✞ It is a source of raw materials for Agro-based industries. ✞ Agricultural exports earn foreign exchange. ✞ It has promoted the development of infrastructure like roads, railways. ✞ It is a source of employment to people. <u>Problems facing crop farmers in East Africa.</u> ✞ Shortage of funds. ✞ Prolonged drought. ✞ Presence of crop pests and diseases. ✞ Limited local market for agricultural produce. ✞ Poor transport network in some parts of East Africa. ✞ Political instability in some parts of East Africa. ✞ Competition from other sectors e.g. mining, tourism, fishing. ✞ Fluctuation of prices for agricultural produce. ✞ Rural-urban migration which reduces labour force on farms in rural areas. <u>Possible solutions to the problems affecting agricultural development in Africa.</u> ✞ By providing small scale loans to farmers. ✞ By building better roads in different parts of Africa. ✞ By encouraging the use of irrigation farming. ✞ By promoting peace and security in all parts of Africa. ✞ By encouraging the use of pesticides and insecticides.				
10	✓ game parks and crops on the map of EA Animals (domestic,wild and game parks)	Livestock farming is the rearing of domestic animals. <u>Systems of livestock farming</u>. • Nomadic pastoralism • Cattle ranching • Dairy farming Nomadic pastoralism is the system of animal rearing where pastoralists move with their animals from one place to another looking for pasture and water. Nomadic pastoralists are sub divided into two groups. Namely; • True nomads • Transhumant. <u>True nomads</u>.	**guided group discussion** **brain storming** **guided discovery** **guided discussion**	**To enable the learner, understand live stock farming in EA.**	**1.defining livestock farming** **2. identifying systems of livestock farming** **3.describing the systems of livestock farming**	

		✙ True nomads are people who almost all the time move with their animals looking for water and pasture. ✙ <u>Tribes under true nomads in East Africa</u>. • Karimajongs • Turkana • Masai Note: *Transhumant are people who move with their animals due to changes in seasons to look for water and pasture eg The Fulani of Nigeria .* <u>Reasons why nomadic pastoralists move from one place to another</u>. ✞ To look for water for animals. ✞ To look for pasture for animals. ✞ To break the life cycle of disease vectors. <u>Problems faced by nomadic pastoralists in East Africa</u>. ✞ Outbreak of pests and diseases. ✞ Poor veterinary services. ✞ Prolonged drought. ✞ Attacks from dangerous animals. ✞ Shortage of water for animals. ✞ Cattle rustling. ✞ Shortage of pasture for animals. <u>Possible solutions to the above problems</u>. ✞ By constructing valley dams to provide water in dry areas. ✞ By growing fodder crops. ✞ By extending veterinary services to their areas. ✞ By disarming cattle rustlers. ✞ By spraying using insecticides and pesticides. Note: o *The main economic activity carried out in dry areas of East Africa is pastoralism.* o *The government of East African countries have disarmed the pastoral tribes in order to control cattle rustling amongst them.* o *The government has constructed valley dams in areas North Eastern Uganda in order to provide water to animals.*	**think pair share method.**			
		This is the rearing of cattle on a large scale for meat production. In East Africa Kenya has the most developed ranches. <u>Examples of ranches in East Africa</u> **Uganda** Kabula ranch Singo ranch Nyabushozi ranch Buruli ranch Kisozi ranch				

		Kenya Machakos ranch River Athis Thika ranch Nakuru ranch **Tanzania** Dodoma ranch Manyara ranch Mwanza ranch Tabora ranch **Characteristics of cattle ranching**. *a Boran bull on a ranch* Animals are mainly bulls. There is no communal grazing. There is usually one type of livestock kept. Modern methods of animal rearing are kept. **Similarities between ranching and nomadic pastoralism.** Both involve the use of natural pasture for rearing animals. Both involve rearing animals in large numbers. **Difference between ranching and nomadic pastoralism.** Ranchers keep animals for commercial purposes while nomads keep animals mainly for home use. Ranchers mind about the quality of animals, while nomads mind about the quantity of animals. One kind of animal is reared in ranching, while nomadic pastoralism involves the rearing of a variety of animals. Ranchers rear animals permanently on a ranch while nomads move with their animals from one place to another. **Importance of ranching**. Ranchers employ people. Beef exports earn foreign exchange. It is a source of raw materials for Agro-based industries. It helps to put idle land into use. **Problems facing ranches in East Africa.** ✞ Outbreak of animal diseases. ✞ Shortage of water and pasture. ✞ Limited market from local communities. ✞ Shortage of funds/ capital. ✞ Poor vete ✞ Shortage ✞ Shortage **Possible solutions to the above problems.** The government should provide soft loans to farmers.				

		The government should create both local and international markets for beef products. By improving on veterinary services. By growing fodder crops. By constructing valley dams to provide water				
11	✓ game parks and crops on the map of EA Animals (domestic, wild and game parks)	**DIARY FARMING** This is the rearing of cattle on a large scale mainly for milk production. In East Africa, dairy farming is mainly practised in the Kenya highlands. It was introduced by the White settlers under Lord Delamere. Factors favouring dairy farming in East Africa. Presence of cool climate which favours dairy farming. Presence of plenty of pasture for animals. The area is not greatly affected by disease vectors. **Areas where dairy farming is practised in East Africa**. *Uganda*: • Mbarara • Kiruhura • Kabale *Kenya*: • Kenya highlands • Slopes **Products got from a dairy farm.** - Milk - hides - wastes for manure - Beef - hooves **Examples of milk products.** Butter Yoghurt Ghee Cheese Characteristics of dairy farming. Dairy cows are mainly reared. It is mainly carried out in areas with cool temperatures. Calves are kept separately from cows in order to maximise milk production. Dairy farms cover a large area of land. Similarities between dairy farming and ranching. Both are practised for commercial purpose. Both involve keeping of one type of livestock. Both involve grazing of animals on a rotational basis. **Difference between dairy farming and ranching.** Cows are mainly reared on dairy farms while bulls are mainly reared on ranches. Dairy farming is practised mainly for milk production while cattle ranching is done for meat production.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner, understand more about dairy farming**	**1.defining dairy farming** **2. explaining factors that favor dairy farming**	

Highest peaks of major mountains in East Africa.

Mountain	*Type*	*Formation*	*Highest pea*
Mountain Kilimanjaro	Volcanic	Volcanicity	Kibo peak
Mountain Kenya	Volcanic	Volcanicity	Batian pea
Mountain Rwenzori	Block	Faulting	Margherit
Mountain Elgon	Volcanic	Volcanicity	Wagagai p
Mountain Mufumbiro	Volcanic	Volcanicity	Muhavura
Mountain Moroto	Volcanic	Volcanicity	Sokdek

Note:

Mountains are sources of rivers because mountainous areas receive plenty of rainfall and other mountains are covered by snow which melts to form rivers.

Snow in East Africa is found on the peaks of mountains; Kilimanjaro, Kenya and Rwenzori.

The highest peaks of these mountains cross the snow line.

The highest mountain in East Africa is Mountain Kilimanjaro, followed by mountain Kenya and mountain Rwenzori.

importance of mountains

They help in rainformation.
They have fertile soils which support crop cultivation.
They attract tourists who bring in income.
Some mountains are a source of minerals.
Some mountains are a source of rivers.
They have cool temperatures which favour dairy farming.
They are used by telecommunication companies to place on masts.
Some mountains form natural boundaries between countries. eg-
Mountain Rwenzori creates a natural boundary between Uganda and DRC. *-Mountain Elgon creates a natural boundary between Uganda and Kenya.*
-Mountain Mufumbiro creates a natural boundary between Uganda and Rwanda.

Disadvantages of mountains.

They hinder agricultural mechanisation.
They make road and railway construction difficult.
Some volcanic mountains erupt and destroy property.
They have steep slopes which promote landslides and soil erosion.

Problems faced by people living on slopes of mountains.

		Severe soil erosion. Poor ground transport. Too much coldness. Poor agricultural mechanisation. Landslides. ***<u>Why ground transport is very poor in highland areas</u>***. *It is difficult and expensive to construct roads in mountainous areas.* Note: *People living in highland areas (Kapchorwa) rear donkeys to use them as means of transport.* *Road transport can also be improved in highland areas by constructing winding roads.* *Landslides can be reduced in highland areas through planting trees.* ***<u>Why agricultural mechanisation is poor in mountainous areas.</u>*** *The steep slopes make the use of tractors difficult.* **<u>Possible solutions to the problems faced by people living in Highland areas</u>.** By constructing winding roads. By rearing donkeys. By wearing heavy clothes. By terracing the land to control soil erosion. By planting more trees to control landslides.				
12	✓ Identifies the different types of Minerals in EA (metallic, non-Metallic fuel minerals, examples of each type of mineral.) Describes the method (of mining eg open cast, underground	Minerals are valuable substances found on or below the earth's surface. <u>Types of minerals</u>. • <u>Metallic minerals</u>: These are minerals which can be melted to obtain new products. • <u>Non-metallic minerals</u>: These are minerals that do not form new products on melting. They may get broken when hit. • <u>Fuel minerals</u>: These are minerals that produce heat or power when burnt. <u>Examples of minerals</u>. *Types of minerals* | *Examples of minerals* Metallic | -copper -gold -iron ore -Nickle -aluminium -zinc Non-metallic | -phosphate -limestone -soda ash -clay -diamon Fuel | -crude oil -natural gas -coal -uranium <u>MINING IN EAST AFRICA</u>. <u>Mining</u> is the extraction of minerals from where they exist. A <u>mineral deposit</u> is an area where a particular mineral is found in large quantities. Minerals in their raw state are called ores. Tanzania has the largest number of mineral resources, followed by Kenya and Uganda, respectively.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand more about different types of minerals**	**1.defining a mineral** **2.mentioning different types of minerals** **3.descibing mining in East Africa.** **4.describes different types of minerals in East Africa.**	**economic activities done by people** **states**

	, drilling and quarrying ✓ Discuses problems faced in the utilizatio n of resources and gives solutions	Tanzania is East Africa's major mining country in terms of variety of minerals, quantity, and revenue. Major minerals mined in East Africa. • Uganda- limestone • Kenya – soda ash • Tanzania – diamond				

Mineral	*Mining area*	*Importance/use of miner*
Gold	• Karamoja, Mbeya, Kisumu, Kigoma.	✞ It is used for makin trophies.
Soda ash	• Lake Magadi in Kenya	✞ Used to make glass
Copper	• Kilembe in Kasese	✞ Used to make elect bullets etc.
Diamond	• Williamson mines Mwadui in Shinyanga	✞ Used in making dri ✞ Used for making ec glasses, padlocks a
Salt	• Lake Katwe • Lake Magadi in Kenya	✞ Used to add flavo Used to make animal
Crude oil	• Lake Albert (Albertine region)	✞ Used to make petr e.g. paraffin, grease
Phosphates	• In Tororo.	✞ Used to make artifi
Graphite	• Acholi	✞ Used to make penc
Lime stone	• Hima in Kasese • Osukuru hills in Tororo	✞ Used to make ceme

Types of mining.
- Traditional mining. This involves the use of simple tools to carry out mining.
- Modern mining. This involves the extraction of minerals on a large scale.

Methods of mining.
(i) Open cast mining.

- This method is used to extract minerals which are near the earth's surface.
- Minerals mined using open cast mining include; salt, soda ash, lime stone, diamond.

Advantages of open cast mining.
- ✞ It is very cheap to use.
- ✞ It is not very risky to miners.
- ✞ It requires less labour.

Disadvantages of open cast mining.

		✞ It leads to displacement of people due to expansion. ✞ It destroys the soil profile. ✞ It leads to environmental degradation. (ii) Shaft/ underground mining. ✚ This method is used to extract minerals found deep underground. ✚ Minerals are extracted from the underground by digging tunnels and shafts. ✚ The rock bearing minerals is extracted using explosives.eg. when extracting copper, cobalt etc. ✚ Underground method of mining is very expensive to use.				
13	discusses the importance of mineral (each mineral with importance with a mining area where its mined, Factors that have promoted the development pf mining industry, contribution of mining industry to the development of EA)	Problems associated with underground mining. ✞ Suffocation of miners. This is due to much heat and loss of fresh air. ✞ Flooding of mines. ✞ Landslides. ✞ Falling of the mines. ✞ High temperatures. (iii) Drilling method. ✚ This method is used when extracting minerals from the underground using long pipes. ✚ The drills are supported by the machines called derricks to reach the oil. The oil begins to flow out through the pipes. ✚ The oil in its natural form is called crude oil. It is black and thick. ✚ Crude oil is purified/ refined to get petroleum products. Note: o *In Uganda, crude oil is mined at Lake Albert and transported to Port Tanga in Tanzania for refining and then exported to the world market.* o *Crude oil is transported from Uganda to Tanzania through pipeline transport.* *An oil refinery is a place where crude oil is processed.* *In East Africa, oil is refined at Mombasa and Dar-es-salaam.* *Examples of oil wells in the Albertine region.* ▯ *Kingfisher oil well on the shores of lake Albert.* ▯ *Ngege, Kigogole and Kasememe oil wells in Buliisa.* ▯ *Mputa, Nzizi and Ngasa oil wells in Kaiso-Tonya, Hoima.* ▯ *Jobi and Lyec oil wells in Nwoya district.* ***How Ugandans will benefit from oil mining in the Albertine region.***	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand more about different types of minerals**	**1. mentioning problems associated with underground mining** **2. describing factors that have contributed to the development of the mining industry** **3.giving contributions of the mining industry.**	**economic activities done by people** **states**

	✓ Identifies and locates minerals on the map of EA Discusses problem faced in the mining of minerals in EA and suggests solution ✓ Discuses problems faced in the utilizatio n of resources and gives solutions	*Oil mining will create job opportunities to people.* *It will promote the development of roads.* *Ugandans will get oil products at a relatively cheaper cost.* *It will lead to development of towns.* <u>Factors that have promoted the development of the mining industry in some parts of East Africa</u>. Presence of many mineral deposits in different parts of East Africa. Political stability in most parts of East Africa. Availability of capital. Availability of both skilled and unskilled labour force. Availability of large market for minerals. Availability of reliable sources of energy. Improved transport and communication network in some parts of East Africa. High levels of technology. <u>Contributions of the mining industry to East Africa's development.</u> It is a source of foreign exchange to the government. It is a source of employment opportunities to people. It has promoted the development of roads and railway lines. It leads to urbanisation. It is a source of raw materials for industries. **<u>Problems facing East Africa's mining industry</u>**. Shortage of capital. Low levels of technology. Shortage of skilled labour force. Unreliable power supply. Mineral exhaustion in some areas. Competition from other sectors e.g., agriculture, fishing etc ✞ Poor transport network in different parts of Uganda. Mining activities are mainly done by foreign countries leading to profit repatriation (they take profits to develop their home countries). ✞ Mines may collapse and kill people. Note: *The above problems are the reasons why some minerals are not yet mined/ exploited in East Africa.* **<u>Possible solutions to the problems facing the mining industry in East Africa</u>**. By constructing better roads to the mining sites. By training more miners. The government should invest more money in the mining industry. By borrowing money from international institutions to invest in the mining industry.				

<table>
<tr>
<td></td>
<td></td>

		✞ **They have salty basement rocks. (because they experience a lot of evaporation) ❖ They have no outlet rivers.** **Note:-*Lake Katwe lies on the floor of the riftvalley but it is not considered to be a riftvalley lake because it was formed as a result of volcanicity*** **Examples of rift valley lakes.** In the Western arm of the rift valley **Lake Albert** **Lake George** **Lake Edward** **Lake Rukwa** **Lake Tanganyika** In the Eastern arm of the rift valley. **Lake Turkana** **Lake Natron** **Lake Magadi** **Lake Elementeita** **Lake Nakuru** **Lake Baringo** **Lake Eyasi** **Lake Manyara** Albertine Escarpment *in Uganda is the major escarpment of the Western rift valley, while Mau Escarpment in Kenya is the major escarpment of the Eastern rift valley* LAKE TANGANYIKA. It is the longest and deepest lake in East Africa. It forms a natural boundary between: Tanzania and Zambia, Tanzania and D.R.C., Burundi and D.R.C. Port Kigoma is the main inland port on Lake Tanganyika. It is a rift valley lake formed as a result of faulting.				

		LAKE TURKANA. - It was formerly known as Lake Rudolf. It forms a natural boundary between Ethiopia and Kenya. It is a rift valley lake formed as a result of faulting. It is found in the North Western part of Kenya. Note: *Lake Magadi is a rift valley, famously known for soda ash and salt mining in East Africa.* *Lake Nakuru is referred to as a sanctuary for flamingo birds.* CRATER LAKES These are formed on top of volcanic mountains. They are formed as a result of volcanicity Note:-*Most crater lakes are found in South Western Uganda because this region experienced volcanicity for a long time.* **examples of crater lakes in** Lake Katwe Lake Nyamunuka Lake Nyakasura Lake Ngorongoro in Tanzania. **Note:-*Lake Katwe is famous for salt production***				
15	✓ Lakes, seas and oceans in Africa) Discusses the importance of lakes, rivers and oceans to	**LAGOON LAKES** These are formed as a result of marine deposition. They are formed when sand or mud separates the sea water/ part of a lake **examples of lagoon lakes** Lake Nabugabo MAN-MADE LAKES. **They are formed as a result of dam construction.**	**guided group discussion** **brain storming** **guided discovery**	**To enable the learner understand the drainage features in East Africa and their values to man.**	**describing different lake formations**	**community** **economic activities** **personalities**

	the people of EA. (Economic activities carried out on lakes and rivers)	**They are formed when man constructs a dam along rivers.** **They can also be formed as a result of digging valley dams in swamps.** Most man-made lakes are usually small. Examples of man-made lakes**.** **Kabaka's lake** **Nyumba ya mungu on the river Pagani.** **Kindaruma Lake on the river Tana**. <u>LAVA DAMMED LAKES / VOLCANIC LAKES</u> They are formed when lava flows and blocks a flowing river (as a result of <u>volcanicity</u>) Then water collects behind to form a river. <u>Note</u>: *Lake Kivu is found in the Western arm of the rift valley, but not a rift valley lake* <u>*Examples of lava-dammed lakes*</u> Lake Bunyonyi (the deepest in Uganda) Lake Mutanda Lake Bulela Lake Kivu **<u>GLACIAL LAKES.</u>** These are lakes formed as a result of <u>glaciation.</u> East Africa has very few glacial lakes because it lies in the tropical areas, which do not experience glaciation. However, high mountains like Rwenzori, Kenya, and Kilimanjaro have glacial lakes nearby because they are snow-capped. <u>MAJOR RIVERS IN EAST AFRICA.</u> A river is a mass of flowing water in a channel on the Earth's surface. <u>Types of rivers</u> Permanent rivers	**guided discussion** **think pair share method.**			

		Seasonal rivers <u>Seasonal rivers</u> are rivers that flow during the wet season and dry up during the dry season, eg, River Lagh Bor and River Lagh Bogal in Kenya. <u>Permanent rivers</u> are rivers that flow throughout the year. <u>Permanent rivers</u> are rivers that flow throughout the year. The major rivers in East Africa, below, are examples of permanent rivers <u>Uganda</u> River Nile River Katonga River Semliki River Kagera River Mpologoma River Manafwa River Sezibwa <u>Kenya</u> River Tana River Nzoia River Galana River Athi River Yala River Mara <u>Tanzania</u> River Rufiji River Pangani River Kagera River Ugalla River Rungwa River Ruvuma River Wami <u>Features found along river valleys.</u> Waterfalls Gorges Deltas Ox-bow lakes Estuaries				

16	✓ Lakes, seas and oceans in Africa) Discusses the importance of lakes, rivers and oceans to the people of EA. (Economic activities carried out on lakes and rivers)	<u>Reasons why some parts of the river Nile are not navigable.</u> Presence of waterfalls and rapids. Presence of floating vegetation/suds. Presence of dangerous aquatic animals. Some parts of the river Nile are shallow and narrow. <u>River Tana</u> It is the longest river in Kenya. It flows into the Indian Ocean. River Thiba and River Nyamindi are the main tributaries of River Tana. River Thiba supplies water to the Mwea Tebere irrigation scheme. (Famous for rice growing) The Seven Forks scheme was built on the river Tana. <u>Power dams were built along the river Tana.</u> Gitaru dam Kindaruma dam Kamburu dam Masinga dam Kiambere dam. <u>Activities carried out on and around lakes and rivers.</u> Fishing. Crop growing Tourism Transportation. Trading. Industrialisation. <u>Importance of lakes and rivers</u> They help in rain formation. They are used as a medium for water They act as fishing grounds. transport. Rivers help in the generation of hydroelectricity. They form natural boundaries between They attract tourists who bring in income. countries. They are homes for aquatic animals. They provide water for irrigation, domestic, and industrial use. <u>Problems associated with water bodies in East Africa</u>. Drowning	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the drainage features in East Africa and their values to man.**	**describing different lake formations**	**community** **economic activities** **personalities**

		They harbour dangerous aquatic animals. Flooding They harbour disease vectors. Rivers and lakes hinder road and railway construction. <u>Problems faced by water bodies in East Africa</u>. Silting, which reduces the depth of water bodies. Overuse of water from lakes and rivers for irrigation. Drought, which lowers the water level. Dumping of wastes into water bodies. Overfishing.				
17	✓ Names the type of Fish (Largest fish, commonest fish, smallest, commonly caught in swamps, methods of preserving fish) Describes both traditional and modern methods of fishing (use of spears, bow and arrow, gillnet and trawling method, drifting)	<u>Fishing is the extraction of fish from water bodies.</u> Fishing in East Africa is conducted in rivers, lakes, oceans, and seas. Lake Victoria is the largest freshwater lake in East Africa. Nile perch is the largest fish species caught in East Africa, while Tilapia is the most common type caught. Other types of fish caught in East Africa include: lung fish, catfish, eel fish, starfish, and mud fish (mud fish is commonly caught in swamps). Fish caught in East Africa is sold locally to the consumers while some is exported to Europe and other continents. Traditional fishing methods used in Africa include: the use of baskets, hooks, spears, and bows, and arrows. Modern methods of fishing, such as, gill net method, trawling, the line fishing method, and drifting, are also used. Fish is preserved locally by smoking it, sun drying and salting it. Refrigeration and tinning/canning are the commonly used modern methods of fish preservation in East Africa. <u>Factors that have promoted the development of the Fishing industry in East Africa.</u> Availability of large fishing grounds. Availability of skilled and unskilled labour force. Availability of capital invested in the fishing industry. Availability of both local and international markets. High levels of technology have favoured the use of modern fishing methods eg, the trawling method.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the drainage features in East Africa and their values to man.**	**describing different lake formations**	**community** **economic activities** **personalities**

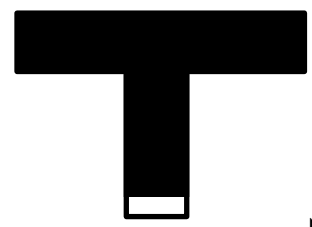

18	✓ Explains importance of fishing to people of EA (factors that have promoted fishing industry, contribution of fishing industry ✓ Discuses problem and suggests solutions related to fishing in EA (water hyacinth)	<u>Contributions of the Fishing industry to East Africa's development</u>. It is a source of employment opportunities for people. Exported fish earn foreign exchange for the government. It is a source of food for people. Fish is used as a raw material in fish processing industries. Fish is a source of income when sold. Fish is used for making drugs e.g., Cod liver oil. It promotes the development of ports and landing sites. <u>Problems facing the Fishing industry in East Africa.</u> Indiscriminate fishing (catching of young fish), which leads to the extinction of fish species. Water pollution, which kills fish. Presence of water hyacinth. Limited capital. Presence of fish predators. Fluctuation of fish prices. Cultural beliefs that discourage some people from eating fish. Limited local market for fish due to high levels of poverty among the population. <u>Dangers of water hyacinth.</u> It suffocates fish. It breaks fishing nets. It hinders water transport. It harbours some disease vectors. It blocks fishing grounds. <u>Ways of controlling water hyacinth.</u> By spraying it with chemicals. By using manual methods to remove it. By using machines to remove it. By introducing beetles to feed on it. <u>Possible solutions to the problems facing the Fishing industry.</u> By protecting fishing grounds from pollution. By encouraging foreign investors in Africa.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**			

		By enforcing laws against indiscriminate fishing. By teaching fishermen, the dangers of poor fishing methods. By encouraging people to practice fish farming. The government should provide fishermen with loans to invest in the fishing industry.				
19	Identifies the importance of different means of transport in EA (Cars, trains, pack animals, water vessels, Aeroplane's etc	• • Murram roads • Tarmac roads • (i) Murram roads. These are roads that are surfaced with soil and gravel. They are commonly found in rural areas and serve as feeder roads. Feeder roads are roads that link remote areas to main roads. Feeder roads help farmers in rural areas to transport their farm produce to market centres. Murram roads are common in East Africa because they are cheap to construct and maintain. Murram roads can easily be spoiled by bad weather. Murram roads become muddy and slippery during rainy weather and dusty in the dry season. (ii) Tarmac roads. These are roads that are surfaced with tar and stones. They are mainly found in urban areas/ developed countries. They are long-lasting, good for use in all weather conditions. However, they are expensive to construct and maintain. Major road networks in Africa that cross East Africa. The Trans -African highway The Great North Road The Trans-African highway.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the transport sector in East Africa**	**1. giving the meaning of transport** **2. describing different types of roads** **4. describing themajor road networks in East Africa.**	**community** **economic activities** **road users**

		It starts from Mombasa in Kenya through Nairobi, Uganda, the D.R.C., the Central African Republic, Cameroon, and ends at Lagos in Nigeria. It is also known as the Mombasa-Lagos highway The Great North Road. It starts from Cape Town in South Africa, passes through Botswana, Zimbabwe, Zambia, Tanzania, Kenya, Ethiopia, Sudan, and ends at Cairo in Egypt. It is also called the Cairo-Gaborone highway. The importance of having a well-developed transport network in a country. It promotes trade. It promotes the development of industries. It promotes the development of towns. It eases administration. It promotes tourism. It makes transportation of people and goods faster and easier. Advantages of road transport. It offers door to door services. It is the commonest type of transport. It takes people and goods to their destinations/ final places. It does not follow a fixed time table. ie.one can move any time. It cheaper for short distances. Roads are cheap and easy to construct making road transport available and affordable by many people. Disadvantages of road transport. It is affected by traffic jam. Accidents are very common on roads. It is slower than air transport. It is greatly affected by weather changes. Roads requires regular maintenance. Common causes of road transport Speeding vehicles Overloading of vehicles Driving vehicles in dangerous mechanical conditions ✞ Driving under the influence of drugs e.g., alcohol ✞ Poor roads with potholes. Impatient drivers. Ways of reducing/ controlling road accidents. By enforcing laws against over overloading of vehicles. By teaching people about road safety rules. By repairing vehicles regularly. By putting road signs along the roads.				

		By fixing speed governors in vehicles.				
20	Identifies the importance of different means of transport in EA (Cars, trains, pack animals, water vessels, Aeroplane's etc	ROAD SIGNS These are symbols that are put along the roads to guide the road users. They give information and instructions to the road users. Road users include: the cyclists, drivers, motorists, pedestrians, etc. Types of road signs Prohibitory signs Mandatory signs Informative signs Warning signs **(i)** Warning signs Warning road signs are signs that tell road users the possible hazards/ dangers ahead of them. They are always enclosed in triangle. Examples of warning road signs  double bend  humps ahead  accident ahead	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the transport sector in East Africa**	**1.describing the different road signs** **2.giving the values of different road signs.**	**roads** **road guides** **road users** **accidents** **community**

		 roundabout  electric wires. <u>Mandatory road signs</u> These signs tell you what must do. These are always enclosed in a circle.  no parking  stop  no entry  speedlimit  no pedestrian.				

		<u>Informative road signs</u> These are for guiding purpose. In most cases, these signs are enclosed in a rectangle.  **BUS STOP** bus stop  Traffic  Zebra crossing  Hospital <u>Prohibitory signs</u> They tell what you are not allowed to do.  No through road.				

		 Driving on shoulders prohibited.				
21	Analyses advantages and disadvantages of various transport systems today. (road, railway)	Water transport This is the cheapest and slowest type of transport. It is suitable for carrying/ transporting bulky and fragile goods. Modern means Ferries Steamers Motor boats Ships Traditional means Canoes Rafts Boats Stepping A Port is a place where water vessels load and offload goods. Hinterlands are parts of a country that are far away from the coast or main cities. Types of ports. inland ports Sea ports A sea port is a town with a harbour used by large water vessels. A harbour is an area of water at the coast that is protected from an open sea by a strong wall where ships can shelter/ anchor. Inland ports are located along the inland water bodies. Ie.on lakes. Examples of sea ports that handle East Africa's imports and exports. Port Mombasa in Kenya Port Dar-es-salaam in Tanzania Note: *Uganda mostly imports her overseas goods through Mombasa because port Mombasa is nearer to Uganda as compared to other sea ports.* *Imports are goods a country entering a country/a country buys from other countries while exports are goods a country sells to other countries*	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand more about water transport.**	**1.defining water transport** **2. giving different means of water transport.** **3.giving advantages ad disadvantages of water transport.**	**community** **economic activities**

		. *How does port Mombasa contribute economic development of Uganda?* *Port Mombasa handles most of the Uganda's imports and exports.* Examples of East Africa's major imports. Vehicles Electrical appliances Drugs Petroleum products Electronics Agricultural machinery Examples of major exports of East Africa. Minerals Tourism industry Fish Agricultural produce Hydroelectricity Advantages of water transport. It is not affected by traffic jams. It carries more bulky goods than other types of transport. It is very cheap. It is suitable for transporting bulky and fragile goods. Disadvantages of water transport. It is very slow. It can be affected by storms. It is not flexible. It does not take people and goods to their final places. It can be blocked by floating vegetation. Facilities at the ports are very expensive to build. Causes of water accidents. Overloading of water vessels. Water vessels in poor mechanical conditions. Presence of hard rocks that cause cracks in water vessels after hitting them. Storms that make water vessels capsize. Presence of dangerous aquatic animals.				
22	Analyses advantages and disadvantage	Air transport is the fastest and quickest type of transport. Air transport in East Africa was first controlled by the East African Airways.	**guided group discussion**	**To enable the learner, understand**	**1.giving the meaning of air transport**	**community**

	s of various transport systems today. (road, railway)	The East African Airways was formed in 1945 and it was based in 1945 and was based in Nairobi. The first airplane landed at Entebbe on Lake Victoria in 1927. The Civil Aviation Authority (CAA) is the body responsible for managing air transport services in Uganda. <u>Means of air transport</u> Aero planes Rockets Helicopters Jets Parachute <u>Places where aircraft can land and take off.</u> Airport: A large flat cleared area where aeroplanes can land and take-off. Airstrips. A narrow strip of land that aircraft can land on. e.g. Kololo airstrip. Airfield. An area of flat ground where private planes can land and take off., **e.g.,** Soroti airfield, Arau airfield, Mbarara airfield, Gulu airfield. <u>Examples of international airports in East Africa</u> Country — Airport(s) Uganda — -Entebbe airport Kenya — -Nairobi international **airport** -Jomo Kenyatta airport. -Mombasa airport -Eldoret airport Tanzania — -Dar-es-salaam international airport -Kilimanjaro international airport. -Arusha International Airport Rwanda — -Kigali international airport Burundi — -Bujumbura International Airport. <u>Advantages of air transport</u> It is the fastest type of transport It connects distant places/ different regions of the world. It is reliable since it follows a **timetable**. It is not affected by traffic jam. It is suitable for transporting perishable goods. Note:	**brain storming** **guided discovery** **guided discussion** **think pair share method.**	**more about air transport**	**2. mentioning the different mean s of air transport** **3. giving different airpotts in East Africa** **4. Giving different advantages and dis advantages of Air transport.**	**economic activities**

		Perishable goods are goods which can easily ***get*** **spoilt e.g.** *fresh fish, flowers and fruit.* *Air transport is most suitable for transportation of perishable goods because it is very fast.* <u>Disadvantages of air transport</u> It is very expensive to pay for the service It can be affected by bad weather condition eg foggy, cloudy, rainy ❖ It is risky in case of accidents where by chances of survival are minimal ❖ Airports are very expensive to construct and maintain. It does not take people and goods to their destinations.				
23	Analyses the advantages and disadvantages of various transport systems today. (road, railway)	<u>Pipeline transport</u> It is the best type of transport for transporting liquids and gases. <u>A pipeline</u> is a series of pipes used for transporting liquids and gases. Pipeline transport is the movement of goods from one place to another through pipes. Liquid goods, e.g., petrol, diesel, water, sewage, are also transported through pipelines. The first pipeline in East Africa was built by the Italians from Dar-es-salaam to the copper belt at Ndola in Zambia. The pipeline in Kenya was built by the Japanese from Mombasa to Nairobi, Kisumu, and Eldoret in 1978. Uganda is building a pipeline for transporting petroleum from the shores of Lake Albert to Tanga port for refining and then exportation. <u>Advantages of pipeline transport</u> It can reach door to door. It does not pollute the environment. It is not affected by traffic jam. It helps to reduce congestions and accidents on roads. It is quicker in transporting liquids than road and railway transport It reduces loss of petroleum products through thefts. <u>Disadvantages of pipeline transport</u> Pipes are expensive to buy and install. Pipelines are costly to repair. There is a great loss in case of a leakage. It is difficult to construct pipelines in mountainous areas.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**		**1.defining pipeline transport** **2.mentioning different pipelines in EA** **3.giving different advantages and disadvantages of pipeline transport.**	**community** **economic activities**

		Pipelines can be destroyed by miners. Pipelines transport only one type of goods e-liquids. <u>Raily transport.</u> <u>A railway</u> is a track with rails on which trains move. Railway transport is the movement of people, goods, and services by trains. <u>The Tanga-Korogwe railway line</u> was the first railway line to be built in East Africa. It was built between 1893-1902 by the German colonialists in Tanganyika. <u>Means of railway transport</u> • Trains <u>Types of trains</u> • <u>Cargo trains</u> (These are trains which carry commodities /goods) • <u>Passenger trains</u> (These are trains which carry people with some of their belongings) **Advantages of railway transport**. It is not affected by traffic jam. It is reliable since it works on a fixed time table. It is cheaper to pay for the service than air and road transport ✞ It has less accidents. Railway lines are not easily damaged by bad weather conditions . **<u>Disadvantages of railway transport</u>** Railway lines are expensive to construct It is slower than road and air transport It does not take people to their final destination. It is difficult to construct railway lines in mountainous areas				
24	Analyses advantages and disadvantages of various transport systems today. (road, railway)	<u>Major railway lines in East Africa</u> Tanga-Korogwe railway line Kenya-Uganda railway Tazara/ Tanzam railway line. The Central railway line of Tanganyikaa <u>THE TAZARA RAILWAY.</u> Tazara stands for Tanzania-Zambia Railway It is also called the <u>Tanzam railway</u>. The Tanzam railway line was constructed by the Chinese expatriates, funded by theTanzanian and the Zambian governments from 1970 to 1975.	**guided group discussion** **brain storming** **guided discovery** **guided discussion**	**To enable the learner to understand major railway lines in East Africa.**	**1. mentions the major railways in East Africa** **2.describing the major railways in East Africa.**	**community** **economic activities.**

		<u>Reasons for the construction of the Tanzam railway.</u> To transport copper ore from the Zambia copper belt to Dar-es-salaam for exportation. To link Zambia to the coastal port of Dar-es-salaam. <u>THE KENYA-UGANDA RAILWAY</u> The Kenya-Uganda railway was the second railway line to be built in East Africa It was also known as the <u>Uganda railway</u> because it was built purposely to link Uganda to the East African coast. Sir William Mackinnon brought the idea of the construction of the Uganda railway. It was constructed by the British colonialists. The construction of the Uganda railway started at Mombasa in 1896 and ended at Pakwach in 1965. The first casual unskilled employees to build the Uganda railway were the African natives. The Africans were later replaced by the Indian coolies. <u>Reasons why the Africans later refused to work on the Uganda railway construction.</u> They did not want to leave their families for a long time. They were underpaid. They feared being attacked by the fierce lions at Tsavo National Park. <u>Reasons for the construction of the Kenya-Uganda railway</u> To link Uganda to the East African Coast. To stop the slave trade. To make British administration easy To make transport easy. To encourage the white settlement in Kenya. Note: ✓ *Lord Delamere encouraged the white settlement in Kenya.* *How did the construction of the Uganda railway help to end the slave trade in East Africa?* ✓ *The trains were used to transport goods, which would be carried by the slaves to and from the East African coast.*	**think pair share method.**			

Reasons why the Kenya-Uganda railway was extended to different places

Pakwach	to transport tobacco from West Nile.
Namasagali	to transport cotton from Busoga region.
Kasese	to transport copper ore to Jinja for smelting.
Tororo	to transport limestone to the East African coast.
Port Bell	to transport goods transported through Lake Victoria

Problems faced during the construction of the Uganda railway.

Attacks from fierce lions.

Attacks from hostile people eg the Nandi, Masai.

Attacks from tropical diseases eg, malaria, sleeping sickness.

Shortage of skilled labour.

Some physical features made the construction of the railway more difficult and expensive, eg the Eastern rift valley.

NB:-*Shortage of labour was solved by bringing the Indian coolies who provided labour during the construction of the Uganda railway.*

Roles played by different personalities towards the construction of Uganda railway.

Sir William Mackinnon	He brought the idea of the construction of the Uganda railway.
Captain Mac Donald	He surveyed the land where the Uganda railway was to pass.
Sir George Whitehouse	He was the chief engineer during the construction of the Uganda railway.
Colonel Patterson	He killed the fierce lions at Tsavo **National Park**.

		<table><tr><td>Sir Guildford Molesworth</td><td>He was the last engineer to inspect the completed Uganda railway.</td></tr></table> Effects of the construction of the Kenya-Uganda railway. (a) Positive effects. Slave trade was stopped. It led to the development of towns e.g. Nairobi, Nakuru etc. Transport became easier in East Africa. Uganda was linked to the East African coast. British administration became easy in East Africa. (b) Negative effects. It led to the coming of the white settlers in the Kenya highlands It led to the development of people e.g. The Kikuyu from the Kenya highland It led to increased exploitation of East Africa's resources.				
25	✓ Defines communication Names the different traditional and modern means of communication (drums, whistles televisions etc.)	**Communication in East Africa.** **Communication is the sending and receiving of messages.** **Types of communication** **Verbal communication** **Non-verbal communication** **Types of means of communication** **Traditional means of communication** **Modern means of communication** **Examples of traditional means of communication** **Drums** **Rock paintings.** **Gestures** **Horns** **Smoke signals** **Messengers** **Whistles** **Bells** **Clapping** **Alarms** **Uses of drums** **They are used for communication.**	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner, understand more about communication ion East Africa.**	**giving the meaning of communication** **describing types of communication** **giving advantages and disadvantages of modern and traditional means of communication.**	**community** **home.** **economic activities**

		They are used for entertainment. **They represent people's culture.** Materials used to make drums. • Animal skins and hides. • wood **challenges of traditional means of communication** ❖They are slow in delivering information. They are tiresome to use e.g. blowing a trumpet. They have a small coverage. Some are limited to particular societies. **Advantages of traditional means of communication** It is cheap to get and receive information They favour both the illiterates and literates. **Modern means of communication.** This is the sending and receiving of messages using the new modern technology. **Examples of modern means of communication** Telephones				

		Bill boards Magazines Newspapers Telefax Telegram Radios E-mails **Advantages of modern means of transport**. They are quick at delivering information They are not tiresome to use They are not limited to particular society. **<u>Disadvantages of modern means of communication</u>** They are expensive to buy They are complicated to operate. Some do not favour the illiterate. Some promote immorality. **<u>Importance of communication</u>** It promotes unity among different people It promotes trade among people **<u>How communication promotes trade.</u>** It enables people advertise their goods. It enables the consumers to know the prices of goods. It enables the consumers and producers to be in touch. <u>Note</u>: ➢ *Uganda Communications Commission (UCC) is responsible for regulating the communication sector in Uganda.* ➢ *UCC gives licence to media companies, regulates mass media communication and also promotes communications infrastructure development* . **<u>Forms of modern communication</u>** There are two forms of communication namely; • Mass media communication eg.use of radios, televisions, newspapers etc. • Telecommunication eg.use of telephones, telefax, radio calls etc **<u>Mass media means of communication</u>**				

		Mass media are means of communication that send/ deliver information to many people at the same time. **Examples of mass media means of communication** Radios Newspapers Televisions Newsletters Magazines **Categories of mass media means of communication** Print media Electronic media **Print media** These are the means of sending information to people through printed materials e.g. newspapers, magazines, newsletter, notice board, billboards. **Electronic media** These are the means of communication that operate by the help of electricity e.g. radios, telephones, televisions, internet, neon signs.				
26	Newspapers, televisions, and magazines	**NEWSPAPERS.** **These are large printed sheets of paper containing news, articles, and advertisements that are published daily or weekly.** **Government-owned Newspapers in Uganda.** **The New Vision** **Etop** **Bukedde** **Orumuri** **Rupiny** **Privately owned newspapers in Uganda.** **Daily monitor** **Red pepper** **The Observer** **Advantages of newspapers.** **They provide detailed information.** **They can store for future use.** **They entertain people through cartoons and stories.**	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner to understand how newspapers are used in our daily life.**	**1.Defining newspapers.** **2.describing different newspapers used in EA** **3. giving advantages and disadvantages of using newspapers**	

		They create employment opportunities for people. **They are a source of educational information.** **They cater to the deaf and the dumb.** **<u>Disadvantages of newspapers</u>.** **They are expensive to buy daily.** **They take a long time to reach remote areas.** **Some newspapers print pornographic pictures.** **They don't cater to the blind and the illiterate.** **<u>Roles played by newspapers in the development of a country</u>.** **They create employment opportunities for people.** **They promote communication.** **They are a source of government revenue.** **They are used for advertising in trade.** TELEVISION COMMUNICATION. A television is a piece of equipment with a screen on which one watches programmes with moving pictures and sound. Television communication is audio-visual (one watches and hears at the same time). <u>Examples of television stations in Uganda</u>. Government owned: Uganda Broadcasting Corporation (UBC) TV; Star TV; Urban TV; Bukedde TV; TV West Privately owned: National Television (NTV); Top TV; Spark TV; National Broadcasting Services (NBS) TV; Salt TV; Record TV; Life TV; Dream TV; Record TV <u>Advantages of television communication</u>. It is audio-visual. Televisions broadcast educational programs. It favours the deaf and the dumb. Televisions entertain people through music and cartoons. <u>Disadvantages of television communication</u>.

		<u>Mobile telephone companies that make mobile telephones.</u> ▯ Tecno ▪ Alcatel ▯ Itel ▪ Siemens ▯ Nokia ▪ Motorola ▯ Samsung <u>Advantages of telephone communication.</u> ✞ It covers a wider area. ✞ Telephones are quick in sending and receiving messages. ✞ Telephone users get instant feedback. ✞ It is convenient when people are using mobile telephones. <u>Disadvantages of telephone communication</u>. ✞ Telephones are expensive to buy. ✞ Telephones need regular loading of airtime for communication. ✞ Telephones require regular charging of batteries. ✞ Communication is impossible where there is no communication network. <u>Importance of mobile telephones.</u> ✞ They are used for communication. ✞ They are used in money transfer. ✞ They are used to store money. ✞ They entertain people through music, games, movies etc.				
28	✓ Discuses education importance and type (formal, informal and non-formal) ✓ Compares types of education by their	POST OFFICE. ✚ This is an organisation responsible for collecting and delivering letters and parcels. ✚ <u>A post office box</u> is a lockable box with an address or number found at a post office that is used as a collection point for mails. ✚ The biggest post office in Uganda is located in Kampala. ✚ Postal services enable us to send letters, telegrams, and parcels with in a country or outside the country. <u>Government companies that carry out postal services in East Africa</u>. • Uganda: Posta Uganda. • Kenya: Posta Corporation of Kenya. • Tanzania: Tanzania Posts and Corporation. <u>Services offered by the post office</u>. • Communication service. • Transport service.	**guided group discussion** **brain storming** **guided discovery** **guided discussion**	**To enable the learner understand the value of postoffice in the sending and receiving of messages.**	**1. giving the meaning of a postoffice.** **2. describing the different postoffices in East Africa.** **3.mentioning advantages and disadvantages of using post office services.**	**community economic activities**

	character istic ✓ Discuses education importance and type (formal, informal and non-formal) ✓ Compares types of education by their characteristic	• Banking service. Private companies which deliver mails or parcels (courier companies). • Daks couriers limited. • Skynet Worldwide Express. • DHL International. Importance of a post office. ✞ It sends letters and parcels to the owners. ✞ It issues postage stamps. ✞ It provides employment opportunities. ✞ It offers banking services. Problems facing the post office. ✞ Competition from other communication sectors.e.g. using the internet. ✞ Poor transport and communication. ✞ Shortage of capital to boost the postal services Problems facing the communication network in East Africa. ✞ Shortage of funds. ✞ Limited skilled labour force. ✞ Widespread poverty among people in East Africa. ✞ Low levels of technology. ✞ Insecurity in some parts of East Africa. ✞ Poor transport network in some areas. Possible solutions to the problems facing the communication network in East Africa. ✞ By introducing a national language. ✞ By building better transport lines in East Africa. ✞ By availing mobile telephones to people at low prices. ✞ By charging low call rates for the use of airtime on telephones. ✞ By sensitising people on how to use various communication gadgets. Note: *Kenya and Tanzania use Kiswahili as their national language.* *Uganda has no national language because she has many tribes which speak different languages.* *Uganda uses English as her official language because she was colonised by the British who speak English.*	**think pair share method.**			

		Rwanda uses French as her official language because she got her independence from the Belgians who speak French. *How a national language is important.* *It eases communication among the people in the country.* *It promotes trade among people.* *It promotes national unity.*				
29	✓	<u>A Resource</u> is any component of the environment that can satisfy man's needs Resources are classified into natural and man-made resources. <u>Examples of resources.</u> Land People Computers Wind/ air Cars Telephones. Water Sunshine Buildings Minerals Animals <u>Natural resources</u> are things in the environment tha on their own and can be used to satisfy man's ne <u>Types of natural resources.</u> Renewable resources Non-renewable resources. <u>Renewable resources</u> are things which are used to satisfy man's needs that can not get exhausted when used. These resources cannot get used up when used. Renewable resources can be replaced naturally when used.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner identify the different r esources in Africa**	**1. giving the meaning of a resource** **2.mentioning the different**	**community** **states** **economic activities.**

		Renewable resources are also referred to as inexhaustible resources. Examples of renewable resources. Land Water Wind People Sunshine Animals Non-renewable resources are things which are used to satisfy man's needs that can get exhausted when used. These resources can get used up when people use them. Non-renewable resources cannot be replaced naturally after use. Non-renewable resources are also referred to as exhaustible resources. Examples of non-renewable resources. Fossil fuels Minerals eg.petroleum, sand, gold etc. **Note: -***Man made resources* ***are things made by man and are used to satisfy man's needs.eg cars, aeroplanes, telephones, computers, trains etc.*** **ECONOMIC DEVELOPMENTS IN AFRICA.** **TOPIC 9: INTRODUCTION TO RESOURCES.** A resource is any component of the environment that can be used to satisfy man's needs. Natural resources are components of the environment that exist on their own and can be used to satisfy man's needs. Natural resources are classified into renewable and non-renewable resources. Renewable resources are things in the environment used to satisfy man's needs that				

		cannot get exhausted when used. e.g. wind / air, sunshine, water, soil. Renewable resources are also called inexhaustible resources. Non-renewable resources are components of the environment used to satisfy man's needs that can get exhausted when used. e.g. minerals, fossil fuels etc. Non-renewable resources are also called exhaustible resources. Economic resources are resources which African countries depend on to earn revenue. **Economic resources in Africa include;** •Land / soil • Water • Vegetation. •Climate • Minerals • Climate •Animals • People **Note.** -Land is considered to be the most important resource because most of man's activities are carried out on land. Importance of various natural resources to Africa's development. Land It is used to grow crops, build on it factories, grazing animals, construct roads and railway lines, making bricks, source of income when sold. **Animals** Some are a source of meat, milk Some provide raw materials to industries eg.hides, skins, hooves etc. Some animals are a source of income when sold. Some animals are used as means of transport. Human resource/ people/ labour They provide services to other people. They help in management of other resources. People provide market for goods and services. They pay taxes to the government.				

		Note: -Unskilled labour are people without training to do something. -Semi-skilled labour are people who have some training to do something. -Skilled labour are people who are trained to do something. **Plants** They are a source of herb al medicine. Vegetation helps in formation of rain which supports crop growing. Plants are habitats for wild animals Some plants attract tourists who bring in income. Trees provide timber, wood fuel etc. **Minerals** They are a source of income when sold. They are used as raw materials in industries. Mineral exports earn foreign exchange. They are a source of employment to people. **Sunshine** It helps in formation of rain which supports crop cultivation. It helps in generation of solar electricity. It provides light to people. It helps plants to make their own food. **Waterbodies** They are fishing grounds. They are used as a medium of water transport. They help in rain formation which promotes crop growing. Rivers help in generation of hydro electricity. Waterbodies attract tourists who bring in income. **Wind** It helps in pollination of flowers. It is used in winnowing. It is used to generate power used in wind mills. Factors hindering effective resource utilisation in Africa. ❖ Shortage of skilled labour force. ❖ Low level of technology. ❖ Political instability in some parts of Africa.				

		❖ Limited capital invested in resource utilisation.				
30	Identifies major economic developments in Africa ✓ industrial growth and industrialization.) ✓ Explains factors considered before setting up an industry ✓ Explains factors for industrialization ✓ Explains the types of industries (primary, secondary, tertiary assemblin	**ECONOMIC DEVELOPMENTS IN AFRICA.** Economic development refers to the gradual growth in the economy of an area. Economy is the relationship between production, trade and supply of money in a particular area. Indicators of Economic development in Africa. Development of regional bodies. Improved social services. High life expectancy. Industrial development. **Major Economic developments in Africa.** High levels of technology. Improved transport and communication. High levels of employment. Infrastructural development. Industrialisation. Development of agriculture. Development of hydroelectric power dams. Formation of regional bodies. Development of the mining industry. Development of modern roads, airports and railway lines. Development of the tourism industry. Factors that have promoted economic development in Africa. Formation of regional bodies. Improved transport and communication network. Presence of natural resources. Foreign aid. **Key sectors in the economy of Africa.** Increased levels of literacy. Availability of skilled and unskilled labour force. Peace and security in most parts of Africa. Agriculture. Tourism Trade Mining	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner identify different economic developments in Africa**	**1. defining the term economic development** **2.identifying and describing different economic developments in Africa.**	**economic activities**

	g and traditional industries. ✓ Gives importance and dangers of industries	Energy production. Industrial development. Fishing. Lumbering. **INDUSTRIAL DEVELOPMENT IN AFRICA.** An industry is a combination of firms producing related products. Industrialisation is the development of industries in an area on a large scale. **Types of industries**. **Primary industry.** It is an industry that deals with the production raw materials Farming industry • Lumbering industry. Fishing industry Mining industry **Secondary industry** I t is an industry that processes raw materials into manufactured goods. All Processing/ manufacturing industries e.g. meat processing industry, fish processing industry. **Tertiary industry** It is an industry that deals with the provision of social services. Transport industry Banking industry Communication industry Tourism industry **Factors to consider before setting up an industry in an area.** •Availability of land. • Availability of labour force. •Availability of capital. • Government policy. •Presence of raw materials. • Transport and communication network. •Availability of a water source. • Peace and stability. •Market for goods. • Energy source. **Importance of each of the above factors.**				

		Capital is used for buying raw materials, meeting transport costs and paying for labour. **Raw materials** are used in manufacturing goods. **Market** is used for selling off the processed goods. **Transport** makes movement of raw materials and processed goods faster and less expensive. **Energy** is used to run/ operate machines in industries. **Water** is used for cooling machines in industries. **Communication** helps buyers and sellers to get in touch. Labour is used in the management of industrial processes like in operating machines in industries. Land is used for establishment of structures and expansion of an industry. **Benefits of people to a nearby industry** ❖ People provide raw materials to industries. ❖ They provide labour force in industries. ❖ They provide market for industrial goods. Benefits of establishing an industry in an area. ❖ It creates job opportunities to people. ❖ It is a source of government revenue through taxing an industry. ❖ It creates market for goods produced in the community. ❖ It promotes the development of infrastructure like roads. ❖ It promotes the development of towns. **Note:** -Agro-based industries are industries which use agricultural produce as their raw materials. -Textile industries are industries which use cotton as their raw material. Dangers of setting up industries in an area. ❖ It leads to pollution of the environment. ❖ It promotes deforestation. ❖ It leads to displacement of wild animals. **Factors that have promoted Industrial development in Africa.**				

		❖ Presence of raw materials. ❖ Presence of cheap labour force. ❖ Improved peace and security. ❖ Availability of large market for industrial goods. ❖Availability of capital. ❖Presence of energy sources. ❖ Favourable government policies. **Contributions of Industries to Africa's development.** ❖ Industries provide job opportunities to people. ❖ They promote the development of towns. ❖ Exported industrial goods earn foreign exchange. ❖ Industries encourage agricultural production. ❖ They provide goods to people at cheap prices. **Problems affecting Industrial production in Africa.** ❖Limited energy supply. ❖ Limited market for industrial goods. ❖Shortage of funds. ❖ Political instability in some parts of Africa. ❖ Limited supply of raw materials. ❖ Smuggling which reduces market for locally manufactured goods. ❖ Shortage of skilled labour force. Note: -Excise duty tax is the tax paid on locally manufactured goods while Customs duty tax is the tax paid on imports.				
31	Rivers in (East Africa and Africa) and **Multipurpos**	**ENERGY RESOURCES IN AFRICA.** Energy resources refers to things that can be exploited to generate energy. **Examples of energy resources.** •Animal wastes.	**guided group discussion** **brain storming**	**To enable the learner, understand the different energy**	**1.defining energy resources** **2. mentioning the different**	**community** **economic activities**

	e River projects in Africa ✓ Lakes, seas and oceans in Africa) Discusses the importance of lakes, rivers and oceans to the people of EA. (Economic activities carried out on lakes and rivers)	• Uranium • Sunshine. •Natural gas • Hot springs • Wind •Crude oil • Fast flowing water **Types of energy** ❖Solar energy generated from sunshine. ❖ Bio gas from animal wastes. ❖Geothermal energy generated from hot ❖ Nuclear energy from uranium. springs. ❖ Thermal energy from crude oil. ❖Hydro electricity from fast flowing water. ❖ Wind energy from wind. **HYDRO ELECTRIC POWER DAMS IN AFRICA.** Hydro electricity is the type of energy which is generated by the power of flowing water. Hydro electricity is generated from rivers with waterfalls. A dam is a wall built across a river to control the flow of water and form a reservoir. Hydro electricity is the commonest used energy in Africa. Advantages of Hydroelectricity. ❖ It does not pollute the environment. ❖ It can be used by many people for different purposes at the same time. **Disadvantages of Hydroelectricity.** ❖ Power dams are very expensive to build. ❖ Creation of reservoirs leads to displacement of people. ❖ It is very expensive to pay for electricity bills. ❖ Creation of dams limits water supply by the same river from one area to another. ❖ Reservoirs cause flooding which destroys the natural environment. **MULTIPURPOSE RIVER PROJECTS IN AFRICA.** A Multipurpose river project is a project set up on a river to serve several purposes.	**guided discovery** **guided discussion** **think pair share method.**	**resources in Africa.**	**examples of energy resources.** **3.mentioning the different types of energy.**	**waterbodies.**

		It involves the development of a dam on a large river extended over a large geographical area. This project serves many purposes at a single time such as acting as a hydroelectric power plant, provision of clean water, providing water for irrigation and checking the flow of river water hence the name multipurpose river projects. **Examples of Multipurpose river projects in Africa.** **River Nile** Nalubaale power dam Bujagali dam Kiira dam, Uganda • Aswan High dam, Egypt Sennar dam Roseires dam Jebel Aulia dam Sudan **River Niger** • Kainji dam, Nigeria. **River Volta** • Akosombo dam, Ghana **River Tana** • Seven forks dam (Masinga, Kamburu, Kindaruma, Gitaru and Kiambere dam), Kenya **River Congo** Inga dam Nzilo dam, DRC **River Zambezi** • Kariba dam, Zambia • Cahora Bassa, Mozambique. **River Rufiji** Mtera dam Kidatu dam, Tanzania **River Pangani** •Nyumba ya Mungu dam,Tanzania **Major reservoirs in Africa.** ❖ To control floods ❖They provide water for irrigation. ❖ They help in generation of hydro electricity.				

		❖ They act as fishing grounds. ❖ They are used for recreation and tourism. **Factors that favour the development of hydroelectric power dams.** ❖ Presence of constant flow of water. ❖ Presence of narrow deep valleys. ❖ Presence of water falls. ❖ Presence of strong rocks that give a strong foundation. ❖ Presence of reliable market for hydroelectric power. **Problems affecting Hydroelectric power generation in Africa.** ❖ Low levels of technology. ❖ Limited skilled labour force. ❖ Shortage of capital. ❖ Changes in the volume of water in some rivers. ❖ Low consumption of hydroelectric power. **Advantages of Multipurpose river projects.** ❖They create employment to people. ❖ They generate revenue to the government through exporting Hydroelectricity. ❖ They help in controlling floods. ❖They improve navigation on rivers. ❖ They provide water for irrigation . ❖ They increase power generation. **Importance of Energy in the development of Africa.** ❖ It is used to operate machines in industries. ❖ It is used in pumping clean water for domestic use. ❖ It is used to operate communication facilities. ❖ It is used for lighting homes, industries and streets. ❖ It promotes mechanisation of farming activities. **Rural electrification.**				

		This is the extension/ supply of electricity to rural areas. **Benefits of Rural electrification.** ❖ It promotes the development of rural areas. ❖ It saves human time and labour in rural areas. ❖ It reduces the need for wood fuel hence conserving the natural environment. Qn: How does rural electrification promote conservation of the natural environment? **Challenges hindering** ❖Shortage of funds. ❖ Corruption. ❖Poor transport network. ❖ Ignorance among the people				
32	Vegetation (forests and crops)	**AGRICULTURAL DEVELOPMENT IN AFRICA** Agriculture is the growing of crops and rearing of animals. It is also called farming. Agriculture is the back bone of Africa's economy because it employs the biggest population in Africa hence the major source of income for African countries. Most people in Africa carry out small scale farming (subsistence farming) because it is very cheap to practice. They grow non-traditional cash crops like beans, maize, ground nuts, rice, potatoes etc. Large scale / commercial farming (plantation farming) is not commonly practiced in Africa because it is very expensive to be practiced. Crops grown under this system include; coffee, cotton, tea, sisal, oil palm, cocoa. **Factors that have promoted Agricultural development in Africa.** ❖ Presence of fertile soils. ❖ Presence of reliable rainfall. ❖ Availability of ready market for agricultural produce.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner, understand the agricultural sector in Africa**	**1.defining the term agriculture** **2.mentioning factors that have promoted the agricultural sector.** **3.describing the irrigation system in Africa.**	**community economic activities.**

		❖ Improved transport and communication network. ❖ Political stability in most parts of Africa. ❖ Availability of ready market for agricultural produce. ❖ Presence of high labour force. **IRRIGATION FARMING IN AFRICA.** Irrigation is the artificial supply of water on land to support plant growth. Irrigation farming is the system of crop growing in which land is supplied with water by human means to support plant growth. Irrigation scheme is an area of land which is supplied with water by human means to support crop growth. Irrigation schemes are mostly set up in areas that do not receive reliable rainfall (dry areas). These areas much be having reliable permanent sources of water. **Notable Irrigation schemes in Africa.** • Gezira irrigation scheme for cotton. • Managil irrigation scheme for cotton. • Kenana irrigation scheme for sugar canes. • Mwea Tebere irrigation scheme for rice. • Kilombero valley irrigation scheme for sugar canes. • Doho irrigation scheme for rice • Ongom irrigation scheme in lira for citrus fruits. • Olweny swamp irrigation scheme in Lira for rice • Nsimbe and Rosebud irrigation schemes for flowers. **Common methods of Irrigation.** • Gravity flow method • Overhead sprinkler method **Advantages of Irrigation farming.** ❖ Crops are grown at any time of the year. ❖ It promotes food security in the country. ❖ Irrigation farming helps to put idle desert land into use.				

		❖ Crops grow well without being affected by sunshine. **Disadvantages of Irrigation farming.** ❖ It is very expensive to practice. ❖ It is not possible where there is no reliable source of water. ❖ It leads to soil leaching. **Contributions of Agriculture to Africa's development** ❖ It provides a steady source of food to people. ❖ It is a source of raw materials for agro-based industries. ❖ Agricultural exports earn African countries foreign exchange. ❖ It has promoted the development of infrastructure like roads, railways. ❖ It is a source of employment to people. **Problems facing Agriculture in Africa.** ❖ Shortage of funds. ❖ Prolonged drought. ❖ Presence of pests and diseases. ❖ Limited local market for agricultural produce. ❖ Poor transport network. ❖ Political instability in some parts of Africa. ❖ Competition from other sectors e.g. mining, tourism, fishing. ❖ Fluctuation of prices for agricultural produce. ❖ Rural-urban migration which reduces labour force on farms in rural areas. **Possible solutions to the problems affecting agricultural development in Africa.** ❖ By providing small scale loans to farmers. ❖ By building better roads in different parts of Africa. ❖ By encouraging the use of irrigation farming. ❖ By promoting peace and security in all parts of Africa.				

		❖ By encouraging the use of pesticides and insecticides.				
33	discusses the importance of mineral (each mineral with importance with a mining area where its mined, Factors that have promoted the development pf mining industry, contribution of mining industry to the development of EA) discusses the importance of mineral (each mineral with importance with a mining area where its mined, Factors that have promoted	**MINING INDUSTRY IN AFRICA.** Mining is the extraction of minerals from where they exist. Minerals are valuable substances which exist naturally that are found on or below the earth's surface. A mineral deposit is a place where a particular mineral exists naturally in large amount. **Types of minerals.** • Metallic minerals e.g. copper, iron ore, lead, zinc. • Non-metallic minerals e.g. Limestone, phosphates, diamonds. • Fuel minerals e.g. Coal, crude oil, uranium. **Countries in Africa with the biggest quantities of minerals.** • South Africa. • Angola •Democratic Republic of Congo • Botswana. **Types of mining.** ▪ Traditional mining ▪ Modern mining. **Methods of mining** • Open cast mining e.g. salt, soda ash, limestone, gold. • Underground mining e.g. copper, cobalt • Drilling method e.g. crude oil **Importance of some particular minerals.** **Soda ash** ❖ For making glasses • Lake Magadi **Copper** ❖ For making electric wires and copper coins. Kilembe in Kasese Zambia copper belt Katanga province in DRC. **Diamonds**	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable th e learner understand the mining sector in Africa**	**1.defining mining** **2. identifying the types of minerals** **3.identifying the different countries with different minerals.**	**economic activities.** **states**

	the development pf mining industry, contribution of mining industry to the development of EA)	❖ For making jewellery, drilling machines and equipment used for cutting glasses. Mwadui in Shinyanga Kimberley in South Africa **Gold** ❖ For making ornaments, jewellery, trophies, medals. Witwatersrand in South Africa. In Karamoja. **Limestone.** ❖ For making cement Hima in Kasese Osukuru hills in Tororo **Salt** ❖ For preserving food and human consumption/ for adding flavour to food. Lake Katwe Lake Magadi **Petroleum/ Crude oil** ❖ For making fuels e.g. petrol, diesel, oil, paraffin. Shores of lake Albert (Albertine region) Niger delta in Nigeria **Phosphates** ❖ For making artificial fertilizers. In Tororo **Factors that have promoted the development of the Mining industry in Africa.** ❖ Presence on many mineral deposits in different parts of Africa. ❖ Political stability in most parts of Africa. ❖ Availability of capital. ❖ Availability of both skilled and unskilled labour force. ❖ Availability of large market for minerals. ❖ Availability of reliable sources of energy. ❖ Improved transport and communication network in most parts of Africa. ❖ High levels of technology. **Contributions of the Mining industry to Africa's development.**				

		❖ It is a source of foreign exchange to the government. ❖ It is a source of employment opportunities to people. ❖ It has promoted the development of roads and railway lines. ❖ It leads to urbanisation. ❖ It is a source of raw materials for industries. **Problems facing Africa's Mining industry.** ❖ Shortage of capital. ❖ Competition from other sectors e.g. agriculture, fishing etc ❖ Low levels of technology. ❖ Shortage of skilled labour force. ❖ Poor transport network in different parts of Africa. ❖ Unreliable power supply. ❖ Mineral exhaustion in some areas. **Possible solutions to the problems facing the Mining industry in Africa.** ❖ By constructing better roads to the mining sites. ❖ By training more miners. ❖ The government should invest more money in the mining industry. ❖ By borrowing money from international institutions to invest in the mining industry. ❖ By giving tax benefits to foreign investors who invest in the mining industry. **Dangers caused by mining.** ❖It leads to pollution of the environment. ❖ It leads to land degradation. ❖It leads to displacement of people and ❖ It promotes soil erosion. animals. ❖ It promotes devegetation.				
	✓ Identifies and locates minerals					

	on the map of EA Discusses problem faced in the mining of minerals in EA and suggests solution					
34	✓ Describes tourism in Africa	**TOURISM INDUSTRY IN AFRICA.** •Tourism is the movement of people to places of interest for pleasure, enjoyment or study purpose. •A tourist is a person who travels to places of interest for pleasure, enjoyment and study purposes. Tourism is called an industry because; •It generates income. • It creates job opportunities to people. •Tourism is called an invisible trade because it generates income without exchanging physical goods. •Tourism is called an invisible export because it generates foreign exchange without exporting physical goods. **Types of tourists.** •Local tourists • International tourists/ foreign tourists. •Local tourists move from one part of the country to another for tourism while international tourists move from one country to another for tourism. **Tourist attractions in Africa.** •Wildlife • Physical features • Climate • Historical sites • Beautiful beaches • Culture	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand more about the tourism sector in Africa.**	**1.defining tourism** **2.givingFactors that have promoted the development of the Tourism in Africa.** **.3.givingPossible solutions to the problems facing Africa's Tourism industry.**	**states** **economic activities.**

		Factors that have promoted the development of the Tourism in Africa. ❖ Presence of various tourist attractions in most parts of Africa. ❖ Improved transport and communication network. ❖ Political stability in most parts of Africa. ❖ Availability of better accommodation facilities in Africa. **Contributions of the Tourism industry to the development of Africa.** ❖ It creates job opportunities to people. ❖ It promotes the development of infrastructure like roads, lodges, hotels. ❖ It promotes international relationship. ❖ It creates market for locally manufactured goods. ❖ It is a source of revenue to the government. ❖ It promotes conservation of wildlife. **Problems facing the Tourism industry in Africa.** ❖ Political instability in some parts of Africa. ❖ Poor transport and communication network. ❖ Poor accommodation facilities ❖ Shortage of funds to promote the industry. ❖ Limited tourist attractions in some parts of Africa. ❖ Limited advertisement of tourist attractions on international media. **Possible solutions to the problems facing Africa's Tourism industry.** ❖ By improving on security in Africa. ❖ By enforcing laws against poaching. ❖ By constructing better roads in all parts of Africa. ❖ By advertising Africa's tourist attractions on international media. ❖ By importing new species of wildlife in Africa. ❖ By training more game wardens.				

		❖ By building better accommodation facilities in Africa. ❖ By gazetting more wildlife conservation areas. **Dangers of Tourism.** ❖ Some tourists come as spies. ❖ Tourism can bring about spread of diseases in the country. ❖ Tourism can bring about a change of culture. ❖ Some tourists teach people anti-social behaviours.				
35	✓ Names the type of Fish (Largest fish, commonest fish, smallest, commonly caught in swamps, methods of preserving fish) ✓ Describes both traditional and modern methods of fishing (use of spears, bow and arrow,	**THE FISHING INDUSTRY IN AFRICA.** Fishing is the extraction of fish from water bodies. Fishing in Africa is carried out in rivers, lakes, oceans and seas. Lake Victoria is the largest inland fishing ground in Africa. Nile perch is the largest fish species caught in Africa while Tilapia is the commonest type caught. Fish caught in Africa is sold locally to the consumers while some is exported to Europe and other continents. **Traditional fishing methods used in Africa include;** Use of baskets, hooks, spears and using bows and arrows. **Modern methods of fishing** gill net method, trawling, line fishing method and drifting,Line fishing method Fish is preserved locally by smoking it, sun drying it and salting it. Refrigeration and tinning/canning are the commonly used modern methods of fish preservation in Africa. **Factors that have promoted the development of the Fishing industry in Africa.** ❖ Availability of large fishing grounds.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**to enable the learner understand more sbaout fishing in Africa**	**giving the Contributions of the Fishing industry to Africa's development.**	

	gillnet and trawling method, drifting ✓ Explains importance of fishing to people of EA (factors that have promoted fishing industry, contribution of fishing industry ✓ Discuses problem and suggests solutions related to fishing in EA (water hyacinth)	❖ Availability of skilled and unskilled labour force. ❖ Availability of capital invested in the fishing industry. ❖ Availability of both local and international market. ❖ High levels of technology which has favoured the use of modern fishing methods eg.trawling method. **Contributions of the Fishing industry to Africa's development.** ❖ It is a source of employment opportunities to people. ❖ Exported fish earns foreign exchange to the government. ❖ It is a source of food to people. ❖ Fish is used as a raw material in fish processing industries. ❖ Fish is a source of income when sold. ❖ Fish is used for making drugs e.g. Cod liver oil. ❖ It promotes the development of ports and landing sites. **Problems facing the Fishing industry in Africa.** ❖ Indiscriminate fishing (catching of young fish) which leads to extinction of fish species. ❖ Water pollution which kills fish. ❖ Presence of water hyacinth. ❖ Limited capital. ❖ Presence of fish predators. ❖ Fluctuation of fish prices. ❖ Cultural beliefs which discourage some people from eating fish. ❖ Limited local market for fish due to high levels of poverty among the population. **Dangers of water hyacinth.** It suffocates fish. It hinders water transport. It blocks fishing grounds. Ways of controlling water hyacinth. It breaks fishing nets.				

		It harbours some disease vectors. By spraying it with chemicals. By using machines to remove it. By using manual methods to remove it. By introducing beetles to feed on it. **Possible solutions to the problems facing the Fishing industry.** ❖ By protecting fishing grounds from pollution. ❖ By encouraging foreign investors in Africa. ❖ By enforcing laws against indiscriminate fishing. ❖ By teaching fishermen the dangers of poor fishing methods. ❖ By encouraging people to practice fish farming. ❖ The government should provide fishermen with loans to invest in the fishing industry.				
36	✓ Identifies major economic developments in Africa Nigeria	**MAJOR ECONOMIC DEVELOPMENTS IN AFRICA (CASE STUDIES)** **1. NIGERIA** **The location of Nigeria** **OIL MINING IN NIGERIA.** Nigeria is the leading producer of petroleum in Africa. Nigeria is largely dependent on oil drilling. The search for oil in Nigeria began in 1937 but the actual mining started in 1956 after the discovery of large quantities of oil in the mangrove swamps of the Niger delta. Crude oil cannot be used in raw form. It is refined in order to enable the manufacturing of oil products like petrol, diesel, kerosene, aviation fuel and others. By-products obtained from crude oil include; fertilizers, insecticides, drugs. etc Crude oil refining takes place at an oil refinery using machine heaters and separators called fractionating columns. This process is called fractional distillation.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learners understand the major economic development in Africa**	**1. describing oil mining in Nigeria**	**economic activities** **employments**

		Nigeria's oil is refined at Port Harcourt, Warri and Kaduna. Oil is transported by pipelines to ports and exported using large water vessels called oil tankers. Nigeria's oil is not the leading oil exporter in Africa because; ❖ Nigeria's oil has a lot of impurities (sulphur) which makes it pollute the environment so much when burnt. ❖ Nigeria is far away from Europe which makes it costly to transport her oil to the European buyers. **Note:** ➢ In Uganda, oil was discovered around Lake Albert by the Heritage Company of Canada. ➢ Many oil wells were discovered in an entire passage from Arua in West Nile to Kanungu. Such oil wells include;Ngasa, Waraga, Mputa, Kingfisher, Karuka, Ngege etc. ➢ Oil drilling and refining will be done by Multinational companies such as Tullow Oil Company, China National offshore Oil Company and Total. **Contributions of Oil mining to Nigeria's development.** ❖ It is a source of foreign exchange to the government. ❖ It has promoted the development of industries. ❖ It has created job opportunities to the people in Nigeria. ❖ It has promoted the development of roads. ❖ It is a source of cheap fuel to the people of Nigeria. **Problems facing oil mining in Nigeria.** ❖ Fluctuation of oil prices. ❖ Competition from other oil producing countries. ❖ Insecurity in some parts of the country.				

		Problems caused by oil mining in Nigeria. ❖ Pollution of the environment. ❖ It has led to rural-urban migration which reduces labour force in rural areas. ❖ It has led to shortage of labour in other sectors. **AGRICULTURE IN NIGERIA.** Agriculture is one of the major economic activities carried out in Nigeria. It includes crop cultivation and animal rearing. Oil palm is the chief cash crop grown in Nigeria. Oil palm growing requires heavy rainfall and high temperatures. Oil palm is used by the people of Nigeria to get palm oil from which palm wine, margarine, soap, candles and cooking oil are made. Its branch materials are used as fuel and for thatching houses. Other cash crops grown in Nigeria include; cocoa, coffee, rubber and cotton. Food crops grown in Nigeria include; bananas, maize, cassava, yams, millet, sorghum and ground nuts. **Note:** ➢ In comparison to Uganda, oil palm growing is largely done in Kalangala by Bidco Oil Company. ➢ Harvested oil palm nuts are transported to Jinja for processing and Bidco cooking oil, Bidco washing soap and other products are obtained. **Factors that have favoured Oil palm growing in Nigeria.** ❖Presence of heavy rainfall received in the country. ❖ Presence of high temperatures experienced in the country ❖ Availability of well drained fertile soils. **Contributions of Oil palm growing to the development of Nigeria.** ❖ Oil palm exports earn the country foreign exchange.				

		❖ It is a source of raw materials for agro-based industries. ❖ It has promoted the development of infrastructure like roads, railways. ❖ It is a source of employment to people. **PASTORALISM IN NIGERIA.** **Pastoralism in Nigeria is carried out by the Fulani people.** The Fulani live in the Northern part of Nigeria which experiences Semi-desert climate. They mainly rear cattle and sheep. They use horses as main means of transport for surveying grazing areas. They exchange their cattle for cereals, root crops and vegetables. During the dry season, they move southwards in search for pasture and water for their animals. After the dry season, they move back northwards. This practice is called Transhumance. **Note:** ➢ Nomadic pastoralism is the system of animal rearing where farmers moves with their animals from one place to another in search for pasture and water. ➢ Transhumance is the system of animal rearing where people move with their animals from one place to another due to changes in seasons. **Reasons why the Fulani practice nomadism.** ❖ To search for pasture for animals. ❖ To search for water for animals. ❖ To search for tsetse fly-free grazing areas. **Importance of livestock to the Fulani.** ❖ It is a source of income when sold. ❖ It is a source of food. ❖ It is used to settle disputes in form of fines. ❖ It is used for paying bride price. ❖ It is a source of skins and hides used for making foot wear and shelter. **Problems facing the Fulani.**				

		❖ Outbreak of animal diseases ❖ Prolonged drought which leads to shortage of pasture for animals ❖ Limited grazing land. ❖ Shortage of water for animals. **Note:** ➢ The Fulani of Nigeria practice transhumance while the Karimojongs of Uganda and the Turkana of Kenya practice nomadic pastoralism. ➢ The government of Uganda has built valley dams in Karamoja subregion to provide water to animals and starting irrigation projects ➢ Pastoral tribes can be resettled- by building valley dams in areas where they stay. ➢ The governments of East African countries have disarmed the pastoral tribes in order to control cattle rustling amongst them. **Contributions of livestock farming to the economic development of Nigeria.** ❖ It is a source of employment opportunities to people. ❖ It is a source of raw materials to industries. ❖ Exported animal products earn foreign exchange to Nigeria. ❖ It is a source of food to the Nigerians. ❖ It is a source of government revenue through taxing livestock farmers.				
37	✓ South Africa	**THE REPUBLIC OF SOUTH AFRICA** . **The location of South Africa.** **MINING INDUSTRY IN SOUTH AFRICA.** Mining has been the main driving force behind the development of South Africa's economy. Large scale mining in South Africa started with the discovery of Diamond by the Boers at Kimberley in Orange Free State in 1867. The Diamond mines are on the banks of river Orange. Gold was later discovered at Witwatersrand in 1886.	**guided group discussion** **brain storming** **guided discovery** **guided discussion**	**To enable understand the mining industry in Africa.**	**describing Gold mining in South Africa**. **giving Results of the Witwatersrand gold rush.**	

		South Africa is the world's largest producer of iron, lead, chromium, manganese, platinum, vanadium, limestone, phosphates, copper, tin, uranium etc. NB: -Coal is used for power production while Chromium is the metal added to Iron to make stainless steel, from which stainless steel forks, knives, spoons are made. **Factors that have contributed to the development of the mining industry in South Africa.** ❖ The discovery of various minerals in South Africa. ❖ Improved transport and communication network. ❖ Availability of both skilled and unskilled labour force. ❖ Presence of many foreign investors in South Africa. ❖ High levels of technology. **Gold mining in South Africa**. South Africa is the leading producer of Gold in Africa. Witwatersrand / the Rand is the chief gold mining area in South Africa. Gold was first discovered in South Africa in 1886 in Witwatersrand in Transvaal by an Austrian Gold miner called George Harrison. The Witwatersrand gold rush. This is the period of quick movement of miners into the Rand in search for gold. The discovery of gold in the Rand by George Harrison in 1886 was the major cause of the Witwatersrand gold rush. Uitlanders were the foreign migrant workers during the initial exploitation of gold in Transvaal. Rand lords were the rich businessmen who controlled the diamond and gold mining in South Africa before World War II. **Results of the Witwatersrand gold rush.** ❖ It led to development of towns in South Africa.	**think pair share method.**			

		❖ It attracted many foreign investors into South Africa. ❖ It led to outbreak of the second Boer war. ❖ It led to migration of Uitlanders into South Africa. ❖ It created a super wealthy class of people called rand lords. **Diamond mining in South Africa.** Diamond in South Africa was discovered on the banks of river Orange in 1867 by a white man called Erasmus Jacobs. Kimberley is the chief diamond mining area in South Africa. **Other countries which produce diamond in Africa.** • Tanzania at Mwadui in Shinyanga. • Botswana. • Democratic Republic of Congo. **Contributions of the Mining industry to the economic development of South Africa.** ❖ Minerals are used as raw materials in industries. ❖ It has created employment opportunities to people of South Africa. ❖ It has promoted the development of infrastructure like roads. ❖ It has promoted the development of towns. ❖ Mineral exports earn South Africa foreign exchange. ❖ It has attracted many foreign investors in South Africa. **AGRICULTURE IN SOUTH AFRICA.** Agriculture is the growing of crops and rearing of animals. The major farming activities in South Africa include; crop farming, ranching, dairy farming, sheep and goat rearing. **Major crops grown in South Africa.** • Maize • wheat • Sorghum				

		Other cash crops grown include • Cotton • Tea • Tobacco • Flowers **Crop growing areas in South Africa.** **Crop grown Area** Maize -Orange Free State and Kwazulu-Natal Sorghum -Mpumalanga, -Orange Free State -Gauteng -Limpopo Wheat -Western Cape Fruits -Kwazulu-Natal Tobacco -Mpumalanga and Limpopo Tea -Western Cape Sugarcane -Natal province **Contributions of crop farming to the economic development of South Africa.** ❖ It has created job opportunities to people. ❖ It has promoted the development or roads and railway lines in the country. ❖ It is a source of raw materials for industries. ❖ Crop exports earn South Africa foreign exchange. **Livestock farming in South Africa.** Livestock farming is the largest agricultural sector in South Africa. **Ranching in South Africa.** Ranching is the rearing of cattle for beef production. Cattle on ranches are provided with highly with veterinary services. The bulls are castrated in order to fatten them faster, and are usually sold off as soon as they are fattened. Castrated bulls are called bullocks. Weak cows that cannot produce good quality calves are slaughtered or sold. Dairy farming in South Africa. Dairy farming is the rearing of cattle mainly for milk production. South Africa is the largest producer of milk and beef in Africa.				

		Dairy farming is mainly done in Transvaal and Orange Free State. **Factors that have promoted Dairy farming in South Africa**. ❖ Presence of plenty of pasture for animals. ❖ Presence of cool climate which favours dairy farming. **Sheep and goat rearing**. Sheep and goat rearing ion South Africa is basically done for commercial purposes. Merino sheep is the breed of sheep that is mainly reared in South Africa while Angora is the breed of goats that is mainly reared. Merino sheep is mainly reared because it produces a high amount of wool. Wool exports earn a lot of income to the government of South Africa. It was introduced to South Africa in 1800s from Spain. NB: -The major economic activity carried out in Temperate grasslands of South Africa (the Veld) is sheep rearing. **TOURISM IN SOUTH AFRICA.** South Africa is a popular tourist destination. **Tourist attraction in South Africa include;** •National parks • Sport activities • Climate • World heritage sites. •Cultural and Historical sites. NB: -Kruger national park is the largest national park in South Africa. **Factors that have led to the development of the Tourism industry in South Africa.** ❖ Improved peace and security in South Africa. ❖ Availability of various tourist attractions. ❖ Improved transport and communication network. ❖ Availability of good accommodation facilities in South Africa. **Contributions of the Tourism industry to the development of South Africa.**				

		❖ It has created job opportunities to the natives. ❖ It has promoted the development of roads and railways. ❖ It is a source of foreign exchange to South Africa. ❖ Revenue earned from tourism is used to develop other sectors. **INDUSTRIALISATION IN SOUTH AFRICA.** Most industries in South Africa are found in the Rand / Witwatersrand. Johannesburg is the major industrial centre in South Africa. **Other Industrial towns in South Africa include;** •Durban • Cape Town • Bloemfontein •Port Elizabeth • Johannesburg • East London. **South Africa's major industries.** Bloemfontein -textile -chemicals -food processing -heavy engineering. Johannesburg -cement making -chemicals -electricals -farm machines -vehicle assembly -food processing -jewellery making Port Elizabeth -motor vehicle assembly -fertilizers making -foot wear -food processing Durban -textiles -pharmaceuticals -food processing -chemical industries. **Factors that have promoted Industrial development in South Africa.** ❖ Presence of raw materials. ❖ Improved peace and security. ❖ Availability of capital. ❖ Presence of energy sources. ❖ Presence of cheap labour force provided by a large population. ❖ Availability of large market for industrial goods.				

		Contributions of industries to South Africa's development. ❖ Industries provide job opportunities to people. ❖ They promote the development of towns. ❖ Exported industrial goods earn foreign exchange. ❖ Industries encourage agricultural production. ❖ They provide goods to people at cheap prices				
38	✓ LIBYA ✓ DRC	**LIBYA.** **The location of Libya** Libya is the leading exporter of oil in Africa. Most of the oil fields in Libya are found in the North. These oil fields are linked to the refineries and ports by pipelines. Libya's oil is exported to Europe where it attracts a large market because of the short distance across the Mediterranean Sea. **Reasons why Libya's oil is on high demand.** ❖ Libya's oil has less impurities (is of high quality) which makes it not to pollute the environment so much when burnt. ❖ Libya is nearer to Europe which makes it cheaper to transport her oil to the European buyers. Contributions of Oil mining to Libya's development. ❖ It has created job opportunities to people in Libya. ❖ It has promoted the development of industries in Libya. ❖ It has attracted many foreign investors to the country. ❖ It has promoted the development of infrastructure e.g. the Great manmade river called the Seven Wonders of the World. ❖ Oil exports earn the county foreign exchange.	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand mining in Libya and DRC**	**Giving Reasons why Libya's oil is on high demand.** **mentioning the factors that have promoted the development of the Mining industry in DRC** **Identifying Contributions of the Mining industry to the economic development of DRC**	**economic activities** **peoples welfare.**

		❖ The people of Libya enjoy cheap fuel from their nation. ❖ Oil revenues are used to improve social services like building of schools, hospitals and modern estates. **Note:** **Most people in Libya live in the Northern part of the Libya along the coast because;** ➢ There are many job opportunities due to oil mining. ➢ Presence of the Mediterranean sea which promotes fishing. ➢ The Northern part experiences Mediterranean climate which promotes farming. ➢ There are many trade opportunities since it is near Europe. ➢ There are better social services because of the presence of the capital city. **CROP FARMING IN LIBYA.** Crop farming in Libya is done under irrigation because the country receives very little rainfall. The government of Libya constructed the Great manmade river called the Seven Wonders of the World to supply water from the Mediterranean sea to different parts of the country. It was built to provide water for use in irrigation and in industrial projects. The Great manmade river also provides water for domestic use to the people of Libya. This river enabled the country to achieve the objective of the Green revolution. **Some crops grown in Libya.** ❖ Oranges ❖ Dates ❖ Maize ❖ Lemons ❖ Tomatoes ❖ Onions **Note:** ➢ Green Revolution was a plan aimed at changing the desert country into an agricultural country that would be able to produce its own food. ➢ Sand dunes and oases are the major tourist attractions in Libya.				

		DEMOCRATIC REPUBLIC OF CONGO **Major economic activities** Mining Lumbering Crop Cultivation. The Location of Democratic Republic of Congo. **THE MINING INDUSTRY IN DRC.** The economy of DRC largely depends on mining. DRC is the leading producer of diamonds in the world. The chief mining area in DRC is the Katanga province (formerly known as Shaba province). Lubumbashi and Kolwezi are the most important towns in Katanga region. Diamond mines are supplied with electricity from Inga and Nzilo dams on river Congo. **Other minerals mined in DRC include;** • Copper • Zinc • Coal • Cobalt • Crude oil • Tin • Uranium • Lead Note: -Copper in DRC is mined in Katanga region. Copper deposits in this region cover a large area which extends into Zambia to form the Zambia copper belt. **Factors that have promoted the development of the Mining industry in DRC.** ❖ Presence of a variety of minerals. ❖ Presence of both skilled and unskilled labour force. ❖ Availability of power generated from river Congo. ❖ The improvement in air transport in the country. ❖ Availability of capital provided by foreign investors. **Contributions of the Mining industry to the economic development of DRC ❖** Minerals are used as raw materials for industries.				

		❖ It has created employment opportunities to people of DRC ❖ It has promoted the development of infrastructure like roads. ❖ It has promoted the development of towns. ❖ Mineral exports earn DRC foreign exchange. ❖ It has attracted many foreign investors in DRC **Problems facing the Mining industry in DRC.** ❖ Political instability in the country. ❖ Poor ground transport system. ❖ High levels of poverty among the natives. ❖ Shortage of skilled labour force. **Note:-Ground transport in DRC is very poor due to;** ➢ The presence of many thick forests which hinder road construction. ➢ The presence of many rivers which make construction of bridges very expensive. ➢ The heavy rainfall received making the soil soggy. ➢ Destruction of existing roads due to civil wars. Water transport is common in DRC because DRC has many rivers. -Road transport can be made possible across rivers by constructing bridges **LUMBERING IN DRC** Lumbering is the felling of mature trees for production of timber Lumbering is one of the major economic carried out in DRC because DRC has many thick forests. **Factors that have contributed to the development of Lumbering industry in DRC** ❖ Presence of many forests. ❖ Increased foreign investment. ❖ Availability of capital invested in the lumbering industry. Problems facing Lumbering industry in DRC ❖ Internal conflicts (civil wars)				

		❖ Poor ground transport. ❖ Illegal extraction of wood. **AGRICULTURE IN DRC** Agriculture is one of the major economic activities carried out in DRC It is divided into subsistence and commercial farming (plantation farming) Subsistence farmers mainly produce cassava, potatoes, pineapples, maize, yams, and rice. Commercial farmers mainly produce coffee, rubber, oil palm, cocoa, tea Coffee is the leading crop export of DRC Robusta coffee is more grown in DRC than Arabica coffee Coffee is mostly exported to Italy, France, Belgium and Switzerland. Rubber growing in DRC Rubber is grown for latex production. Latex is the thick white liquid produced by rubber trees. **Products got from latex.** Car tyres Erasers Balls Shoe soles Elastic bands Gum boots Gloves Condoms **Factors that favour Rubber growing in DRC.** ❖ Presence of heavy rainfall. ❖ Deep well drained fertile soils ❖ High temperatures throughout the year. **SUDAN .** **Major economic developments** Gezira irrigation scheme Industrial development Hydro-electric power generation Major HEP dams Sennar dam along the Blue Nile. Roseires dam on Blue Nile. Jabel Aulia dam along the White Nile.				

39	✓ SUDAN ✓ Uganda	**SUDAN .** **Major economic developments** Gezira irrigation scheme Industrial development Hydro-electric power generation Major HEP dams Sennar dam along the Blue Nile. Roseires dam on Blue Nile. Jabel Aulia dam along the White Nile. The Location of Sudan **IRRIGATION FARMING IN SUDAN.** Irrigation is the artificial supply of water on land to support crop growth. Irrigation farming is the system of crop growing in which land is supplied with water by artificial means to support crop growth. Irrigation scheme is an area of land which is supplied with water by human means to support crop growth. **Major irrigation schemes in Sudan**. • Gezira irrigation scheme • Managil irrigation scheme • Kenana irrigation scheme. **THE GEZIRA IRRIGATION SCHEME.** Gezira irrigation scheme is the largest irrigation scheme in Africa. It is found between the Blue Nile and the White Nile. Gezira produces 75% of Sudan's cotton. Managil and Kenana are the two extensions to the Gezira. Cotton is the major crop grown in Managil irrigation scheme while sugarcane is the main crop grown in Kenana. **The scheme is managed by Gezira management board (Sudan Gezira board).** All land belongs to the board and is only rented out to tenant workers. **Importance of the Gezira Management Board.** It controls water supply on the scheme. It ploughs land on the scheme. It trains workers on proper farming methods	**guided group discussion** **brain storming** **guided discovery** **guided discussion** **think pair share method.**	**To enable the learner understand the major economic developmen t in Uganda and Sudan**	**Giving the Major irrigation schemes in Sudan** **mentioning the Major non-traditional cash crops grown in Uganda** **stating the Problems facing Agriculture in Uganda** **identifying the Possible solutions to the problems affecting Economic developments in Africa.**	

		The work of the tenants on the scheme. It provides seeds and fertilizers to the tenants. It buys and markets cotton produce. They plant, weed, spray and harvest cotton. They remove plant residue from the scheme. Methods of irrigation used on the Gezira. They clear channels for irrigation. Overhead sprinkler irrigation method Gravity flow method NB: -Gravity flow method is commonly used on the scheme. **Factors that favoured the establishment of Gezira.** ❖ Presence of the Blue Nile which supplies water for irrigation. ❖ Availability of a large sparsely populated land. ❖ Availability of capital from the government. ❖ Availability of gently sloping land which favours agricultural mechanisation and the use of gravity flow method of irrigation. ❖ Availability of both skilled and unskilled labour force. **Benefits of the Gezira irrigation scheme.** ❖ It has created job opportunities to the people in Sudan. ❖ It has promoted the development of towns. ❖ It has promoted the development of roads and railways. ❖ It has led to the development of industries.eg.ginneries. ❖ It is a source of income to the Sudanese government. Note: -A railway line was built on Gezira irrigation scheme to ease transportation of cotton to the processing industries in Sudan. -Sennar dam supplies hydroelectricity on Gezira irrigation scheme. **Problems faced at the Gezira scheme.** ❖ Outbreak of cotton pests and diseases.				

		❖ Limited capital to run activities on the scheme effectively. ❖ Land fragmentation ❖ Fluctuation of cotton prices on the world market. ❖ Competition from other cotton producers. ❖ Shortage of labour especially during the harvesting period. **Possible solutions to the problems facing Gezira irrigation scheme.** ❖ Regular spraying should be done to control pests and diseases. ❖ The management should get loans from financial institutions. ❖ Tenants should be allowed to own their plots. ❖ By employing more skilled labour force on the scheme. **Main economic activities** Crop cultivation Fishing Pastoralism Tourism Mining **The Location of Uganda** **AGRICULTURE IN UGANDA** Agriculture is the growing of crops and rearing of animals. Agriculture is the back bone of Uganda's economy because it employs the biggest population hence the main source of income to Ugandans. **Major non- traditional cash crops grown in Uganda;** Beans Millet Sweet potatoes, Sorghum Maize Peas				

		Major traditional cash crops grown in Uganda; • Ground nuts • Coffee • Tea • Oil palm •Cotton • Tobacco •Sugarcane • Cocoa **Note;** ➢ Traditional cash crops are crops that were originally grown for sale while Non-traditional cash crops are crops that were originally grown for food but can now be sold. ➢ Coffee is the chief cash crop grown in Uganda ➢ Arabica coffee is commonly grown in highland areas with low temperatures while Robusta coffee is grown in low lands with high temperatures. **Contributions of Agriculture to Uganda's economy** ❖ It has created job opportunities to many people. ❖ It has promoted the development of roads and railways. ❖ Source of raw material to agro-based industries. ❖ It is a steady source of food to Ugandan people. ❖ Agricultural exports earn the country foreign exchange **Problems facing Agriculture in Uganda** ❖ Outbreak of crop pests and diseases ❖ Poor transport and communication in some parts of Uganda. ❖ Shortage of capital to invest in the agricultural industry ❖ Shortage of land due to increasing population				

		❖ Rural urban migration which leads to shortage of labour force on farms in rural areas ❖ Price fluctuations of agricultural products. ❖ Prolonged drought **Possible solutions to the problems facing the Agricultural sector in Uganda** ❖ By teaching farmers better farming methods. ❖ The government should provide quick maturing seeds to farmers ❖ The government should provide small scale loans to farmers ❖ By spraying the crops using pesticides ❖ The government should develop feeder roads that connect to main roads **TOURISM INDUSTRY IN UGANDA** Tourism is one of the major developed sectors in Uganda's economy. **Major tourist attractions in Uganda;** •Wild life • Climate • Cultural sites •Physical features • Vegetation **Factors that have promoted the development of the Tourism in Africa.** ❖ Presence of various tourist attractions in most parts of Uganda. ❖ Improved transport and communication network. ❖ Political stability in most parts of Uganda. ❖ Availability of better accommodation facilities in Africa. ❖ Hospitality of Ugandans to the tourists **Contributions of the Tourism industry to the development of Uganda.** ❖ It creates job opportunities to people. ❖ It promotes the development of infrastructure like roads, lodges, hotels. ❖ It promotes international relationship. ❖ It creates market for locally manufactured goods.				

		❖ It is a source of revenue to the government. **Problems facing the Tourism industry in Uganda.** ❖ Poor transport and communication network. ❖ Poor accommodation facilities. ❖ Shortage of funds to promote the tourism industry. ❖ Limited tourist attractions in some parts of Uganda. ❖ Limited advertisement of tourist attractions on international media. **Possible solutions to the problems facing Uganda's Tourism industry** ❖ By enforcing laws against poaching. ❖ By constructing better roads in all parts of Uganda. ❖ By advertising Uganda's tourist attractions on international media. ❖ By importing new species of wildlife in Uganda. ❖ By training more game wardens. ❖ By building better accommodation facilities in different parts of Uganda. ❖ By gazetting more wildlife conservation areas. **CHALLENGES AFFECTING ECONOMIC DEVELOPMENTS IN AFRICA**. Illiteracy Poverty Ignorance Diseases Poor transport and communication Low level of technology High dependency ratio. Unemployment Civil wars and coups Violation of human rights High number of refugees Foreign domination Dictatorship High infant and maternal mortality rate				

		Teenage pregnancies and early marriages. Famine Corruption Brain drain Economic collapse **Possible solutions to the problems affecting Economic developments in Africa.** ❖ By promoting good governance in all African countries. ❖ By mechanising agriculture. ❖ By promoting unity among the people of Africa. ❖ By promoting human rights. ❖ By promoting women emancipation. ❖ By introducing universal education in all African countries. ❖ By enforcing laws against corruption. ❖ By improving health services in all African countries. ❖ By modernising infrastructure like roads, industries. **Note** -Women emancipation refers to giving women freedom to gain access and control of all forms of resources. -Women emancipation makes women free from old social limitations and customs that denied them power in the society. -The status of women can be raised through equal opportunities in education, politics, employment, ownership of property and active participation in family planning. **How women emancipation can be promoted** ➢ Promoting girl child education ➢ Abandoning cultural beliefs which discriminate women ➢ Discouraging early marriages among girls **(a) Political challenges affecting Economic developments in Africa.** 1. Dictatorship				

		This is a political system where a leader misuses power and does not rule according to the principles of democracy. **Indicators of dictatorship** ❖ People in the country have no freedom of speech, movement and expression. ❖ Innocent people are imprisoned without court trial. ❖ Political opponents are tortured or killed. ❖ Leaders rule according to their wishes. ❖ Free and fair elections are not regularly conducted. **2. Military coups.** This is a sudden attempt by the army to take control of the government by violence. **Causes of coups in Africa.** •Dictatorship • Unfair elections • Bad governance • Denial of human rights. **How coups can be reduced.** ❖ By promoting good governance. ❖ By organising regular free and fair elections in the country. ❖ Leaders should have respect for human rights. ❖ Leaders should listen to people's problems and solve them. **3.Civil wars** This is a war that is fought between citizens of the same country. African countries that have experienced civil wars. Somalia south Sudan **Causes of civil wars.** • Democratic Republic of Congo. Greed for power. Opposition against bad governance. Dangers of civil wars. • Dictatorship. They lead to destruction of property.				

		They led to decline in local trade. They lead to loss of lives. **How African countries can reduce civil wars.** ❖ They discourage the coming of foreign investors in the country. By promoting peace and security in the country. By holding peace talks. ❖ By using diplomacy to end disagreements. ❖ By signing peace agreements. **4. Refugee problems** A refugee is a person who is forced to leave his / her country because of a disaster or persecution. An internally displaced person is a person who is forced to leave his / her home for the same reasons as a refugee but remains in his / her own country. **Causes of refugees in Africa.** •Civil wars. • Religious persecution. • Natural disasters International organisations that care for refugees •United Nations High Commissioner for Refugees (UNHCR) • World Food programme (WFP) • World Health Organisation (WHO) Problems faced by refugees ❖Poverty ❖ Easy spread of diseases due to overcrowding. ❖Unemployment ❖ Shortage of medical facilities. ❖ Shortage of food and clean water. **Ways how refugee problems can be solved.** ❖By improving on security. ❖ By using peaceful means to solve political difference ❖ By promoting rule of law. **5. Foreign domination** Foreign aid refers to the assistance which African countries receive from other countries				

		It includes; multilateral aid (aid given by international organisation like IMF, World bank, UN agencies), bilateral aid (aid given by a donor country), relief aid (aid given after disasters) **Forms of foreign aid** •Loans • Donations •Grants • Skilled people (expatriates) **How African countries can reduce foreign domination.** ❖ Exporting processed good instead of raw materials ❖ Increasing agriculture production ❖ Widening the tax base to increase source of income ❖ Training more skilled workers. **(b) Economic challenges affecting Economic developments in Africa.** **6. Under development** It refers to the state when a country is unable to improve the quality of life of its people. **Causes of under development in African countries.** • Political instability • Shortage of funds to provide social services. • Low production levels **7. Corruption** It is an act where one uses his or her position of responsibility for dishonest gains. **Forms of corruption** ❖ Asking for bribes ❖ Paying for goods which have not been delivered ❖ Paying salaries to non-existent workers ❖ Taking public funds for personal use ❖ Paying more money than actual money that had to be spent **Dangers of corruption.** ❖ It leads to inefficiency in government departments				

		❖ It leads to loss govern revenue ❖ It discourages foreign investors ❖ It makes it difficult for people to access social services **Ways through which corruption can be controlled.** ❖ By enforcing strict laws against corruption ❖ By paying attractive salaries to workers ❖ By teaching people about the dangers of corruption **Bodies that were established to check on corruption in Uganda** ❖ The office of the Inspector General of Government (IGG) ❖ The Public Accounts Committee of the parliament ❖ Ministry of Ethics and Integrity Note: ➢ Special Revenue Protection Services (SRPS) is the body that was set up by URA to control smuggling in Uganda. ➢ URA is the body responsible for collecting taxes in Uganda. ➢ Taxation is the major source of government revenue in Uganda. ➢ Other sources of government revenue include: grants, loans, donations, tourism industry, airport charges, court fines and traffic fines, licences, sale of minerals. **8. Economic collapse** This is when the economy of the country does not sustain the needs of people **Indicators of economic collapse** • Unemployment • Shortage of essential commodities • Decline in the value of the national currency • Limited investments • Inflation (general and progressive increase in prices) **9. Brain drain**				

		Brain drain is the movement of highly trained people (skilled labour) from their country to go and work in another country. E.g. Engineers, teachers, doctors. It is the movement of professionals to other countries looking for better paying jobs. ❖ Such people are usually attracted by better pay and other good working conditions. ❖ African countries lose skilled people who would have contributed towards provision of social services and production of goods. ❖ They also lose taxes they would have collected from such people. ❖ The governments also lose what was invested in them during their training. **(c) Social challenges affecting Economic developments in Africa**. **10. Famine** It is a large-scale shortage of food lasting for a long time in an area. **Causes of famine** •Civil wars and conflicts • Poor agricultural methods •Prolonged drought • Poor storage facilities •Rural urban migration • Putting much emphasis on production of cash crops than food crops •Outbreak of crop pests and diseases. **Dangers of famine** ❖ It leads to death of people ❖ It Increases dependence on foreign aid **Ways of controlling famine.** ❖ By mechanising agriculture ❖ By encouraging farmers to use modern farming methods ❖ By promoting peace and stability in the country ❖ By planting high yielding seeds to increase food production				

		❖ By encouraging the growing of more food crops than cash crops **11. Low life expectancy** Life expectancy refers to how long in terms of years people in a country are expected to live. Most African countries have low life expectancy **Causes of low life expectancy in Africa** Poor feeding High levels of poverty **Ways of increasing life expectancy** Poor medical services Limited access to clean and safe water. Having proper nutrition Creating more job opportunities By providing clean and safe water By providing education services **12. High infant and maternal mortality rate** **Mortality rate is the rate at which people die** Infant mortality rate is the rate at which babies die while maternal mortality rate is the rate at which pregnant mothers die during delivery. **Causes of high infant and maternal mortality rate.** • Lack of immunisation services • Poor medical services • Poor sanitation • Poor feeding **13. Illiteracy** Illiteracy is the state when people in a country cannot read and write with understanding Causes of high levels of illiteracy in Africa Shortage of funds to invest in education Ignorance among people • Social injustice where girls are denied education **How illiteracy can be controlled** ❖ By introducing universal education programmes eg: UPE, USE ❖ Government should introduce adult literacy programs ❖ By constructing more schools in the country				

		❖ Laws should be put in place to make primary education compulsory ❖ By educating parents on the importance of education Note: -The government of Uganda introduced the Alternative Basic Education for Karamoja (ABEK) to reduce the high levels of illiteracy among the Karimojongs. **14. Poor social service delivery.** Social services are services provided to improve people's welfare. Such services include; Education, security, communication, banking, transport etc **Problems faced in providing social services.** ❖ Shortage of funds ❖ High population. ❖ Poor transport network. ❖ Insecurity in some areas ❖ Corruption ❖ Shortage of skilled labour
